Medication List

Medication List

This report is for documentation purposes only. The patient should not follow medication instructions within. For accurate instructions regarding medications, the patient should instead consult their physician or after visit summary.

Prior To Admission

fluticasone (Flonase) 50 MCG/ACT nasal spray

Instructions: Administer 1 spray into each nostril in the morning. Shake gently. Before first use, prime pump. After use, clean tip and replace cap.
Authorized by: Stephanie Marie Noel, PA
Ordered on: 8/20/2024
Start date: 8/20/2024
Quantity: 16 g
Refill: 12 refills by 8/20/2025

ibuprofen (Childrens Motrin) 100 MG/5ML suspension

Instructions: Shake well. Take 6.4 mL by mouth every 6 hours. For use after surgery. Rotate with Tylenol every 3 hours.
Authorized by: Vikram Ramjee, MD
Ordered on: 12/9/2024
Start date: 12/16/2024
End date: 12/30/2024
Quantity: 120 mL
Refill: 1 refill by 12/9/2025

Adenoidectomy and Microlaryngoscopy Discharge Instructions

Clinical Notes (continued)

Diet:
• There are no dietary restrictions.

Activity:
• There are no activity restrictions.
• Your child may return to school or daycare within a few days of surgery, based on whether your child needs to continue using pain medication.

Discharge Medications:
• Continue all medications on Medication Reconciliation form per original prescribing physician
• See Medication Reconciliation form for new or changed medications. The following medications except for saline have been called in to the OU Children's Pharmacy on the 2nd floor of the Children's Hospital near the main entrance.
• Use **saline spray** in both nostrils three times daily for 2 weeks.
• Take **acetaminophen (Tylenol)** and **ibuprofen (Motrin)** as needed for pain or fever. Both medications can be given every 6 hours. It is usually best for the first few days to alternate these and provide one or the other every 3 hours.
• Your discharge nurse should help you with weight-based dosing for both Tylenol and Motrin for your child before you discharge home.

Things to remember:
• Ear pain after surgery is common, and is likely to resolve as any throat pain gets better.
• Your child is likely to have foul smelling breath for 2-3 weeks.
• If you are worried about your child's fluid intake, monitor their urine output closely. Signs that your child is not taking enough fluids are a decreased frequency of urination, dark yellow or even brown colored urine, and dry mouth.
• Fever can occur after adenoidectomy. If so, continue treating with tylenol and ibuprofen, and encourage fluid intake. However, for fevers over 101.4F, go to the nearest emergency department.
• Call 911 or go to the nearest emergency department for: any bleeding from the mouth or nose, concern for dehydration, high fevers, significant difficulty breathing, neck stiffness, lethargy, or anything else you think may be an emergency.
• For any questions or concerns, you may call the pediatric ENT office at OU Children's at **405-271-2662** during business hours. For after hours or weekend concerns, you may call the main hospital phone number at **405-271-8001** and ask to speak to the ENT physician on call.

Follow-up:
• 1/22/2025 as scheduled

Anesthesia: General
Estimated Blood Loss: Minimal
Total IV Fluids: 100 mL
Total Urine Output: None
Drains: * None in log *
Staff:
Circulator: Tierra M Sparks, RN
Scrub Person: Gregory Deon Brown

Indications: Parker L Phillips is an 2 y.o. male who is having surgery for Hypertrophy of adenoids [J35.2] Dysphagia [R13.10]. The risks and benefits of performing a microdirect laryngoscopy and bronchoscopy were discussed in detail and his family wished to proceed. Informed consent was obtained. The details of surgery and risks including pain, scarring, bleeding, infection, and velopharyngeal dysfunction were discussed with his family who agrees to proceed.

Procedure Details:
The patient was seen in the preoperative area. The risks, benefits, complications, treatment options, non-operative alternatives, expected recovery and outcomes were discussed with the patient. The possibilities of reaction to medication, pulmonary aspiration, injury to surrounding structures, bleeding, recurrent infection, the need for additional procedures, failure to diagnose a condition, and creating a complication requiring transfusion or operation were discussed with the patient. The patient concurred with the proposed plan, giving informed consent. The site of surgery was properly noted/marked if necessary per policy. The patient has been actively warmed in preoperative area. Preoperative antibiotics are not indicated. Venous thrombosis prophylaxis are not indicated.

Description of procedure: The patient was transported to the operating room. Patient identification and the procedure were confirmed according to institutional protocol. He was transferred to the operating table in the supine position. Care was transitioned to Anesthesiology for induction of general anesthesia, which occurred without incident. The eyes were taped and padded. A preoperative safety timeout was performed according to institutional protocol. The table was turned 90 degrees to the right and the patient was mask ventilated.

A tooth guard was placed to protect the maxillary dentition. A Parsons 2 laryngoscope was carefully inserted into the mouth and advanced into the vallecula, resulting in a Grade 1 view. 1% lidocaine was applied as topical laryngotracheal anesthesia by ENT. Microdirect laryngoscopy was performed including a microscopic examination of the oropharynx, hypopharynx, supraglottis, and glottis using a 4 mm 0-degree endoscope. Rigid bronchoscopy was then performed including a microscopic examination of the subglottis, trachea, mainstem bronchi, and secondary bronchi using a 4 mm 0-degree endoscope. This examination was significant for the below listed findings. The patient was placed into suspension and using a 90 degree probe a deep interarytenoid groove was noted and injected with 0.2 mL Prolaryn gel with good ablation noted. The patient was then intubated by the ENT team with a 4.0 cuffed ETT. Photodocumentation was obtained. The endoscope and tooth guard were carefully removed. The teeth were inspected and there was no evidence of dental injury.

The Crowe-Davis mouth retractor placed in the oral cavity. The palate was palpated with no evidence of a submucous cleft palate. A Foley catheter was placed for retraction of the palate and uvula. A laryngeal mirror was used to visualize the adenoids, and an adenoidectomy was performed using the Coblator. The nasopharynx and oropharynx were irrigated with saline, and an orogastric tube placed for removal of stomach and pharyngeal contents.

Care was transitioned to Anesthesiology for emergence from general anesthesia, which occurred in the operating room without incident. The patient tolerated the procedure well and there were no complications. He was transported to PACU in stable condition.

Dr. Vikram Ramjee was present and participated in the entirety of the procedure.

Findings:
Laryngeal Exposure:
1. Exposure of Larynx: Parsons 2, grade 1 view
2. Patient position and/or special maneuvers: shoulder roll

Findings:
1. Supraglottis: Normal
2. Glottis: Normal, deep interarytenoid groove noted and injected with 0.2 mL Prolaryn gel
3. Subglottis: Easily fit 4.0 cuffed ETT with leak present at 20 cm H2O
4. Upper trachea: Normal
5. Mid-trachea: Normal
6. Lower trachea: Normal

General Anesthesia, Pediatric, Care After

The following information offers guidance on how to care for your child after the procedure. Your child's health care provider may also give you more specific instructions. If you have problems or questions, contact your child's health care provider.

What can I expect after the procedure?

After the procedure, it is common for children to have:

- Pain or discomfort at the IV site.
- Nausea or vomiting.
- A sore throat or hoarse voice.
- Trouble sleeping.

Your child may also feel:

- Dizzy.
- Weak.
- Sleepy.
- Irritable.
- Cold.

Babies may briefly have trouble nursing or taking a bottle. Older children who are potty-trained may briefly wet the bed at night.

Follow these instructions at home:

Medicines

- Give over-the-counter and prescription medicines only as told by your child's health care provider. These include any sleeping pills or medicines that cause drowsiness.
- **Do not** give your child aspirin because of the association with Reye's syndrome.

Eating and drinking

Go back to your child's regular diet and feedings as told by your child's health care provider and as tolerated by your child. In general, it is best to:

- Start by giving your child only clear liquids.
- Give your child frequent small meals when your child starts to feel hungry.
- Have your child eat foods that are soft and easy to eat, such as toast. Slowly have your child return to their regular diet.
- Breastfeed or bottle-feed your baby or young child. Do this in small amounts. Slowly increase the amount.

Give your child enough fluid to keep their urine pale yellow.

If your child vomits, replace body fluid that has been lost (**rehydrate**) by giving water or clear juice.

Safety

Your child should rest as told by the health care provider.

For the time period you were told by the health care provider:

- **Do not** allow your child to participate in activities where they could fall or become injured.
- **Do not** allow an older child to drive or use machinery.
- **Do not** allow your child to drink alcohol.
- **Do not** allow your child to take sleeping pills or medicines that cause drowsiness.

Watch your child closely until your child is awake and alert.

Help your child with:

- Standing.
- Walking.
- Going to the bathroom.
- Supervise any play or activity.

General instructions

Your health care provider may check to make sure that your child can walk, drink, and urinate before your child will go home.

Have your child return to normal activities as told by the health care provider. Ask the health care provider what activities are safe for your child.

If your child has sleep apnea, surgery and certain medicines can increase the risk for breathing problems. If applicable, follow instructions from the health care provider about having your child use a sleep device:

- Anytime your child is sleeping, including during daytime naps.
- While your child is taking prescription pain medicines or medicines that make your child drowsy.

Do not allow your child to use any products that contain nicotine or tobacco. These can delay incision healing after surgery. These products include cigarettes, chewing tobacco, and vaping devices, such as e-cigarettes. If your child needs help quitting, ask a health care provider.

Do not smoke around your child.

Contact a health care provider if:

Your child has nausea or vomiting that does not get better with medicine.

Your child vomits every time they eat or drink.

Your child has pain that does not get better with medicine.

Your child cannot urinate or has bloody urine.

Your child develops a skin rash.

Your child has a fever.

Get help right away if:

Your child:

- Has trouble breathing or speaking.
- Makes high-pitched whistling sounds when they breathe, most often when they breathe out (**wheeze**).

Your child who is 3 months to 3 years old has a temperature of 102.2°F (39°C) or higher.

Your child who is younger than 3 months has a temperature of 100.4°F (38°C) or higher.

These symptoms may be an emergency. Do not wait to see if the symptoms will go away. Get help right away. Call 911.

Summary

After the procedure, it is common for a child to have nausea or a sore throat. It is also common for a child to feel sleepy.

Watch your child closely until your child is awake and alert.

Give your child enough fluid to keep their urine pale yellow.

Have your child return to normal activities as told by the health care provider. Ask the health care provider what activities are safe for your child.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

Flexible Bronchoscopy, Care After

After flexible bronchoscopy, it is common to have a cough that is worse than it was before the procedure for 24–48 hours. Also during this time it is common to have:

- A low-grade fever.
- A sore throat or hoarse voice.
- Some blood in the mucus from your lungs (**sputum**), if a biopsy was done.

Follow these instructions at home:

The instructions below may help you care for yourself at home. Your health care provider may give you more instructions. If you have questions, ask your health care provider.

Eating and drinking

- **Do not** eat or drink (not even water) for 2 hours after your test, or until your numbing medicine (**local anesthetic**) wears off. If you have a numb throat, the risk of burning yourself or choking is higher.
- Start eating soft foods and slowly drinking liquids after your numbness is gone and your cough and gag reflexes have returned.
- You may return to your normal diet the day after the procedure.

Driving

- If you were given a sedative during the procedure, it can affect you for several hours. **Do not** drive or operate machinery until your health care provider says that it is safe.
- Ask your health care provider if the medicine prescribed to you requires you to avoid driving or using machinery.

General instructions

- Take over-the-counter and prescription medicines only as told by your health care provider.
- Return to your normal activities as told by your health care provider. Ask your health care provider what activities are safe for you.
- **Do not** smoke or use any products that contain nicotine or tobacco. If you need help quitting, ask your health care provider.
- Keep all follow-up visits. This is important. It is very important if you had a tissue sample (**biopsy**) taken.

Contact a health care provider if:

- You have a fever.

Get help right away if:

You have shortness of breath that gets worse.

You get light-headed.

You feel like you are going to pass out (**faint**).

You have chest pain.

You cough up more than a small amount of blood.

These symptoms may be an emergency. Get help right away. Call 911.

Do not wait to see if the symptoms will go away.

Do not drive yourself to the hospital.

Summary

Do not eat or drink anything (not even water) for 2 hours after your test, or until your numbing medicine wears off.

Do not smoke or use any products that contain nicotine or tobacco. If you need help quitting, ask your health care provider.

Get help right away if you have chest pain.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

Chief Complaint
PCP **- Derek Landis, MD**
No chief complaint on file.

History Of Present Illness
Parker L Phillips is a 2 y.o. male presenting for SMLB with possible intervention and injection, adenoidectomy.

Past Medical History
He has no past medical history on file.

Surgical History
He has no past surgical history on file.

Family History
No family history on file.

Social History
He reports that he has never smoked. He has never used smokeless tobacco. He reports that he does not drink alcohol and does not use drugs.

Allergies
Patient has no known allergies.

Review of Systems
Negative except as above.

Physical Exam
Constitutional: Well-developed, well nourished
Communication: Normal vocal quality
Head: Normocephalic, atraumatic
Face: No sinus tenderness, salivary glands normal to palpation, normal facial strength
Eyes: Pupils equal, extraocular movements intact, normal alignment
Ears: external ears normal, hearing intact to conversational volume
Nose: No external evidence of trauma, external exam midline, No septal deviation, and No rhinorrhea
Mouth/Throat: tonsils 1+, dentition appropriate for age
Neck: no thyromegaly or neck mass
Lymphatic: no cervical lymphadenopathy
Respiratory: non-labored respirations, no stridor, no retractions
Cardiovascular: no peripheral edema or cyanosis
Neurologic: CNII-XII intact
Chest: Breath sounds clear

Last Recorded Vitals

H&P Notes (continued)

Blood pressure **(!) 94/79**, pulse 130, temperature 36.1 °C (97 °F), resp. rate 22, height 0.91 m (2' 11.83"), weight 12.5 kg (27 lb 10.7 oz), SpO2 98%.

Assessment/Plan

2 y.o. male presenting for SMLB with possible intervention and injection, adenoidectomy.

- Proceed to OR.

Anesthesia (within normal limits)

Cardio (within normal limits)
ECHO on 2/16/22 showed structurally normal heart with small PFO.

Development
PT, OT, speech therapies
(+) Term birth of infant (NICU 12 days for HIE
Delivery was induced 2/8/22 due to prolonged labor with meconium stained amniotic fluid appreciated on delivery. He had low APGARs of 2, 6, and 7 and spells of apnea and leg twitching)

Endo (within normal limits)

GI/Hepatic
(+) Dysphagia (He had a dysphagiagram on 9/17/24 which showed trace silent aspiration of pudding bolus but was difficult attribute this to true dysphagia vs irritability. Per MOC, he aspirates daily on saliva but does not have induced apneic episodes.)

GU/Renal (within normal limits)

Hematology (within normal limits)

Pulmonary (within normal limits)
(-) Recent URI (denies)

Eyes, Ears, Nose, and Throat
5/2/24 sleep study No evidence of clinically significant sleep apnea on this polysomnography
(+) Snoring (nightly snoring and mouth-breathing)

Nervous
(+) Developmental delay
(+) Hypoxic-ischemic encephalopathy, unspecified severity (with neonatal seizures. He has had no further seizures since discharge.)

Infectious/Inflammatory
(+) Chronic rhinitis

Other
(+) Nasal obstruction

Clinical information reviewed:
Tobacco | Allergies | Meds | Problems | Med Hx | Surg Hx | Fam Hx |

2/16/22 ECHO
Summary:
1. Patent foramen ovale, small with a left to right interatrial shunt.
2. Trivial tricuspid valve insufficiency.
3. Trivial mitral valve insufficiency.
4. No patent ductus arteriosus.
5. Normal right ventricular cavity size and systolic function.
6. Normal left ventricular cavity size and systolic function.

PHYSICAL EXAM:
Physical Exam
Cardiovascular: Regular rhythm. Normal rate. No murmur heard.

Neurological:
He has alert, awake and developmentally delayed.
Pulmonary: He has transmitted upper airway sounds (coarse upper airway noise).

Airway: Mallampati class: II. Thyromental distance: TMD less than 6 cm. Mouth opening: Less than 3 cm mouth

opening. Neck range of motion: full.

Dental: unable to assess

ANESTHESIA PLAN:
Anesthesia Plan
ASA 2

general
(TIVA then ETT)
inhalational induction
Premedication planned: acetaminophen and midazolam
Anesthetic plan and risks discussed with father and mother.

Chief Complaint
PCP **- Derek Landis, MD**
No chief complaint on file.

History Of Present Illness
Parker L Phillips is a 2 y.o. male presenting for SMLB with possible intervention and injection, adenoidectomy.

Past Medical History
He has no past medical history on file.

Surgical History
He has no past surgical history on file.

Family History
No family history on file.

Social History
He reports that he has never smoked. He has never used smokeless tobacco. He reports that he does not drink alcohol and does not use drugs.

Allergies
Patient has no known allergies.

Review of Systems
Negative except as above.

Physical Exam
Constitutional: Well-developed, well nourished
Communication: Normal vocal quality
Head: Normocephalic, atraumatic
Face: No sinus tenderness, salivary glands normal to palpation, normal facial strength
Eyes: Pupils equal, extraocular movements intact, normal alignment
Ears: external ears normal, hearing intact to conversational volume
Nose: No external evidence of trauma, external exam midline, No septal deviation, and No rhinorrhea
Mouth/Throat: tonsils 1+, dentition appropriate for age
Neck: no thyromegaly or neck mass
Lymphatic: no cervical lymphadenopathy
Respiratory: non-labored respirations, no stridor, no retractions
Cardiovascular: no peripheral edema or cyanosis
Neurologic: CNII-XII intact
Chest: Breath sounds clear

Last Recorded Vitals
Blood pressure **(!) 94/79**, pulse 130, temperature 36.1 °C (97 °F), resp. rate 22, height 0.91 m (2' 11.83"), weight 12.5 kg (27 lb 10.7 oz), SpO2 98%.

Assessment/Plan
2 y.o. male presenting for SMLB with possible intervention and injection, adenoidectomy.

- Proceed to OR.

* Raquel Querido - Resident - Assisting

Procedure Summary

Anesthesia: General
Estimated Blood Loss: Minimal
Total IV Fluids: 100 mL
Total Urine Output: None
Drains: * None in log *
Staff:
Circulator: Tierra M Sparks, RN
Scrub Person: Gregory Deon Brown

Indications: Parker L Phillips is an 2 y.o. male who is having surgery for Hypertrophy of adenoids [J35.2] Dysphagia [R13.10]. The risks and benefits of performing a microdirect laryngoscopy and bronchoscopy were discussed in detail and his family wished to proceed. Informed consent was obtained. The details of surgery and risks including pain, scarring, bleeding, infection, and velopharyngeal dysfunction were discussed with his family who agrees to proceed.

Procedure Details:
The patient was seen in the preoperative area. The risks, benefits, complications, treatment options, non-operative alternatives, expected recovery and outcomes were discussed with the patient. The possibilities of reaction to medication, pulmonary aspiration, injury to surrounding structures, bleeding, recurrent infection, the need for additional procedures, failure to diagnose a condition, and creating a complication requiring transfusion or operation were discussed with the patient. The patient concurred with the proposed plan, giving informed consent. The site of surgery was properly noted/marked if necessary per policy. The patient has been actively warmed in preoperative area. Preoperative antibiotics are not indicated. Venous thrombosis prophylaxis are not indicated.

Description of procedure: The patient was transported to the operating room. Patient identification and the procedure were confirmed according to institutional protocol. He was transferred to the operating table in the supine position. Care was transitioned to Anesthesiology for induction of general anesthesia, which occurred without incident. The eyes were taped and padded. A preoperative safety timeout was performed according to institutional protocol. The table was turned 90 degrees to the right and the patient was mask ventilated.

A tooth guard was placed to protect the maxillary dentition. A Parsons 2 laryngoscope was carefully inserted into the mouth and advanced into the vallecula, resulting in a Grade 1 view. 1% lidocaine was applied as topical laryngotracheal anesthesia by ENT. Microdirect laryngoscopy was performed including a microscopic examination of the oropharynx, hypopharynx, supraglottis, and glottis using a 4 mm 0-degree endoscope. Rigid bronchoscopy was then performed including a microscopic examination of the subglottis, trachea, mainstem bronchi, and secondary bronchi using a 4 mm 0-degree endoscope. This examination was significant for the below listed findings. The patient was placed into suspension and using a 90 degree probe a deep interarytenoid groove was noted and injected with 0.2 mL Prolaryn gel with good ablation noted. The patient was then intubated by the ENT team with a 4.0 cuffed ETT. Photodocumentation was obtained. The endoscope and tooth guard were carefully removed. The teeth were inspected and there was no evidence of dental injury.

The Crowe-Davis mouth retractor placed in the oral cavity. The palate was palpated with no evidence of a submucous cleft palate. A Foley catheter was placed for retraction of the palate and uvula. A laryngeal mirror was used to visualize

the adenoids, and an adenoidectomy was performed using the Coblator. The nasopharynx and oropharynx were irrigated with saline, and an orogastric tube placed for removal of stomach and pharyngeal contents.

Care was transitioned to Anesthesiology for emergence from general anesthesia, which occurred in the operating room without incident. The patient tolerated the procedure well and there were no complications. He was transported to PACU in stable condition.

Dr. Vikram Ramjee was present and participated in the entirety of the procedure.

Findings:
Laryngeal Exposure:
1. Exposure of Larynx: Parsons 2, grade 1 view
2. Patient position and/or special maneuvers: shoulder roll

Findings:
1. Supraglottis: Normal
2. Glottis: Normal, deep interarytenoid groove noted and injected with 0.2 mL Prolaryn gel
3. Subglottis: Easily fit 4.0 cuffed ETT with leak present at 20 cm H2O
4. Upper trachea: Normal
5. Mid-trachea: Normal
6. Lower trachea: Normal
7. Right bronchus: Normal
8. Left bronchus: Normal
9. 75% adenoid obstruction

Emergency Airway Classification:
1. Bag / Mask from above: Yes
2. LMA from above: Yes
3. Able to intubate from above: Yes
4. Tracheostomy is only airway: N/A

Complications: None; patient tolerated the procedure well.
Disposition: PACU - hemodynamically stable.
Condition: stable

12/16/2024 - Admission (Discharged) in Oklahoma Childrens Hospital (continued)

Anesthesia on 12/16/24 (continued)

I completed my handoff to the receiving clinician during which we:
1. Identified the patient
2. Identified the responsible provider
3. Reviewed the pertinent medical history
4. Discussed the surgical course
5. Reviewed intra-op anesthesia management and issues during anesthesia
6. Set expectations for post-procedure period
7. Allowed opportunity for questions and acknowledgement of understanding.

0957 Anesthesia Stop

Attestation Information

Staff Name	Date	Time	Type
Jessica Fritchie, RN	12/16/24	0728	Pre-Op
Tierra M Sparks, RN	12/16/24	0951	Intra-Op
Susan Wittman, MD	12/16/24	0957	Full Attestation
I was present for induction. I was present during the most demanding portions. I monitored the anesthetic course at intervals. I was immediately available for emergencies. I ensured that a qualified anesthesia provider was in attendance for the duration of the anesthetic. I reviewed the post anesthesia orders.

Author: Hannah Padgett, MD | Service: — | Author Type: Anesthesiologist
Filed: 12/16/2024 11:38 AM | Date of Service: 12/16/2024 11:38 AM | Status: Signed
Editor: Hannah Padgett, MD (Anesthesiologist)

Patient: Parker L Phillips

Procedure Summary

Date: 12/16/24
Anesthesia Start: 0851
Procedures:
ADENOIDECTOMY (Throat)
SUSPENDED MICROLARYNGOSCOPY / BRONCHOSCOPY
INJECTION VOCAL CORDS-PROLARYN GEL
Surgeons: Vikram Ramjee, MD
Anesthesia Type: general

Room / Location: OCH OR 03 / OCH Main OR
Anesthesia Stop: 0957
Diagnosis:
Hypertrophy of adenoids
Dysphagia
(Hypertrophy of adenoids [J35.2])
(Dysphagia [R13.10])
Responsible Provider: Susan Wittman, MD
ASA Status: 2

Anesthesia Type: general

Vitals	Value	Taken Time
BP	93/50	12/16/24 0955
Temp	36.3 °C (97.3 °F)	12/16/24 0954
Pulse	140	12/16/24 1130
Resp	25	12/16/24 1130
SpO2	96 %	12/16/24 1130

POST ANESTHESIA EVALUATION

Perioperative course reviewed.

Patient evaluation in the PACU.

Airway: patent and clear
Hemodynamics: stable
Emergence: smooth
Mental Status: Awake and alert
Analgesia/Pain: Adequately controlled

Nausea/Vomiting: none
Postoperative Hydration: taking oral fluids

Disposition: phase 2 then home

No notable events documented.

PROBLEMS:
Relevant Problems
Anesthesia (within normal limits)

Cardio (within normal limits)
ECHO on 2/16/22 showed structurally normal heart with small PFO.

Development
PT, OT, speech therapies
(+) Term birth of infant (NICU 12 days for HIE
Delivery was induced 2/8/22 due to prolonged labor with meconium stained amniotic fluid appreciated on delivery. He had low APGARs of 2, 6, and 7 and spells of apnea and leg twitching)

Endo (within normal limits)

GI/Hepatic
(+) Dysphagia (He had a dysphagiagram on 9/17/24 which showed trace silent aspiration of pudding bolus but was difficult attribute this to true dysphagia vs irritability. Per MOC, he aspirates daily on saliva but does not have induced apneic episodes.)

GU/Renal (within normal limits)

Hematology (within normal limits)

Pulmonary (within normal limits)
(-) Recent URI (denies)

Eyes, Ears, Nose, and Throat
5/2/24 sleep study No evidence of clinically significant sleep apnea on this polysomnography
(+) Snoring (nightly snoring and mouth-breathing)

Nervous
(+) Developmental delay
(+) Hypoxic-ischemic encephalopathy, unspecified severity (with neonatal seizures. He has had no further seizures since discharge.)

Infectious/Inflammatory
(+) Chronic rhinitis

Other
(+) Nasal obstruction

Clinical information reviewed:
Tobacco | Allergies | Meds | Problems | Med Hx | Surg Hx |

Fam Hx |

2/16/22 ECHO
Summary:
1. Patent foramen ovale, small with a left to right interatrial shunt.
2. Trivial tricuspid valve insufficiency.
3. Trivial mitral valve insufficiency.
4. No patent ductus arteriosus.
5. Normal right ventricular cavity size and systolic function.
6. Normal left ventricular cavity size and systolic function.

PHYSICAL EXAM:
Physical Exam
Cardiovascular: Regular rhythm. Normal rate. No murmur heard.

Neurological:
He has alert, awake and developmentally delayed.
Pulmonary: He has transmitted upper airway sounds (coarse upper airway noise).

Airway: Mallampati class: II. Thyromental distance: TMD less than 6 cm. Mouth opening: Less than 3 cm mouth opening. Neck range of motion: full.

Dental: unable to assess

ANESTHESIA PLAN:
Anesthesia Plan
ASA 2

general
(TIVA then ETT)
inhalational induction
Premedication planned: acetaminophen and midazolam
Anesthetic plan and risks discussed with father and mother.

Consent Form - Scan on 12/16/2024 6:56 AM: Ease App (effective from 12/16/2024)

Scan (below)

EASE APPLICATIONS

CONSENT FOR ELECTRONIC ACCESS TO SURGICAL EVENTS

What it is: Electronic Access to Surgical Events (EASE) is provided by The Children's Hospital at OUMS as an optional way to update the patients' designated loved ones ("Designated Recipients") about the patient's progress during a medical procedure. EASE is a secure messaging system that is used to update the patient's designated loved ones ("Designated Recipients") about the progress of the patient undergoing medical procedures. Updates are sent to the patient's Designated Recipients via text message, photographs, and/or video/audio recording. The EASE application ("EASE app") allows the creation of a secure communications link with the patient's Designated Recipient's smart phone or other device for the transmission of that patient's updates via text message, photographs, and/or video/audio recording. EASE and the EASE app are the property of its creator, EASE Applications, LLC, a Florida limited liability company. The EASE app requires a minimum software requirement as designated in the Apple and Android App Stores.

How it works: The patient's Designated Recipients download the EASE app, called "EASE," to their smart phones or other mobile devices. In order to use the EASE app, the Designated Recipients must agree to specific terms and conditions. During the patient's procedure, updates will be sent to the patient's Designated Recipients' devices via the EASE app. The updates may include texts, pictures, or video/audio that detail the patient's procedure and medical progress. There may be service interruptions due to elements out of the control of The Children's Hospital at OUMS and EASE Applications, LLC such as Cellular service or Internet connectivity.

Confidentiality: Patient information is confidential. EASE is provided as an optional way for patients to share updates with their loved ones. You are not required to participate in EASE. If you choose to participate in EASE, you will designate the individuals who will receive information about your procedure (your "Designated Recipients") and decide whether your Designated Recipients will receive text updates, photographs, and/or video/audio. The medical information sent using the EASE app is encrypted to protect confidentiality. However, once your Designated Recipient receives the information, neither EASE Application, LLC nor The Children's Hospital at OUMS (are able to control how that information is used by your Designated Recipient.

If you want to participate in EASE, please complete this form consenting to the disclosure of information to your Designated Recipients.

CONSENT

I, Tatum Phillips (Parents/Legal Guardian) wish to participate in EASE (Electronic Access to Surgical Events) in connection with the following procedure(s) at The Children's Hospital at OUMS:

Procedure(s): Laparoscopy Date: 12/16/24

I understand that participation in EASE is optional and that if I choose to participate in EASE, confidential information about the patient will be provided to the individuals I designate to receive such information ("Designated Recipient(s)") within the EASE app.

I hereby authorize The Children's Hospital at OUMS, its medical staff, agents, and employees, to disclose information about the Procedure(s) and the patient's progress to Designated Recipients.

If I have selected Photographs and/or Video/Audio Recordings, I hereby authorize The Children's Hospital at OUMS, its medical staff, agents, and employees, to take photographs and/or video/audio recordings of the patient during the Procedure(s), and release EASE Applications, LLC, The Children's Hospital at OUMS, their medical staff, agents, officers, directors, and employees from any and all claims related to the taking of such photographs and video recordings within the EASE app.

I hereby release EASE Applications, LLC, The Children's Hospital at OUMS, their medical staff, agents, officers, directors, and employees from any and all claims related to the release of information concerning the patient to Designated Recipient(s) pursuant to this Consent.

I understand that the information released pursuant to this Consent is individually identifiable health information as defined by the Health Insurance Portability and Accountability Act of 1996 ("HIPAA") and other laws and regulations. I understand that information that has been disclosed is subject to re-disclosure and is no longer protected. I understand that refusal to sign this Consent will not affect the patient's treatment.

I understand that I may revoke this Consent at any time, except to the extent that The Children's Hospital at OUMS has already taken action in reliance on this Consent.

Patient: _____ Patient #: _____ Date/Time: _____

1. I hereby authorize the supervising or performing provider Dr. Ranjee and/or any medical staff, hospital personnel, residents, fellows and other trained persons of his/her choice to perform upon Parker Phillips (PATIENT'S NAME) the following surgical, medical, or diagnostic procedure(s): Direct laryngoscopy, bronchoscopy, with possible intervention, adenoidectomy

2. I also give consent for my administration of anesthetic/conscious sedation drugs or agents or procedures that he or she deems necessary or desirable in the above procedure on my behalf.

3. I consent to the administration of anesthetic/conscious sedation drugs or agents or procedures by my physician(s) and/or professional anesthesia personnel as indicated to maintain comfort and safety during the described operation/procedure and further acknowledge the potential need for blood product transfusion and give consent for such treatments and transfusions unless specifically stated: _____ (DESCRIBE ANY ANESTHETIC OR TRANSFUSION RESTRICTIONS)

4. If a hysterectomy or other sterilization procedure is performed, I have been informed prior to surgery, both orally and in writing, that as a result of the hysterectomy or other sterilization procedure, which is to be performed by the doctor named above, I will be permanently incapable of reproduction (not able to have a baby)

5. Any organs, tissues, or body fluids removed during the procedure/procedures may be used for diagnosis, treatment, research,education, and/or will be properly disposed by the medical faculty after appropriate scientific studies have been carried out.

6. I give consent for students, staff or others to observe the performance of my procedure as considered appropriate by my physician and acknowledge that pictures or movies may be made of the procedure for educational or scientific purposes.

7. I understand the nature and purpose of these procedures and I affirm that the risks, benefits, possibility of complications, as well as the expected results, and medical alternatives have been explained to me by my physician and that I have been given an opportunity to ask and have my questions answered. I further acknowledge that no guarantees have been given to me regarding the results of this/these procedures and that I may refuse this procedure without jeopardizing any current or future medical treatments. I understand that medical students may be responsible for some portion of my care.

(Initial) BP I understand the procedure as the Physician has explained to me
(Initial) BP I understand the risks of the procedure as the Physician has explained to me.
(Initial) BP I understand the alternatives as the Physician has explained to me.
(Initial) BP I understand the risks of the alternatives as the Physician has explained to me.

8. I HEREBY STATE THAT I HAVE READ AND UNDERSTOOD THIS CONSENT AND THAT ALL MY QUESTIONS ABOUT THE PROCEDURE(S), ALTERNATIVE PROCEDURE(S), AND RISKS OF EACH HAVE BEEN ANSWERED IN LANGUAGE THAT I UNDERSTOOD.

General Anesthesia, Pediatric, Care After

The following information offers guidance on how to care for your child after the procedure. Your child's health care provider may also give you more specific instructions. If you have problems or questions, contact your child's health care provider.

What can I expect after the procedure?

After the procedure, it is common for children to have:

- Pain or discomfort at the IV site.
- Nausea or vomiting.
- A sore throat or hoarse voice.
- Trouble sleeping.

Your child may also feel:

- Dizzy.
- Weak.
- Sleepy.
- Irritable.
- Cold.

Babies may briefly have trouble nursing or taking a bottle. Older children who are potty-trained may briefly wet the bed at night.

Follow these instructions at home:

Medicines

- Give over-the-counter and prescription medicines only as told by your child's health care provider. These include any sleeping pills or medicines that cause drowsiness.
- **Do not** give your child aspirin because of the association with Reye's syndrome.

Eating and drinking

- Go back to your child's regular diet and feedings as told by your child's health care provider and as tolerated by your child. In general, it is best to:
  - Start by giving your child only clear liquids.

- Give your child frequent small meals when your child starts to feel hungry. Have your child eat foods that are soft and easy to eat, such as toast. Slowly have your child return to their regular diet.
- Breastfeed or bottle-feed your baby or young child. Do this in small amounts. Slowly increase the amount.

- Give your child enough fluid to keep their urine pale yellow.
- If your child vomits, replace body fluid that has been lost (**rehydrate**) by giving water or clear juice.

Safety

- Your child should rest as told by the health care provider.
- For the time period you were told by the health care provider:
  - **Do not** allow your child to participate in activities where they could fall or become injured.
  - **Do not** allow an older child to drive or use machinery.
  - **Do not** allow your child to drink alcohol.
  - **Do not** allow your child to take sleeping pills or medicines that cause drowsiness.
- Watch your child closely until your child is awake and alert.
- Help your child with:
  - Standing.
  - Walking.
  - Going to the bathroom.
  - Supervise any play or activity.

General instructions

- Your health care provider may check to make sure that your child can walk, drink, and urinate before your child will go home.
- Have your child return to normal activities as told by the health care provider. Ask the health care provider what activities are safe for your child.
- If your child has sleep apnea, surgery and certain medicines can increase the risk for breathing problems. If applicable, follow instructions from the health care provider about having your child use a sleep device:
  - Anytime your child is sleeping, including during daytime naps.
  - While your child is taking prescription pain medicines or medicines that make your child drowsy.
- **Do not** allow your child to use any products that contain nicotine or tobacco. These can delay incision healing after surgery. These products include cigarettes, chewing tobacco, and vaping devices, such as e-cigarettes. If your child needs help quitting, ask a health care provider.
- **Do not** smoke around your child.

Contact a health care provider if:

- Your child has nausea or vomiting that does not get better with medicine.
- Your child vomits every time they eat or drink.
- Your child has pain that does not get better with medicine.
- Your child cannot urinate or has bloody urine.
- Your child develops a skin rash.
- Your child has a fever.

Get help right away if:

- Your child:
  - Has trouble breathing or speaking.
  - Makes high-pitched whistling sounds when they breathe, most often when they breathe out (**wheeze**).
- Your child who is 3 months to 3 years old has a temperature of 102.2°F (39°C) or higher.

- Your child who is younger than 3 months has a temperature of 100.4°F (38°C) or higher.

These symptoms may be an emergency. Do not wait to see if the symptoms will go away. Get help right away. Call 911.

Summary

- After the procedure, it is common for a child to have nausea or a sore throat. It is also common for a child to feel sleepy.
- Watch your child closely until your child is awake and alert.
- Give your child enough fluid to keep their urine pale yellow.
- Have your child return to normal activities as told by the health care provider. Ask the health care provider what activities are safe for your child.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

Flexible Bronchoscopy, Care After

After flexible bronchoscopy, it is common to have a cough that is worse than it was before the procedure for 24–48 hours. Also during this time it is common to have:

- A low-grade fever.
- A sore throat or hoarse voice.
- Some blood in the mucus from your lungs (**sputum**), if a biopsy was done.

Follow these instructions at home:
The instructions below may help you care for yourself at home. Your health care provider may give you more instructions. If you have questions, ask your health care provider.

Eating and drinking

- **Do not** eat or drink (not even water) for 2 hours after your test, or until your numbing medicine (**local anesthetic**) wears off. If you have a numb throat, the risk of burning yourself or choking is higher.
- Start eating soft foods and slowly drinking liquids after your numbness is gone and your cough and gag reflexes have returned.
- You may return to your normal diet the day after the procedure.

Driving

- If you were given a sedative during the procedure, it can affect you for several hours. **Do not** drive or operate machinery until your health care provider says that it is safe.
- Ask your health care provider if the medicine prescribed to you requires you to avoid driving or using machinery.

General instructions

- Take over-the-counter and prescription medicines only as told by your health care provider.
- Return to your normal activities as told by your health care provider. Ask your health care provider what activities are safe for you.
- **Do not** smoke or use any products that contain nicotine or tobacco. If you need help quitting, ask your health care provider.
- Keep all follow-up visits. This is important. It is very important if you had a tissue sample (**biopsy**) taken.

Contact a health care provider if:

- You have a fever.

Get help right away if:

- You have shortness of breath that gets worse.
- You get light-headed.
- You feel like you are going to pass out (**faint**).
- You have chest pain.
- You cough up more than a small amount of blood.

These symptoms may be an emergency. Get help right away. Call 911.

- **Do not wait to see if the symptoms will go away.**
- **Do not drive yourself to the hospital.**

Summary

- **Do not** eat or drink anything (not even water) for 2 hours after your test, or until your numbing medicine wears off.
- **Do not** smoke or use any products that contain nicotine or tobacco. If you need help quitting, ask your health care provider.
- Get help right away if you have chest pain.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

COVID-19 Self Isolation

Please ensure you and those in your household follow CDC recommendations on social distancing following your procedure to reduce the likelihood of post-op complications due to COVID-19.

Instructions

Adenoidectomy and Microlaryngoscopy Discharge Instructions

Diet:
• There are no dietary restrictions.

Activity:
• There are no activity restrictions.
• Your child may return to school or daycare within a few days of surgery, based on whether your child needs to continue using pain medication.

Discharge Medications:
• Continue all medications on Medication Reconciliation form per original prescribing physician
• See Medication Reconciliation form for new or changed medications. The following medications except for saline have been called in to the OU Children's Pharmacy on the 2nd floor of the Children's Hospital near the main entrance.
• Use **saline spray** in both nostrils three times daily for 2 weeks.
• Take **acetaminophen (Tylenol)** and **ibuprofen (Motrin)** as needed for pain or fever. Both medications can be given every 6 hours. It is usually best for the first few days to alternate these and provide one or the other every 3 hours.
• Your discharge nurse should help you with weight-based dosing for both Tylenol and Motrin for your child before you discharge home.

Things to remember:
• Ear pain after surgery is common, and is likely to resolve as any throat pain gets better.
• Your child is likely to have foul smelling breath for 2-3 weeks.
• If you are worried about your child's fluid intake, monitor their urine output closely. Signs that your child is not taking enough fluids are a decreased frequency of urination, dark yellow or even brown colored urine, and dry mouth.
• Fever can occur after adenoidectomy. If so, continue treating with tylenol and ibuprofen, and encourage fluid intake. However, for fevers over 101.4F, go to the nearest emergency department.
• Call 911 or go to the nearest emergency department for: any bleeding from the mouth or nose, concern for dehydration, high fevers, significant difficulty breathing, neck stiffness, lethargy, or anything else you think may be an emergency.
• For any questions or concerns, you may call the pediatric ENT office at OU Children's at **405-271-2662** during business hours. For after hours or weekend concerns, you may call the main hospital phone number at **405-271-8001** and ask to speak to the ENT physician on call.

Follow-up:
• 1/22/2025 as scheduled

*CASE WORKERS :
Fruge,Kathy
Greenlee,Debora

UPDATED BY : Greenlee,Debora
COMMENTS :
--- 2/9/2022 01:18 PM by Debora Greenlee --- SW was contacted 2x stated that MGM was requesting to speak with SW. Pts nurse stated that dad was at the bedside and was needing to speak with SW. SW met with him in the Family Room. Mom was enroute to the hospital. He was told how to get her a wheelchair prior to her arrival. He and mom live together in Milburn (124 mi). This is the first child for both. They have named pt Parker Logan Phillips. Mom worked for a relative prior to being bedbound for blood pressure issues and he does not know if she will return to work. Her cell is 580-371-6882. Dad, Anthony Phillips, wks for PBR refrigeration repair. It is family owned and his time off is flexible. He also receives disability benefits through the VA. His cell is 580-919-4634. Additional contact is for MGM, Amanda Blue 580-371-8719. He states a large support system. SW handout and hospital resources were reviewed. He believes that Durant hospital added pt to the SoonerCare. He stated that mom has a doctor chosen for follow up care though he does not know the name. She is enrolled in WIC, is pumping and has a pump. Dad vapes and having a smoke free home was discussed. He uses THC occasionally and the importance of storing it safely was reviewed. Pt has a car seat, crib and supplies. Educational and support services were reviewed. He stated that mom does not have a hx of depression. SW encouraged him to have both of them read the March of Dimes and PPD handouts. Neither parent is vaccinated against COVID and would not be a candidate at this time at RMC. He requested a room at Holiday Inn. He was told that SW would contact Durant Hosp and see if pt had been added so that a lodging voucher could be done. SW and dad went to the waiting room and met with MGM. She had multiple questions that had prev. been explained to dad. SW told her about hosp. resources, wheelchairs, lodging, LC services and more. She stated that she is going to go home though would return and be staying. SW explained that she would not be able to see pt and she stated that she understood. Dad was given a visitation log for mom and it was explained how to complete it and the importance. Both understand to contact SW if they have any questions. Durant Hosp. had added pt and SoonerCare ID # is B37271506. Voucher was sent to Holiday Inn and confirmed received for the 9th through the 16th with check out on the 17th. Dad was updated. Will follow. --- 2/9/2022 10:08 AM by Kathy Fruge --- Day/Date: Wednesday 2/9/22 Anticipated discharge day/date: 2-3 weeks Reason for visit: Possible seizures Readmit: (yes/no) Any factors that may have contributed to readmission: Current family and support system (Caregiver/Guardian/DHS involvement): In utero drug exposure: No

Living arrangements: Parents Safe Sleep Plan: (crib, pack and play, bassinet) Pharmacy: Psychosocial issues that may affect transition (domestic violence, smoking): Insurance coverage for discharge needs: Medicaid pending. Financial Concerns: Medication Issues: (coverage, ability to afford, Meds to Beds at dc) Transportation at discharge and to appointments: (name, relationship, contact information, car seat available)

Greenlee,Debora

UPDATED BY : Greenlee,Debora
COMMENTS :
--- 2/16/2022 10:22 AM by Debora Greenlee --- Dad was contacted to confirm that they wanted to extend their stay at Holiday Inn. Logs were checked and voucher was sent through the 24th. These were confirmed received. Will follow. --- 2/9/2022 01:18 PM by Debora Greenlee --- SW was contacted 2x stated that MGM was requesting to speak with SW. Pts nurse stated that dad was at the bedside and was needing to speak with SW. SW met with him in the Family Room. Mom was enroute to the hospital. He was told how to get her a wheelchair prior to her arrival. He and mom live together in Milburn (124 mi). This is the first child for both. They have named pt Parker Logan Phillips. Mom worked for a relative prior to being bedbound for blood pressure issues and he does not know if she will return to work. Her cell is 580-371-6882. Dad, Anthony Phillips, wks for PBR refrigeration repair. It is family owned and his time off is flexible. He also receives disability benefits through the VA. His cell is 580-919-4634. Additional contact is for MGM, Amanda Blue 580-371-8719. He states a large support system. SW handout and hospital resources were reviewed. He believes that Durant hospital added pt to the SoonerCare. He stated that mom has a doctor chosen for follow up care though he does not know the name. She is enrolled in WIC, is pumping and has a pump. Dad vapes and having a smoke free home was discussed. He uses THC occasionally and the importance of storing it safely was reviewed. Pt has a car seat, crib and supplies. Educational and support services were reviewed. He stated that mom does not have a hx of depression. SW encouraged him to have both of them read the March of Dimes and PPD handouts. Neither parent is vaccinated against COVID and would not be a candidate at this time at RMC. He requested a room at Holiday Inn. He was told that SW would contact Durant Hosp and see if pt had been added so that a lodging voucher could be done. SW and dad went to the waiting room and met with MGM. She had multiple questions that had prev. been explained to dad. SW told her about hosp. resources, wheelchairs, lodging, LC services and more. She stated that she is going to go home though would return and be staying. SW explained that she would not be able to see pt and she stated that she understood. Dad was given a visitation log for mom and it was explained how to complete it and the importance. Both understand to contact SW if they have any questions. Durant Hosp. had added pt and SoonerCare ID # is B37271506. Voucher was sent to Holiday Inn and confirmed received for the 9th through the 16th with check out on the 17th. Dad was updated. Will follow. --- 2/9/2022 10:08 AM by Kathy Fruge --- Day/Date: Wednesday 2/9/22 Anticipated discharge

OUM Peripherally Inserted Central Catheter (PICC) or Midline Catheter Consent

1. I _____ hereby authorize the following OUM advanced practice provider, or vascular access nurse:_____
   to perform upon me a Peripherally Inserted Central Catheter (PICC) _____ (Initial)
   to perform upon me a Midline Catheter _____ (Initial)

2. **I understand the nature and purpose of this procedure, and I affirm that the risks, benefits, possibility of complications as well as the expected results, and medical alternatives have been explained to me. I have been given an opportunity to ask and have my questions answered. I further acknowledge that no guarantees have been given, and that I may refuse without jeopardizing any current or future medical treatments.**

   (Initial) _____ The catheter insertion procedure, care, maintenance, and possible complications have been explained to me and I understand them.

   (Initial) _____ I understand this is not the only way to receive my medication. I understand that my healthcare team has determined a PICC/Midline would be the safest and most effective means of giving my medication at this time.

   (Initial) _____ I understand the risks and alternatives of the procedure as explained by Advanced Practice provider or vascular access nurse.

   (Initial) _____ I understand this is an invasive and sterile procedure, and that the end of the PICC catheter will rest in a vein near my heart or Midline catheter tip in axilla.

Potential risks include, but are not limited to: infection, bleeding, thrombus, catheter or air embolism, arterial puncture, infiltration, nerve irritation or injury, and irregular heartbeat.

Phone consent from mother

Patient: BLUE, BB - TATUM Patient #: _____ Date/Time: _____

1. I hereby authorize the supervising or performing provider Dr - Nalini Dasari and/or any medical staff, hospital personnel, residents, fellows and other trained persons of his/her choice to perform upon

_____
(PATIENTS NAME)

the following surgical, medical, or diagnostic procedure(s): _____

2. I also give consent for my administration of anesthetic/conscious sedation drugs or agents or procedures that he or she deems necessary or desirable in the above procedure on my behalf.

3. I consent to the administration of anesthetic/conscious sedation drugs or agents or procedures by my physician(s) and/or professional anesthesia personnel as indicated to maintain comfort and safety during the described operation/procedure and further acknowledge the potential need for blood product transfusion and give consent for such treatments and transfusions unless specifically stated: _____

(DESCRIBE ANY ANESTHETIC OR TRANSFUSION RESTRICTIONS)

4. If a hysterectomy or other sterilization procedure is performed, I have been informed prior to surgery, both orally and in writing, that as a result of the hysterectomy or other sterilization procedure, which is to be performed by the doctor named above, I will be permanently incapable of reproduction (not able to have a baby).

5. Any organs, tissues, or body fluids removed during the procedure/procedures may be used for diagnosis, treatment, research, education, and/or will be properly disposed by the medical facility after appropriate scientific studies have been carried out.

6. I give consent for students, staff or others to observe the performance of my procedure as considered appropriate by my physician and acknowledge that pictures or movies may be made of the procedure for educational or scientific purposes.

7. I understand the nature and purpose of these procedures and I affirm that the risks, benefits, possibility of complications, as well as the expected results, and medical alternatives have been explained to me by my physician and that I have been given an opportunity to ask and have my questions answered. I further acknowledge that no guarantees have been given to me regarding the results of this/these procedures and that I may refuse this procedure without jeopardizing any current or future medical treatments. I understand that medical students may be responsible for some portion of my care.

(Initial) _____ I understand the procedure as the Physician has explained to me.
(Initial) _____ I understand the risks of the procedure as the Physician has explained to me.
(Initial) _____ I understand the alternatives as the Physician has explained to me.
(Initial) _____ I understand the risks of the alternatives as the Physician has explained to me.

8. **I HEREBY STATE THAT I HAVE READ AND UNDERSTOOD THIS CONSENT AND THAT ALL MY QUESTIONS ABOUT THE PROCEDURE(S), ALTERNATIVE PROCEDURE(S), AND RISKS OF EACH HAVE BEEN ANSWERED IN LANGUAGE THAT I UNDERSTOOD.**
VERBAL CONSENT OVER PHONE FROM MOTHER.

Results and Interpretation

Interpretation: In this plasma amino acid profile, multiple species were mild to moderately elevated including leucine and ornithine. While not overly consistent with an inherited metabolic disorder and may be secondary to diet, illness, and/or medications, recommend repeat plasma amino acid profile if clinical symptoms persist.

LABORATORY REPORT

Patient Name: BLUE, BB-TATUM
Sex: M **DOB:** 02/08/2022 **Age:** 3d
Eurofins Viracor Patient ID: 541834
Physician: Caines, Macie N.
Received: 02/10/2022 08:15
Report Delivered: 02/11/2022 12:06

Client MRN: E003047593

Client:
OU Medical Center Laboratory
1200 Everett Drive
Room EB400
Oklahoma City, OK 73104

Comments:
TESTING PERFORMED AT LOW VOLUME ON PLASMA SPECIMEN FOR HSV 1 & 2, MAY AFFECT RESULTS.

RESULTS

HSV 1 & 2 qPCR (plasma) 8500
Client Accession ID: 0208:PN:VP00095R
Eurofins Viracor Accession ID: 2204004150
Collected: 02/08/2022 22:11
Final - Approved 02/11/2022 12:05
Performed at: Eurofins Viracor - 1001 NW Technology Dr., Lee's Summit, MO | CLIA# 26D-0983643

TEST	RESULT	FLAG	UNIT	REF RANGE
HSV 1	Not Detected		copies/mL	Not Detected
HSV 2	Not Detected		copies/mL	Not Detected

Assay Range for HSV 1 is 37 copies/mL to 1.00E+08 copies/mL

Assay Range for HSV 2 is 73 copies/mL to 1.00E+08 copies/mL

The limit of quantitation (LOQ) is 37 (HSV 1) and 73 (HSV 2) copies/mL. HSV DNA detected below the LOQ will be reported as Detected:<37 copies/mL (HSV 1) or Detected:<73 copies/mL (HSV 2).

This test was developed and its performance characteristics determined by Eurofins Viracor. It has not been cleared or approved by the U.S. Food and Drug Administration. Results should be used in conjunction with clinical findings, and should not form the sole basis for a diagnosis or treatment decision.

OUHSC Biochemical Genetics Laboratory Test Report

Patient name: Blue, BB-Tatum Accession #: **22-003-OAQL**

DOB: 2/8/2022	Sex: Male	Referring Physician: Jennifer Fraysur	
Age at Collection: 1 day		Tel:	Fax:
Sample Type: Urine		Hospital/Institution: Oklahoma Health Science Center	
Sample Collected: 2/9/2022		Duplicate reports:	
Sample Received: 2/11/2022		Sample Condition: Good	
Final Report: 2/15/2022		Reason for referral: Apnea	
Medical record#: EM889286			
Client Accession #: 22-003-OAQL			
Sample ID #: E003047593			

Test Name: Urine Organic Acids, Qualitative

Results and Interpretation

In this urine organic acid profile, no species overly consistent with an inherited metabolic disorder were observed. However, a large peak of N-acetyltyrosine was observed and is likely secondary to diet (total parenteral nutrition).

DISCLAIMER
The organic solvent extraction method used may produce sub-optimal extraction of some metabolites. These include, but are not limited to: orotic acid, succinylacetone and n-acetylaspartic acid, which may be ordered as specific tests. Metabolites observed in urine organic acids may reflect the recent clinical and nutritional status, special diets or dietary supplementation, of the patient at the time of sample collection. A test result that is non-diagnostic does not eliminate the possibility of the presence of a metabolic disease. Inborn errors of metabolism characterized by minute or intermittent excretion of the relevant metabolites may mean that these are missed especially if the patient is well or asymptomatic at the time of sample analysis.

Application:	35 dB nHL
Duration:	2:43
% Myogenic:	0%
Left ear:	Pass
Left sweeps:	3505
Right ear:	Pass
Right sweeps:	4507

RECOMMENDATIONS

☑ **PASS**: No further evaluation required at this time. Primary Care Physician to manage further audiological evaluation based on risk factors and child development.

☐ **FOLLOW UP REQUIRED**:

- ☐ **RESCREEN**: Baby requires rescreen prior to discharge due to Refer or incomplete/NA results.
- ☐ **REFER**: Passing result not achieved in one or both ears or testing was not performed due to atresia/microtia. Schedule further hearing testing 2-4 weeks from discharge. Your state may require cCMV screening.

Screener: Makeylyn Bawyer **Date** 02/18/22

The following are auditory risk indicators for use as a resource by Primary Care Physician from the Joint Committee on Infant Hearing. (2019). Year 2019 Position Statement: Principles and Guidelines for Early Hearing Detection and Intervention Programs. *Journal of Early Hearing Detection and Intervention*, 4(4). DOI: 10.15142/fptk-b748

Risk Factors for Early Childhood Hearing Loss: Guidelines for Infants who Pass the Newborn Hearing Screen.
Please review state specific EHDI guidelines for further delineation of risk factor classification classes.

- Caregiver concern regarding hearing, speech, language, developmental delay, and/or developmental regression.
- Family history of permanent childhood hearing loss.
- Neonatal intensive care of more than 5 days or any of the following regardless of length of stay: Extracorporeal Membrane Oxygenation (ECMO), hyperbilirubinemia that requires exchange transfusion.
- Aminoglycoside administration of more than 5 days; if less than 5 days, aminoglycoside administration remains a risk factor if toxic blood levels are identified or if a family history of mitochondrial genetic mutation associated with aminoglycoside sensitivity exists.
- Asphyxia or Hypoxic Ischemic Encephalopathy (HIE).
- In utero infections, such as Cytomegalovirus (CMV), herpes, rubella, syphilis, toxoplasmosis, and/or Mother confirmed Zika and infant with or without laboratory finding.
- Craniofacial malformations, including microtia/atresia, ear dysplasia, oral facial clefting, microphthalmia, congenital microcephaly, congenital or acquired hydrocephalus, and temporal bone abnormalities.
- Physical findings, such as white forelock, that are associated with a syndrome known to include a sensorineural or permanent conductive hearing loss.
- Perinatal or postnatal culture-positive infections associated with sensorineural hearing loss, including confirmed bacterial and viral (especially herpes viruses and varicella) meningitis or encephalitis.
- Perinatal or Postnatal head trauma, especially basal skull/temporal bone fracture that requires hospitalization.
- Perinatal or postnatal chemotherapy.

Comments:

Upon Discharge Affix Infant's Identification band below and have statement signed and witnessed.

Date 2/20/2022

I Certify that during the discharge procedure I received my baby, examined it and determined that it was mine. I checked the identification parts sealed on the baby and on me and found that they were identically numbered _____ and contained correct identifying information.

Neonatology Inpatient Admit Note

Born: 2/8/22 6:20 (Tuesday); Admitted: 2/8/22
Mother: TATUM Blue
Father: Blue
Phone: 580-371-6882
Medical Record# E003047593; Account# E00677497957

OB:
Delivering OB: Whittington DO, Kinion (580)920-2122

CHIEF COMPLAINT: 3050 gram male transferred from Durant Medical Center of Southeastern Oklahoma and admitted for possible seizure activity, r/o sepsis.

MOTHER'S HISTORY: 20 year-old G1P0000 unknown race female.
Blood type B Positive; Syphilis test - negative; rubella - positive (immune); Hepatitis B studies - negative; HIV - negative; herpes history - no history of prior infection; hepatitis history - no known history.

PREGNANCY HISTORY: EDC 2/7/22 => 40 + 1/7 weeks.
Uncomplicated pregnancy.
GBS Status: negative.
Prenatal tests: Normal prenatal testing.
Medications: Omeprazole. Steroids: No antenatal steroids were given.
No tobacco, alcohol, or drug use during pregnancy.

LABOR and DELIVERY: Induced labor, AROM with thick meconium.
Artificial rupture of membranes 2/7/22 at 18:45 (11.6 hours prior to delivery); vaginal delivery with epidural anesthesia. Born on 2/8/22 at 6:20.

INFANT: Male, birthweight 3050 grams (6 lbs 11.6 oz).
Apgars: 2 @1 min (HR-2, Resp-0, Tone-0, Reflex-0, Color-0)
6 @5 min (HR-2, Resp-1, Tone-1, Reflex-1, Color-1)
7 @10 min (HR-2, Resp-2, Tone-1, Reflex-1, Color-1)
Resuscitation steps: oxygen, face mask ventilation.
Per reports from RH: Infant was deep suctioned by delivering provider immediately after delivery. Taken to warmer, continued to deep suction. HR >100bpm from birth. Infant showed no respiratory effort, PPV was given for approximately 3minutes and continued to have irregular respirations. Infant taken to nursery and CPAP was initiated. Grunting subsided and infant was weaned to RA by approximately 4HOL Oral feedings were started and infant continued to do well. At approximately 10HOL infant noted to have apnea spells with color change and possible twitching of extremities. D/t concerns for seizure activity

referral was initiated to transport infant to TCH. Infant again with seizure activity approximately 12HOL and was given loading dose of phenobarbital. NF team arrived to take over care, noted infant to be borderline lethargic following phenobarbital dose. NS bolus given in route for soft blood pressures. No seizure activity noted by NF team on transport. Infant admitted to NICU in room air with relatively normal neurological exam.

ADMISSION PHYSICAL EXAM (at 2/8/22 22:53)
Weight - 3050 grams (6 lbs 11.6 oz) - 11%ile; Z-score = -1.21
General: 40+1/7 weeks AGA male -- exam compatible with dates. Infant in room air and in no distress. Skin pink, warm, and dry. Petechia to back and sides.
HEENT: Anterior fontanelle open, soft, and flat with sutures approximated. Moulding and caput with redness to scalp from presentation. Eyes clear. Red reflex present bilaterally. Pupils equally round and reactive to light. Oral mucosa pink and moist, palate intact. Ears in normal shape and position.
Chest: Chest rise symmetrical with clear breath sounds bilaterally.
Heart: Normal sinus rhythm, normal perfusion and pulses, no murmur.
Abdomen: Soft and non-distended, non-tender with active bowel sounds.
Genitals: Normal male genitalia. tests descended bilaterally. Anus: Patent anus in normal position.
Skeletal: No abnormalities noted. Extremities: Moving all extremities equally.
Neuro: Alert, active, responsive, normal tone for gestational age, normal primitive reflexes. Infant appropriately reactive to exam.
Jittery/jerking movements seen at RH. none appreciated on exam.
Exam by L. Donaldson, NNP.

LABS
Glucose:
* 2/8 23:09: 80 (Accuchek).

STABILIZATION
Infant admitted to the NICU in room air. Routine newborn assessment and protocols initiated.

MEDICATIONS
Acyclovir, 60 mg IV q8h (19.7 mg/kg/dose, 59 mg/kg/day) started on 2/8/22
Amikacin, 37 mg IV q24h (12.1 mg/kg/day) started on 2/8/22
Ampicillin, 300 mg IV q12h (98.4 mg/kg/dose, 197 mg/kg/day) started on 2/8/22
PHENObarbital, 15 mg IV q24h (4.9 mg/kg/day) started on 2/9/22

ALLERGIES and ADVERSE REACTIONS
No known allergies.

APPRAISAL
1. 40 week AGA male
2. r/o sepsis
3. r/o seizures

PLAN
Provide routine NICU care with CR monitor, neutral thermal environment, and routine screening procedures.
--RESPIRATORY: RA (required CPAP briefly after delivery, weaned to RA approximately 2HOL). THICK MEC
--Weaning parameters/gases: prn

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

--CV: needs CCHD at 24 hrs or when in room air. soft BPs reported in transport, NS bolus x1.
--FEN/GI: PO fed well at RH. currently NPO with SNAP10 approximately 80mL/kg/day. blood sugar stable. restart PO feeds and adjust IVF as indicated.
--HEME: MBT B+. Petecchial rash noted, although platelets WNL.
--ID: BCx sent at RH x2. Repeated on admission. ID labs on admission. HSV workup sent d/t questionable seizure activity. Will attempt LP for HSV CSF PCR and send serum PCR. Amp/Ami/Acyclovir. No known maternal hx. adequate prenatal care, all other labs negative.
--NEURO: needs ABR when in crib and 34 weeks. possible seizure activity (apnea and twitching) noted approximately 10HOL and again approximately 12HOL). loaded w/ Qbarb and maintenance ordered. consider CFM if any more seizure activity. Neurology consulted; they recommended Keppra for breakthrough seizure activty. HUS ordered and pending. Will need MRI in next couple of days.
--GEM/ORTHO/SKIN: NBS #1 ___, NBS #2 ___
--GU: strict I and O.
--EYE: monitoring for need
--IMMUNIZATIONS: HBV given at RH.
--HOMETOWN/SOCIAL: Durant. 20yo G1.

I personally examined the patient, reviewed and updated the history and assessment, and developed the plan of care with the multidisciplinary team as documented in this note. Macie Caines, NNP assisted me in the care of the patient and preparation of this note.

The patient requires intensive monitoring of cardiorespiratory stability, growth, nutrition, and I and O.
I provided 30 minutes of care.

E-signed by Doug Dannaway, MD; completed 2/9/22 4:16

Activity Date: 02/09/22 Time: 1536

Patient Notes: LACTATION CONSULT
- Create 02/09/22 1536 MO 02/09/22 1542 MO

Reason for Consult: Infant Admit to SCN/NICU
Consult time: 30 min
Lactation Acuity: Level III
LATCH Score: Unable to assess
Mom's Goal: Not sure

S: Mother states she wishes to provide EBM for her infant. Started pumping session and fitted for flange size 24. Mom voices understanding of pumping q 2 3 hrs 15 20 and at least once during the night with hands on pumping. Also discussed engorgement management. States has manual pump and hands free pump at home. Encouraged to use symphony pump at bedside while at bedside.

O: Education provided:
1. Benefits of Breastfeeding for Mom/Baby
2. Pump set-up and operation
3. Pumping frequency and duration, including hand expression after pumping
4. Cleaning Equipment
5. Milk Collection and Storage
6. Hand Expression, especially in 1st 3 days
7. Availability of hospital-grade pumps for use after mom is discharged
8. Kangaroo Care
9. Call TLC if she is having difficulty obtaining a pump
10. Benefits and risks of PDM and formula

A: Maternal knowledge deficit: establishing milk supply w/ a breast pump: Risk for delayed lactogenisis II and/or low milk supply r/t:induced labor,separation of mom/baby

P: Use breast pump at least 8x/24 hr, obtain breast pump for home use, begin KC & breastfeed when infant is able, LC f/u w/in 7 days.

Mariana Orozco LPN/IBCLC

Diagnosis/Goal/Intervention Description

Activity Type	Occurred Date	Occurred Time	by	Recorded Date	Recorded Time	by	Sts Directions Documented Comment	Documented Units	From Change

Activity Date: 02/11/22 Time: 1418 (continued)

5186454 ST: NICU Evaluation (continued)
- INFANT WAS IN HIS WARMER, UNDERGOING AN ECG. HE WAS HAND
- SWADDLED TO INTRO CARE. HE WAS NOTED TO BE SOMEWHAT IRRITABL
- BUT ABLE TO BE CONSOLED WITH HAND SWADDLING. HE WAS OFFERED
GLOVED FINGER TO ASSESS ORAL CAVITY AND SUCK. ORAL CAVITY
- WAS INTACT. HE HAD A HYPOTONIC TONGUE INITIALLY, BUT ONCE
- FINGER IN GOOD POSITION AND WITH FIRM STROKES TO TONGUE AND
- PALATE, HE WAS ABLE TO PRODUCE A SUCK ON GLOVED FINGER.
SUCK WAS STRONG. HE WAS TURNED TO SIDELYING IN HIS WARMER.
- AND MILK WAS OFFERED VIA SLOW FLOW NIPPLE. HE WAS GIVEN A
- DRY NIPPLE INITIALLY, WHICH INITIALLY MADE HIM IRRITABLE.
- BUT AFTER SEVERAL MINUTES OF CALMING AND ATTEMPTING TO
PRODUCE A SUCK ON THE NIPPLE, HE WAS ABLE TO LATCH. HE THEN
- PRODUCED A VERY STRONG NUTRITIVE SUCK. HE ATE WELL WITH
- BREAKS THAT WERE LONG, BUT HE WAS ALLOWED TO CONTINUE
- WITH THE FEED WITHOUT PRODDING. HE WAS ABLE TO COMPLETE HIS
40CC BOTTLE IN ABOUT 20 MINUTES FROM START TO FINISH.
Goal: SAFE, EFFICIENT PO FEEDING.
Target Date: 02/18/22
===IMPRESSIONS===
INFANT WAS ABLE TO PRODUCE A NUTRITIVE SUCK, HOWEVER HE
- REQUIRED EXTRA TIME AND PATIENCE TO LATCH AND PRODUCE A
- SUCK.
===RECOMMENDATIONS===
1. FEED 1X PER SHIFT OR WITH CUES
- 2. SLP WILL FOLLOW

Patient Notes: CHILD LIFE NOTES
- Create 02/17/22 1524 RB 02/17/22 1529 RB

LATE ENTRY FROM 2/16/22

Child Life Note:

PL recently admitted to NICU with need for cooling. Per team, pt arrived too late to begin cooling protocols.

CCLS introduced self and services to pt's father, Anthony, at bedside. FOP verbalized that they were settling in to routine and life as NICU parents. CCLS validated the transition period and asked FOP how MOP is doing. CCLS asked about other children which FOP denied. CCLS provided FOP with CCLS's work number for times FOP and MOP have needs or questions. CCLS to continue supporting family and pt throughout admission.

Later, CCLS received message from FOP regarding MOP's concern that CCLS was sent by team to meet parents because something had changed in "pt's condition" or that "patient would not make it". CCLS followed up with parents and validated the fear/concern but reassured family that Child Life Specialists support all NICU families in various ways. CCLS did pass this along to team so they could be aware of family's fear/apprehension towards pt's status.

This CCLS to continue following pt and family. Questions.
Rachel Burnett, MS, CCLS
Certified Child Life Specialist

Child Life Note:

PL "Parker" continues NICU admission for HTF. CCLS met FOP, Anthony, at bedside earlier this week. MOP present and actively holding pt at this time.

CCLS introduced self and services to MOP. CCLS assessed how MOP has felt so far transitioning to life as a NICU mom. MOP stated that she is just happy on days like this when she gets to hold. CCLS talked with MOP about coping and provided MOP with a blank journal for any questions parents might think of when team members have left the room. CCLS offered a NICU journal for family to keep track of memories from the NICU with pt and MOP expressed interest. CCLS provided education regarding bonding and scent and provided MOP with scent cloths to utilize with pt when away from bedside.

Parents do not have other children. CCLS to continue following pt and family throughout admission. Questions.
Rachel Burnett, MS, CCLS
Certified Child Life Specialist

Discharge Instructions - Page 1

The Baby Care Book - The information in your Baby Care Book is considered as home care instructions. Your signature on the Discharge Instructions means that you understand and feel comfortable with each topic.

WARNING SIGNS - Call your baby's doctor for the following:
TEMPERATURE: Less than 97.° or greater than 100.4°.
BREATHING: Excessive crying, irritability or lethargy (sleepiness).
FEEDING: Difficulty waking up and refusing to eat for 2-3 feedings in a row.
SKIN: More yellow than at the time of discharge, or a blue or gray color.
VOMITING: After several feedings in a row, or bloody or green vomit.
URINATING: Less than 6 wet diapers in a 24 hour period.
STOOLING: Blood, black or dark purple, white/grey clay-like or chalky stools, large, frequent and watery stools, or no bowel movement for 2 days.
UMBILICAL CORD: Redness, swelling, tenderness, bleeding, foul odor, or yellow green discharge around the umbilical cord.
Feeding - Follow the feeding guidelines offered by your baby's discharging doctor:

Breastmilk or Similac Pro-Advance 20 calorie (100ml every 3 hours)
Temperature - Check the baby's temperature if he/she feels warm, cold or seems sick. If your baby's temperature is high, remove clothing and recheck in 30 minutes. If it is still high, your baby may be sick. If your baby's temperature is low, add clothing and recheck in 30 minutes. If the temperature is still low your baby may be sick. Call your doctor for any temperature issues.
A normal under arm temperature should be between 97.7 to 99.9 F (36.5-37.5 C).
Jaundice - Check your baby's skin color in the same lighting once a day. Yellowing of the skin that gets worse each day , or a blue or gray tone to your baby's skin color may need to be checked by your pediatrician.
Diapers - Bowel movements vary - some infants stool with each feeding and others every few days. Stools may be runny, seedy, mushy, pasty, green, yellow or brown. Babies should have at least 6 wet diapers in a 24 hour period. If your baby has not had a stool in 2-3 days and seems uncomfortable or is only having hard stool "pebbles", your baby may be constipated. Call your doctor for directions.
Activity Level - Limit activity outside the home to doctors visits only as much as possible. Avoid crowded areas like the mall, grocery store, church, or family gatherings with your baby. It is recommended that you avoid crowded areas for at least 6-8 weeks after discharge.
Sleeping - Always place your baby on his or her back to sleep, for naps and at night. Place your baby on a firm sleep surface, such as on a safety-approved crib mattress covered by a fitted sheet. Keep soft objects such as bumper pads, toys, and loose bedding out of your baby's sleep area. Keep your baby's sleep area close to, but separate from, where you and others sleep. Remember "tummy time" when your baby is awake and someone is watching him/her.
Car Seat Safety - Your baby should always ride in a rear-facing car safety seat, in the back seat of the vehicle, for as long as possible (weight and height with in range for that specific seat). This is safest. It protects babies from head and spinal cord injury. Make sure the seat belt or LATCH attachments hold the car seat in place tightly at the correct angel by following the angel indicator on the car safety seat. The base of the car seat, should not move more than 1 inch front to back, or side to side at the belt path once installed. Buckle and tighten the harness snugly over your baby's body, with the chest clip at armpit level. ALWAYS follow the car seats manufacturers instructions and the car manual to install and use the seat correctly.
NO SMOKING - Do not let anyone smoke around your baby.
Discharge Call Follow-up - Thank you for choosing OU Medicine. It is our highest priority you are very satisfied with the care we provided during your stay with us. To ensure continued excellent outcomes after your discharge, a nurse from our team will be contacting you in the next few days as a follow-up to your care to answer any questions you may have.Please let me know what number and time is best to reach you.
Thank you again for our privilege to serve you!
Is it okay for us to call you? (yes or no)
If yes, at what number can we call you? ( ) -
What time is best to reach you? (:)

Room# 7172A

Printed: 2/13/22 10:57

Conditions of Admission and Consent for Outpatient Care

1. **Consent to Treatment.** I consent to the procedures, which may be performed during this hospitalization or during an outpatient episode of care, including, but not limited to, emergency treatment or services, and which may include laboratory procedures, x-ray examination, diagnostic procedures, medical, nursing or surgical treatment or procedures, anesthesia, or hospital services rendered as ordered by the Provider. I consent to allowing students as part of their training in health care education to participate in the delivery of my medical care and treatment or be observers while I receive medical care and treatment at the Hospital, and that instructors and/or hospital staff will supervise these students. I further consent to the hospital conducting blood-borne infectious disease testing, including but not limited to, testing for hepatitis, Acquired Immune Deficiency Syndrome ("AIDS"), and Human Immunodeficiency Virus ("HIV"), if a physician orders such tests or if ordered by protocol. I understand that the potential side effects and complications of this testing are generally minor and are comparable to the routine collection of blood specimens, including discomfort from the needle stick and/or slight burning, bleeding or soreness at the puncture site. The results of this test will become part of my confidential medical record.

2. **Consent to Treatment Using Telemedicine.** I consent to treatment involving the use of electronic communications ("Telemedicine") to enable health care providers at different locations to share my individual patient medical information for diagnosis, therapy, follow-up, and/or education purposes. I consent to forwarding my information to a third party as needed to receive Telemedicine services, and I understand that existing confidentiality protections apply. I acknowledge that while Telemedicine can be used to provide improved access to care, as with any medical procedure, there are potential risks and no results can be guaranteed or assured. These risks include, but are not limited to: technical problems with the information transmission or equipment failures that could result in lost information or delays in treatment. I understand that I have a right to withhold or withdraw my consent to the use of Telemedicine in the course of my care at any time, without affecting my right to future treatment and without risking the loss or withdrawal of any program benefit to which I would otherwise be entitled.

3. **Consent to Medication Not Yet FDA Approved and/or Medication Prepared/Repackaged by Outsourcing or Compounding Pharmacy**. As part of the services provided, you may be treated with a medication that has not received FDA approval. You may also receive a medication that has been prepared or repackaged by an outsourcing facility or compounding pharmacy. Certain medications, for which there are no alternatives or which your physician recommends, may be necessary for potentially life-saving treatment.

4. **Consent to Photographs, Videotapes and Audio Recordings.** I consent to photographs, videotapes, digital or audio recordings, and/or images of me being recorded for security purposes and/or the hospital's quality improvement and/or risk management activities. I understand that the facility retains the ownership rights to the images and/or recordings. I will be allowed to request access to or copies of the images and/or recordings when technologically feasible unless otherwise prohibited by law. I understand that these images and/or recordings will be securely stored and protected. Images and/or recordings in which I am identified will not be released and/or used outside of the facility without a specific written authorization from me or my legal representative unless otherwise required by law.

5. **Financial Agreement.** In consideration of the services to be rendered to Patient, Patient or Guarantor individually promises to pay the Patient's account at the rates stated in the hospital's price list (known as the "Charge Master") effective on the date the charge is processed for the service provided, which rates are hereby expressly incorporated by reference as the price term of this agreement to pay the Patient's

account. Some special items will be priced separately if there is no price listed on the Charge Master. An estimate of the anticipated charges for services to be provided to the Patient is available upon request from the hospital. Estimates may vary significantly from the final charges based on a variety of factors, including, but not limited to, the course of treatment, intensity of care, physician practices, and the necessity of providing additional goods and services. Most or all of the physicians performing services in the hospital are independent and are not hospital agents or employees. Independent physicians are responsible for their own actions and the hospital shall not be liable for the acts or omissions of any such independent physicians. **Professional services rendered by independent contractors are not part of the hospital bill. These services will be billed to the Patient separately**. I understand that physicians or other health care professionals may be called upon to provide care or services to me or on my behalf, but that I may not actually see, or be examined by, all physicians or health care professionals participating in my care; for example, I may not see physicians providing radiology, pathology, EKG interpretation and anesthesiology services. I understand that, in most instances, there will be a separate charge for professional services rendered by physicians to me or on my behalf, and that I will receive a bill for these professional services that is separate from the bill for hospital services.

The hospital will provide a medical screening examination as required to all Patients who are seeking medical services to determine if there is an emergency medical condition without regard to the Patient's ability to pay. If there is an emergency medical condition, the hospital will provide stabilizing treatment within its capacity

If supplies and services are provided to Patient who has coverage through a governmental program or through certain private health insurance plans, the hospital may accept a discounted payment for those supplies and services. In this event any payment required from the Patient or Guarantor will be determined by the terms of the governmental program or private health insurance plan. If the Patient is uninsured and not covered by a governmental program, the Patient may be eligible to have his or her account discounted or forgiven under the hospital's uninsured discount or charity care programs in effect at the time of treatment. I understand that I may request information about these programs from the hospital. I also understand that, as a courtesy to me, the hospital may bill an insurance company offering coverage, but may not be obligated to do so. Regardless, I agree that, except where prohibited by law, the financial responsibility for the services rendered belongs to me, the Patient or Guarantor. I agree to pay for services that are not covered and covered charges not paid in full by insurance coverage including, but not limited to, coinsurance, deductibles, non-covered benefits due to policy limits or policy exclusions, or failure to comply with insurance plan requirements.

This hospital reserves the right not to submit a claim to a patient's insurance company. Upon written request, the hospital will provide the information necessary for the patient to file the insurance claim, except as prohibited by law.

6. **Third Party Collection**. I acknowledge that the Providers may utilize the services of a third party Business Associate or affiliated entity as an extended business office ("EBO Servicer") for medical account billing and servicing. During the time that the medical account is being serviced by the EBO Servicer, the account shall not be considered delinquent, past due or in default, and shall not be reported to a credit bureau or subject to collection legal proceedings. When the EBO Servicer's efforts to obtain payment have been exhausted due to a number of factors (for e.g., Patient or Guarantor's failure to pay or make a payment arrangement after insurance adjustments and payments have been credited, and/or the insurer's denial of claim(s) or benefits is received), the EBO Servicer will send a final notice letter which will include the date that the medical account may be returned from the EBO Servicer to the Provider. Upon return to the Provider by the EBO Servicer, the Provider may place the account back with the EBO

Servicer, or, at the option of the Provider, may determine the account to be delinquent, past due and in default. Once the medical account is determined to be delinquent it may be subject to late fees, interest as stated, referral to a collection agency for collection as a delinquent account, credit bureau reporting and enforcement by legal proceedings. I also agree that if the Provider initiates collection efforts to recover amounts owed by me or my Guarantor, then, in addition to amounts incurred for the services rendered, Patient or Guarantor will pay, to the extent permitted by law: (a) any and all costs incurred by the Provider in pursuing collection, including, but not limited to, reasonable attorneys' fees, and (b) any court costs or other costs of litigation incurred by the Provider.

7. **Assignment of Benefits.** Patient assigns all of his/her rights and benefits under existing policies of insurance providing coverage and payment for any and all expenses incurred as a result of services and treatment rendered by the Provider and authorizes direct payment to the Provider of any insurance benefits otherwise payable to or on behalf of Patient for the hospitalization or for outpatient services, including emergency services, if rendered. Patient understands that any payment received from these policies and/or plans will be applied to the amount that Patient or Guarantor has agreed to pay for services rendered during this admission and, that Provider will not retain benefits in excess of the amount owed to the Provider for the care and treatment rendered during the admission.

   I understand that any health insurance policies under which I am covered may be in addition to other coverage or benefits or recovery to which I may be entitled, and that Provider, by initially accepting health insurance coverage, does not waive its rights to collect or accept, as payment in full, any payment made under different coverage or benefits or any other sources of payment that may or will cover expenses incurred for services and treatment.

   I hereby **irrevocably appoint** the Provider as my authorized representative to pursue any claims, penalties, and administrative and/or legal remedies on my behalf for collection against any responsible payer, employer-sponsored medical benefit plans, third party liability carrier or, any other responsible third party ("Responsible Party") for any and all benefits due me for the payment of charges associated with my treatment. This assignment shall not be construed as an obligation of the Providers to pursue any such right of recovery. I acknowledge and understand that I maintain my right of recovery against my insurer or health benefit plan and the foregoing assignment does not divest me of such right.

   I agree to take all actions necessary to assist the Provider in collecting payment from any such Responsible Party should the Provider(s) elect to collect such payment, including allowing the Provider(s) to bring suit against the Responsible Party in my name. If I receive payment directly from any source for the medical charges associated with my treatment acknowledge that it is my duty and responsibility to immediately pay any such payments to the Provider(s). I assign and transfer to (1) the hospital and to (2) authorized and attending physicians of the hospital any and all benefits, monies, and sums payable to me for hospitalization, sickness, accident or bodily injury under any hospitalization, sickness, accident medical payments/PIP/bodily injury or uninsured/underinsured motorist policy providing for hospital, medical or physician payments.

8. **Medicare Patient Certification and Assignment of Benefit.** I certify that any information I provide in applying for payment under Title XVIII ("Medicare") or Title XIX ("Medicaid") of the Social Security Act is correct. I request payment of authorized benefits to be made on my behalf to the hospital or hospital-based physician by the Medicare or Medicaid program.

9. **Private Room.** I understand and agree that I am (or Guarantor is) responsible for any additional charges associated with the request and/or use of a private room.

10. **Outpatient Medicare Patients.** Medicare does not provide coverage for "self-administered drugs" or drugs that you normally take on your own, with only a few limited exceptions. If you get self-administered drugs that aren't covered by Medicare Part B, we may bill you for the drug. However, if you are enrolled in a Medicare Part D Drug Plan, these drugs may be covered in accordance with Medicare Part D Drug Plan enrollment materials. If you pay for these self-administered drugs, you can submit a claim to your Medicare Part D Drug Plan for a possible refund.

11. **Communications About My Healthcare.** I authorize my healthcare information to be disclosed for purposes of communicating results, findings, and care decisions to my family members and others I designate to be responsible for my care. I will provide those individuals with a password or other verification means specified by the hospital. I agree I may be contacted by the Provider or an agent of the Provider or an independent physician's office for the purposes of scheduling necessary follow-up visits recommended by the treating physician.

12. **Consent to Telephone Calls for Financial Communications.** I agree that, in order for you, or your EBO Servicers and collection agents, to service my account or to collect any amounts I may owe, I expressly agree and consent that you or your EBO Servicer and collection agents may contact me by telephone at any telephone number I have provided or you or your EBO Servicer and collection agents have obtained or, at any number forwarded or transferred from that number, regarding the hospitalization, the services rendered, or my related financial obligations. Methods of contact may include using pre-recorded/artificial voice messages and/or use of an automatic dialing device, as applicable.

13. **Release of Information.** I hereby permit Providers to release healthcare information for purposes of treatment, payment or healthcare operations. Healthcare information regarding a prior admission(s) at other OUMI affiliated facilities may be made available to subsequent OUMI-affiliated admitting facilities to coordinate Patient care or for case management purposes. Healthcare information may be released to any person or entity liable for payment on the Patient's behalf in order to verify coverage or payment questions, or for any other purpose related to benefit payment. Healthcare information may also be released to my employer's designee when the services delivered are related to a claim under worker's compensation. If I am covered by Medicare or Medicaid, I authorize the release of healthcare information to the Social Security Administration or its intermediaries or carriers for payment of a Medicare claim or to the appropriate state agency for payment of a Medicaid claim. This information may include, without limitation, history and physical, emergency records, laboratory reports, operative reports, physician progress notes, nurse's notes, consultations, psychological and/or psychiatric reports, drug and alcohol treatment and discharge summary. Federal and state laws may permit this facility to participate in organizations with other healthcare providers, insurers, and/or other health care industry participants and their subcontractors in order for these individuals and entities to share my health information with one another to accomplish goals that may include but not be limited to: improving the accuracy and increasing the availability of my health records; decreasing the time needed to access my information; aggregating and comparing my information for quality improvement purposes; and such other purposes as may be permitted by law. I understand that this facility may be a member of one or more such organizations. This consent specifically includes information concerning psychological conditions, psychiatric conditions, intellectual disability conditions, genetic information, chemical dependency conditions and/or infectious diseases including, but not limited to, blood borne diseases, such as HIV and AIDS.

14. Other Acknowledgements.

15. Personal Valuables. I understand that the hospital maintains a safe for the safekeeping of money and small personal valuables, and the hospital shall not be liable for the loss of or damage to any valuables or money. The liability of the hospital for loss of any personal property that is deposited with the hospital for safekeeping is limited to the greater of five hundred dollars ($500.00) or the maximum required by law, unless a written receipt for a greater amount has been obtained from the hospital by the Patient. The hospital is not responsible for the loss or damage of cell phones, glasses or dentures or personal valuables unless they are placed in the hospital safe in accordance with the terms as stated above.

16. Patient Visitation Rights. I understand that I have the right to receive the visitors whom I or my Patient Representative designates, without regard to my relationship to these visitors. I also have the right to withdraw or deny such consent at any time. I will not be denied visitation privileges on the basis of age, race, color, national origin, religion, gender, gender identity and gender expression, and sexual orientation or disability. All visitors I designate will enjoy full and equal visitation privileges that are no more restrictive than those that my immediate family members would enjoy.

17. Patient Self Determination Act. I have been furnished information regarding Advance Directives (such as durable power of attorney for healthcare and living wills). Please initial or place a mark next to **one** of the following applicable statements:

	I executed an Advance Directive and have been requested to supply a copy to the hospital		I have not executed an Advance Directive, wish to execute one and have received information on how to execute an Advance Directive		I have not executed an Advance Directive and do not wish to execute one at this time

18. Consent to Authorize Use of Email and Text for Patient Billing and Financial Obligations. By my consent below, I authorize the use of any email address or cellular telephone number I provide for receiving **information** relating to my financial obligations, including, but not limited to, payment reminders, delinquent notifications, instructions and links to hospital Patient billing information. I understand and acknowledge that my patient account number may appear in the email or test. I consent to receiving discharge instructions and other healthcare communications at the email or text address I have provided or you or your EBO Servicer have obtained or, at any text number forwarded or transferred from that number.

Acknowledge:_____(Initial) I consent to use of email for Patient billings and financial obligation purposes.

Acknowledge:_____(Initial) I consent to use of text for Patient billings and financial obligation purposes.

19. Notice of Privacy Practices. I acknowledge that I have received the hospital's Notice of Privacy Practices, which describes the ways in which the hospital may use and disclose my healthcare information for its treatment, payment, healthcare operations and other prescribed and permitted uses and disclosures. I understand that this information may be disclosed electronically by the Provider and/or the Provider's business associates. I understand that I may contact the hospital Privacy Officer designated on the notice if I have a question or complaint.

Acknowledge:_____(Initial)

20. Acknowledgement of Notice of Patient Rights and Responsibilities. I have been furnished with a Statement of Patient Rights and Responsibilities ensuring that I am treated with respect and dignity and without discrimination or distinction based on age, gender, disability, race, color, ancestry, citizenship, religion, pregnancy, sexual orientation, gender identity or expression, national origin, medical condition, marital status, veteran status, payment source or ability, or any other basis prohibited by federal, state, or local law.

Acknowledge: AP (Initial)

21. Acknowledgement: I have been given the opportunity to read and ask questions about the information contained in this form, **specifically** including but not limited to the financial obligation's provisions and assignment of benefit provisions, and I acknowledge that I either have no questions or that my questions have been answered to my satisfaction and that I have signed this document freely and without inducement other than the rendition of services by the Providers.

Acknowledge: AP (Initial)

This consent applies to services you receive from all healthcare providers listed above, occurring or commencing within one year from the date of this agreement.

Date: 2/9/2022	I, the undersigned, as the Patient or Patient Representative, or, for a minor/incapacitated Patient, as the legal guardian, hereby certify I have read, and fully and completely understand this Conditions of Admission and Authorization for Medical treatment, and that I have signed this Conditions of Admission and Authorization for Medical Treatment knowingly, freely, voluntarily and agree to be bound by its terms. I have received no promises, assurances, or guarantees from anyone as to the results that may be obtained by any medical treatment or services. If insurance coverage is insufficient, denied altogether, or otherwise unavailable, the undersigned agrees to pay all charges not paid by the insurer.

Consulting Service
NICU
Responsible Faculty:
Dr. Chrusciel
Neurology Consult Note

REASON: Shaking, concerning for seizures 2/2 to suspected hypoxic ischemic event vs sepsis (etiology to be determined)

CC: "His legs were twitching and he wasn't taking breaths"

HPI:
1-day-old baby boy born at 40 weeks of gestation via artificial rupture of membranes, delivery significant for meconium stained amniotic fluid, transferred from Durant Medical Center 2/8/22 to OU Children's Center NICU for higher level of workup and care after presenting with low APGARs of 2, 6, and 7 and spells of apnea and leg twitching concerning for possible seizures due to a possible hypoxic ischemic event vs sepsis, etiology to be determined.

History was obtained mostly from the patient's father Brandon Blue as the patient's mother, Tatum is still at Durant Medical Center due to significant hemorrhaging from delivery. The pregnancy was overall uneventful with the mother being adherant to prenatal vitamins and checkups. She briefly had to be monitored for preeclampsia however workup was negative. Delivery was induced 2/8/22 due to prolonged labor with meconium stained amniotic fluid appreciated on delivery. The baby was not taking breaths or responding to nasal suctioning or stimulation and briefly required PPV which was provided for 3minutes however continued to have irregular respirations. The baby was then taken to nursery and CPAP was initiated. Grunting subsided and he was weaned to room air by approximately. Oral feedings were started and the baby continued to do well. However, at approximately 10am 2/8/22 the baby was noted to have apnea spells with color change and possible twitching of extremities concerning for seizures, which led to transfer to OU Children's Center.

En route to being transferred, the baby had another episode and was
was given loading dose of phenobarbital. NF team arrived to take over care, noted infant to be borderline lethargic following phenobarbital dose for which normal saline was given in route for soft blood pressures. The baby did not have further activity throughout transport and was transferred to NICU on room air.

However shortly before neurology was consulted, the patient exhibited another episode for

which he was provided another dose of phenobarbitol, thereby receiving a total of 40mg/kg of phenobarbital since arrival. Upon discussion with Dr. Chrusciel before my evaluation, phenobarbitol was advised to be held until a level is obtained and to not re-administer if the level is elevated.

On my evaluation, the patient was crying due to being touched and moved with IV access being obtained and did not have further episodes throughout my encounter, lasting approximately 40 minutes.

PMHx:
-Born at 40 weeks via artificial rupture of membranes
-No complications during pregnancy or abnormalities on ultrasound visits

PSHx:
-None

SOCHx:
-Lives with parents, Brandon and Tatum Blue. 1st baby and pregnancy for the parents.
-Smoke free environment; Brandon vapes away from Tatum

FAMHx:
-Brandon does not have any known medical conditions; grandfather had DM
-Tatum does not have medical diagnoses and he is not aware of medical conditions in her family
-He was able to confirm neither he nor Tatum have family history of seizures, strokes, or known clotting disorders, Tatum however is being treated for post partum hemorrhage at this time.

EXAMINATION:
-General: pink complexion, on room air, crying while being moved with IV placement
-Cardio: RRR
-Pulm: on room air, no dyspnea or apnea appreciated
-Abd: soft, nondistended
-Skin: petechial looking rash along groin, back, and forehead, blanching to deep touch
Neuro:
Mental status: cries while being moved around however was consolable with stroking and pacifier
CN2-12: pupils equal and reactive, dolls eye intact, no fixed gaze, symmetric facial muscle movements when crying, palatte elevates, tongue appears midline
Motor: normal tone, moving all extremities spontaneously without signs of weakness/flaccidity
Sensory: withdraws toes to stroking
Reflexes: intermittent suck reflex, moro reflex intact, no rooting reflex appreciated, palmar reflex intact bilaterally, babinski intact bilaterally
Coord: no tremors appreciated on exam

LABS/IMAGING: reviewed in meditech/centricity

IMPRESSION:
-Seizures in the setting of hypoxic ischemic event vs sepsis, etiology to be determined

RECOMMENDATIONS:

Patient: BLUE,BB-TATUM Unit#: E003047593
Date: 02/09/22 Acct#: E00677497957

-Will advise no further doses of phenobarbitol as the patient received 40mg/kg total today
-Please obtain phenobarbitol levels in the meanwhile
-Continue infectious workup in the meanwhile including LP
-Will monitor for head ultrasound reading for now before proceeding with further imaging studies
-If seizure occurs again, please give 20mg/kg of keppra; will defer maintanence dosing based on how frequently seizures occur/if they re-occur
-If seizures do not settle after load of keppra, please call child neurology resident on call for the baby to be examined and then consider other options of treatment (fosphenytoin, phenobarbitol (depending on level))

Patient was discussed in detail with Dr. Chrusciel and will be staffed in the morning. Please page the child neurology resident for any further concerns.

Rabbani,Bahram X DO 02/09/22 0611:
Neurology Resident Addendum
Neurology Resident Addendum
Patient was personally seen and examined by me today. Please see the following addendum below for further details.

SUB:
1-day-old baby boy born at 40 weeks of gestation via artificial rupture of membranes, delivery significant for meconium stained amniotic fluid, transferred from Durant Medical Center 2/8/22 to OU Children's Center NICU for higher level of workup and care after presenting with low APGARs of 2, 6, and 7 and spells of apnea and leg twitching concerning for possible seizures due to a possible hypoxic ischemic event vs sepsis s/p phenobarbital loads (30 mg/kg in total).

02/09: Patient had 1-2 more seizures overnight. Given Keppra 20 mg/kg load once. No further events since 0700. PHB 29.4, CSF WBC 25, RBC ~50k, elevated neutrophils, glucose 62 (serum ~60-80), protein 113.

EXAM:
GEN: somnolent
HEENT: ant fontanelle soft, open, flat
ABD: soft

NEURO:
Lang/Ment: non-verbal, somnolent, arouses to touch
CN: pupils equally round and reactive to light; oculocephalic reflex present, symm face, responds

to touch, tongue midline on protrusion
Motor: normal tone, healthy flexed posture, moving all extremities
Sens: responds appropriately to touch/tickle
Coord: no abnormal movements
Reflexes: 2+, plantar extensor response bilaterally, +grasp, +rooting
Gait: deferred

IMPRESSION:
- Apnea episodes concerning for seizure in setting of r/o sepsis vs HIE (low suspicion for HIE?)

RECOMMENDATION:
- Neurochecks
- Seizure/aspiration precautions
- HUS negative for hemorrhage
- **MRI brain W/O can be performed on day 4 of life**
- Please start phenobarbital maintenance 5 mg/kg/day (PHB level 29 as of 02/09)
- For more seizures, can give another PHB 10 mg/kg load and check another PHB level

Discussed with attending physician of record during morning rounds.

CHRUSCIEL,DEEPTI G 02/09/22 1607:

Neurology Attending Note

Attending Note

I have interviewed and examined this patient and personally reviewed all labs and studies. I discussed the patient's management with the residents and reviewed the resident's note. I have discussed care with the patient and family who voiced understanding. I agree with the documented findings and plan of care unless amended below.

Parker is a first day of life baby boy born at 40 weeks with uncomplicated pregnancy with meconium stained fluid. APGARs of 2, 4, 7. He has spells of apnea and leg twitching concerning for seizures due to a possible hypoxic ischemic event vs metabolic or genetic etiology.

On exam:
On room air, AFSF
Reactive to light stimulation
Pupils equal, facies symmetric
Normal tone, flexed position
2/4 patellar reflex
Symmetric movement

I recommend EEG. Phenobarbital level was 29. If more seizures occur can load with 10 mg/kg otherwise start maintenance of 5 mg/kg/day. Would do MRI of the brain at 4 days life or older. Would consider metabolic workup. Will continue to follow.

Addendum 1: 02/09/22 1423 by Rabbani,Bahram DO

Metabolic work-up:
- Pyruvate
- Serum amino acids
- Urine organic acids
- Ammonia

EEG: frequent sharp rhythmic discharges at C4 and T5/O1 with one possible EEG-push button correlate. Spoke to NICU fellow, will change EEG to continuous (already discussed with EEG attending and peds neuro attending, and ordered) and give PHB 10 mg/kg load with PHB level after. Continue PHB 5 mg/kg/day 24 hours after the load (please do not exceed 10 mg/kg/day)

Electronically Signed by Rabbani,Bahram DO on 02/09/22 at 1432

FELLOW'S PROCEDURE NOTE

PROCEDURES AND TREATMENTS
2/9 5:30 (day 0) Lumbar puncture (N.Dasari, MD)
1. No contraindications were present: instability, increased ICP, coagulopathy
2. Patient's condition discussed with attending physician who was present for the procedure..
Exception: Dr.Dannaway was present on the unit at the time.
3. Written informed consent was obtained from the family.. Exception: Verbal consent
taken over the phone.
4. Time out taken: Patient's ID and procedure confirmed with bedside nurse.
5. Analgesic administered prior to procedure.. Exception: Applied EMLA cream at the site.
6. Procedure was performed as described below.
7. Orders were written for CSF studies.
8. Family was updated with infant's condition after procedure completed.

Indication: Seizures The infant was placed in the lateral decubitus position with spine flexed
and normal HR and oxygen saturation. The iliac crests were identified as the landmark for
L3 to L5. The lumbar region was swabbed with antiseptic and draped in sterile manner. The
puncture area was infiltrated with lidocaine. A 22-gauge, 1-inch spinal needle was inserted
with stylet in the midline towards the umbilicus. When the needle tip was felt to be in the
spinal canal, the stylet was removed. 4 ml of cerebral spinal fluid dripped by gravity into
various vials. The stylet was replaced and the needle removed. Hemostasis was obtained and
a dressing placed over the puncture site. The skin was cleaned of the antiseptic with water.
There were no complications, and the infant tolerated the procedure well. Estimated blood
loss was <1 ml. CSF specimens were obtained and sent to the lab as follows: Vial 1 was sent
for gram stain, culture, and sensitivities Vial 2 was sent for protein and glucose levels Vial 3
was sent for cell count and differential Vial 4 was sent for HSV PCR

NEONATAL SERVICES DAILY PROGRESS NOTE
3050 gram, 40 + 1/7 week AGA male => 3070 grams; corrected gestational age 40 + 2/7 weeks.
Active Problems: r/o sepsis (identified 2/8/22)
Seizure disorder (identified 2/8/22)

PHYSICAL EXAM (at 2/9/22 8:15)
Weight - 3070 grams (+20 grams) - 11%ile ; Z-score = -1.23
Length - 52.0 cm - 60%ile ; Z-score = 0.26
Head circumference - 34.2 cm - 24%ile ; Z-score = -0.7
Vital Signs: HR - 156, RR - 40, BP - 61/36 (mean 45), O2 Sat - 96%, Temp - 36.8 degrees
General: Infant in room air and in no distress. Skin pink, warm, and dry.
HEENT: Anterior fontanelle open, soft, and flat with sutures approximated. Molding and caput with redness to scalp from presentation with petechiae noted. Eyes clear. Pupils equally round and reactive to light. Oral mucosa pink and moist, palate intact. Ears in normal shape and position.
Chest: Chest rise symmetrical with clear breath sounds bilaterally.
Heart: Normal sinus rhythm, normal perfusion and pulses, no murmur.
Abdomen: Soft and non-distended, non-tender with active bowel sounds.
Genitals: Normal male genitalia. Testes descended bilaterally.
Anus: Patent anus in normal position.
Skeletal: Normal clavicles and normal hip exam. Spine intact.
Extremities: Moving all extremities equally.
Neuro: Alert, hypotonic, normal tone for gestational age, normal primitive reflexes. Infant appropriately reactive to exam.

FLUIDS, ELECTROLYTES, NUTRITION
Objective: Weight today 3070 grams, up 20 grams from 2/8.
On a radiant warmer.
Input: 105 ml/9 hours = 92 ml/kg/day (all parenteral); 28 cal/kg/day.
Output: Urine - 45 ml/9 hrs (1.6 ml/kg/hr).
Stools - 0 (Last stool: none recorded).
The baby is on TPN which was started yesterday.
Protein - 2.2 gram/kg/day; Fat - 0.0 gram/kg/day; Carbohydrate - 5.6 gram/kg/day.
FEEDINGS: currently NPO; no residuals.
From 2/9 8:35: Na 139, K 3.5, Cl 103, Bicarb 18.0, Glucose 59, Ca 9.1, Phos 4.8, BUN 11.0, Creat 0.8.
From 2/8 22:11: Mg 1.5.
From 2/9 2:35: Accuchek - approximately 93.
Appraisal: Infant is NPO, receiving SNAP 10 @ 80 ml/kg/day. Electrolytes as listed. Voiding and meconium at birth.

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

Plan: Continue NPO, supplement with SNAP 10 for a TFG of 80 ml/kg/day, and gavage tube to gravity.
Will consider starting trophic feeds this evening.
Will continue to assess nutritional intake, output, and growth trend.

RESPIRATORY
Summary: Infant with meconium at delivery required PPV, suctioning and transitioned to CPAP. Eventually transitioned to RA.
Infant had apneic spell at 10 HOL concerning for seizures.
Objective: Respiratory rate for yesterday: average 48, range 37-66; for the past 8 hours: average 41, range 37-47.
O2 sats for yesterday: average 97, range 93-100; for the past 8 hours: average 98, range 96-100.
On no respiratory support.
A and B events yesterday - 4 (4 severe; none associated with feeding). No A and B events today.
Appraisal: Infant with meconium at delivery required PPV and transitioned to CPAP. Eventually transitioned to RA. Infant had apneic spell at 10 HOL concerning for seizures. Has been stable on room air.
Plan: Continue to monitor and obtain blood gas for metabolic component this evening.

HEMATOLOGY
Objective: From 2/9 8:35: Hgb 16.0, Hct 43.8, Plts 208,000, WBC 15,920 - 68 polys, 3 bands, 17 lymphs, 10 monos, 2 eos; AGC = 11,303, I:T = 0.04.
Appraisal: Heme Labs stable.
Plan: Continue to monitor.
Limit lab draws as able.

BILIRUBIN
Objective: Serum bili 5.1 (direct 0.3) on 2/9 8:35.
Mother's blood type B Positive.
The infant has not been treated with phototherapy.
The maximum total bilirubin was 5.1 (direct 0.3) on 2/9.
Appraisal: Mom's blood type is B+
Infant has not been treated with phototherapy and below threshold.
Plan: Repeat T. Bili in AM.

INFECTIOUS DISEASE
Objective: Temperature range over the past day: 36.8-37.2 degrees; temperature over the past 8 hours: 36.8-37.2 degrees.
From 2/9 8:35: CRP - <3.0.
From 2/9 5:20: CEREBRAL SPINAL FLUID
From 2/8 5:30: CSF 49,750 RBCs, 25 WBCs (87 polys, 10 lymphs, 3 monos), protein 113, glucose 62.
Appraisal: Infectious workup started due to concerns of seizures. Maternal labs reassuring. Blood and CSF cultures sent. CBC and CRP reassuring. HSV CSF 1/2 negative, HSV PCR blood pending. Infant started on Ampicillin, Amikacin and Acyclovir.
Plan: Continue to monitor
Follow cultures until final.
Continue antibiotics and trend labs in the am to determine treatment length.

CARDIOVASCULAR

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

Objective: Heart rate for the past 8 hours: average HR 141, range 120-156.
Blood pressure for the past 8 hours: average cuff BP - 55/37(43 mean), range - 44-62/28-48(35-53 mean).
Appraisal: Was hypotensive en route received NS bolus x1. Infant started on dopamine 5 mcg/kg/min. MAP have ranged from 31-44
Plan: Continue to monitor, will attempt to place dopamine on hold.
Goal MAPS 35-45

NEUROLOGY
Objective: Over the past 24 hours, Phenobarbital level: 2/9 at 8:35 - 29.4 No medications were given.
Appraisal: Infant admitted due to concern for seizure activity at RH, loaded with phenobarbital at RH at 12 HOL then transferred here for further evaluation. On admission, infant presented with seizure like activity given an additional phenobarb and Keppra. LP obtained, see ID. Neurology consulted, recommended EEG and infectious workup. EEG with frequent sharp rhythmic discharges at C4 and T5/O1. Given additional 10 mg/kg phenobarb with maintenance dosing ordered. HUS obtained normal. Neurology recommended continuing EEG and starting a metabolic workup.
Plan: Continue to monitor
Continue EEG
Continue phenobarb
Continue to follow neurology recommendations. MRI at 4 days of life.

IMMUNIZATIONS
Appraisal: Hepatitis B #1 given on 2/8 at RH.
Plan: Continue to follow AAP guidelines for vaccine schedule.

GENETICS, ENDOCRINE, METABOLIC
Summary: Family history of Galactosemia.
Objective: Metabolic screening tests are pending from 2/9.
Ca 9.1, Phos 4.8 (from 2/9), Alkaline phosphatase 123 (from 2/8).
From 2/9 11:55: AMMONIA - 83.
Specimen moderately hemolyzed.
Hemolyzed Specimen-Results may be affected.
Appraisal: State NB metabolic screen sent at 24 hours of life. Pending results.
Metabolic workup in progress due to seizures.
Workup includes: Ammonia level 83, pyruvic acid (pending), serum AA (pending), UA Organic acid and reducing substances (pending)
Plan: Continue to monitor.
Follow results of labs pending.
Follow results the NBS and repeat per protocol.

SOCIAL
Appraisal: Mom and Dad have been updated at bedside, questions answered.
Plan: Continue to update on plan of care.

IN-PATIENT DEVELOPMENTAL INTERVENTIONS
Appraisal: Infant at risk of developmental delays due hospitalization and seizures.
Plan: Continue to follow developmental needs while in the unit.

CURRENT MEDICATIONS
Acyclovir, 60 mg IV q8h (19.7 mg/kg/dose, 59 mg/kg/day) started on 2/8/22

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

Amikacin, 37 mg IV q24h (12.1 mg/kg/day) started on 2/8/22

Ampicillin, 300 mg IV q12h (98.4 mg/kg/dose, 197 mg/kg/day) started on 2/8/22
DOPamine, 3.2 mg in 1 ml @ 0.29 ml/hour IV (5 mcg/kg/minute) started on 2/9/22
PHENObarbital, 15 mg IV q24h (4.9 mg/kg/day) started on 2/9/22

I personally examined the patient, reviewed and updated the history and assessment, and developed the plan of care with the multidisciplinary team as documented in this note. Jumoke A. Ogunfolu, NNP Student assisted me in the care of the patient and preparation of this note.

The patient requires intensive monitoring of cardiorespiratory stability, growth, nutrition, and I and O.

Neurology Interim Note

Neurology Interim Note
continuous EEG reviewed until 16:11 pm

- Abnormal continous EEG with presence of frequent subclinical focal seizures; R central (frequent)> rare left posterior temporal occipital. Right central seizures were very frequent last one was at 16:05 pm. Most push button events corresponded to seizure (although on video it was not sure why button was push since no abnormal movement were see on video). The neurology consult team was informed of these findings at the time of review.
We will continue to monitor EEG periodically.

Electronically Signed by Sebasigari,Denise DO on 02/09/22 at 1617

Addendum 1: 02/09/22 2120 by Sebasigari,Denise DO

continuous EEG reviewed from 16:11 pm to 21:13 pm

- Abnormal continous EEG with presence of frequent subclinical focal seizures; R central (frequent)> rare left posterior temporal occipital. Right central seizures were very frequent. Seizure stopped from 16:05 pm to 19:49 pm and started again occuring every 5-10 minutes. Some push button events corresponded to seizure (although on video it was not sure why button was push since no abnormal movement were see on video) and some push button had no EEG correlate. The neurology consult team was informed of these findings at the time of review.
Official report tomorrow AM .

Electronically Signed by Sebasigari,Denise DO on 02/09/22 at 2127

007122602 US ECHOENCEPHALOGRAPHY	76506

- US ECHOENCEPHALOGRAPHY February 9, 2022

HISTORY: One-day-old male, term infant, apnea, r/o IVH

COMPARISON: None

TECHNIQUE: Multiple axial, sagittal and coronal sonographic images of the brain were obtained.

FINDINGS:

Corpus callosum is formed. Midline structures are nondisplaced. Brain parenchyma shows no prominent mass effect. Sulcation pattern is symmetric. No prominent abnormal parenchymal echogenicity is demonstrated. Posterior fossa cerebellar hemispheres and vermis show no significant abnormality.

There are slitlike lateral ventricles. No large extra-axial fluid collection causing mass effect is identified.

IMPRESSION:

No acute intracranial process by ultrasound.

I have personally viewed the images and/or data and approve the report.

Name: BLUE,BB-TATUM
Account Number: E00677497957
Unit Number: E003047593
Room: EU.7172
Date Of Birth: 02/08/22
Attending Doctor: Dannaway,Douglas MD
Date: 02/10/22

NEONATAL SERVICES DAILY PROGRESS NOTE
3050 gram, 40 + 1/7 week AGA male => 3010 grams; corrected gestational age 40 + 3/7 weeks.
Active Problems: r/o sepsis (identified 2/8/22)
Seizure disorder (identified 2/8/22)

PHYSICAL EXAM (at 2/10/22 9:00)
Weight - 3010 grams (-60 grams) - 8%ile ; Z-score = -1.43
Vital Signs: HR - 153, RR - 32, BP - 57/30 (mean 36), O2 Sat - 93%, Temp - 37.0 degrees
General: Infant in room air and in no distress. Skin pink, warm, and dry.
HEENT: Anterior fontanelle open, soft, and flat with sutures approximated. Head covered with CFM elctrodes and gauze wrap. Eyes clear. Pupils equally round and reactive to light. Oral mucosa pink and moist, palate intact. Ears in normal shape and position.
Chest: Chest rise symmetrical with upper airway congestion bilaterally.
Heart: Normal sinus rhythm, normal perfusion and pulses, no murmur.
Abdomen: Soft and non-distended, non-tender with active bowel sounds.
Extremities: Moving all extremities equally.
Neuro: Resting, improving tone, normal primitive reflexes. Uncoordinated suck, little interest in a pacifier. Delayed gag on previous exam.

FLUIDS, ELECTROLYTES, NUTRITION
Objective: Weight today 3010 grams, down 60 grams from 2/9. Lost 20.0 grams/day/2 days. Down 1% below birthweight.
On a radiant warmer.
Input: 269 ml = 88 ml/kg/day (all parenteral); 39 cal/kg/day.
Output: Urine - 191 ml/day (2.6 ml/kg/hr).
Stools - 0 (Last stool: none recorded).
The baby has been on TPN for 2 days from 2/8. A PICC-Right arm was placed yesterday.
Protein - 3.1 gram/kg/day; Fat - 0.0 gram/kg/day; Carbohydrate - 7.9 gram/kg/day.
FEEDINGS: currently NPO; no residuals.
From 2/10 2:47: Na 139, K 4.5, Cl 104, Bicarb 20.0, Glucose 92, Ca 9.3, Phos 5.1, BUN 19.0, Creat 0.6.
From 2/8 22:11: Mg 1.5.
From 2/9 2:35: Accuchek - approximately 93.
Appraisal: Infant is NPO, receiving SNAP 10 @ 80 ml/kg/day. Electrolytes as listed. Voiding and meconium at birth. Infant is -1% below birthweight.
Plan: Start enteral feeds at 20 ml/kg of Human Milk or Similac term, supplement with TPN/SMOF for a TFG of 100 ml/kg/day.
Will continue to assess nutritional intake, output, and growth trend.

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

RESPIRATORY
Objective: Respiratory rate for yesterday: average 37, range 27-60; for the past 8 hours: average 31, range 27-34.
O2 sats for yesterday: average 97, range 93-100; for the past 8 hours: average 94, range 93-97.
On no respiratory support.
From 2/9 17:06: Capillary blood gases: pH 7.41, pCO2 37, pO2 42, base excess -0.9.
A and B events yesterday - 5 (5 mild; none associated with feeding). No A and B events today.
Appraisal: Infant with meconium at delivery required PPV and transitioned to CPAP. Eventually transitioned to RA. Infant had apneic spell at 10 HOL concerning for seizures. Has remained stable on room air. Infant had few events overnight that required no intervention.
Plan: Continue to monitor.

HEMATOLOGY
Objective: From 2/10 2:47: Hgb 16.7, Hct 45.7, Plts 239,000, WBC 15,600 - 71 polys, 14 lymphs, 9 monos, 4 eos; AGC = 11,076, I:T = 0.00.
Appraisal: Heme Labs stable.
Plan: Continue to monitor.
Limit lab draws as able.

BILIRUBIN
Objective: Serum bili 5.2 on 2/10 2:47.
Mother's blood type B Positive.
The infant has not been treated with phototherapy.
The maximum total bilirubin was 5.2 on 2/10 and the maximum direct bilirubin was 0.3 on 2/9.
Appraisal: Mom's blood type is B+. T bili remain below threshold of treatment.
Plan: Continue to monitor clinically.

INFECTIOUS DISEASE
Objective: Temperature range over the past day: 36.3-37.2 degrees; temperature over the past 8 hours: 36.3-37.0 degrees.
From 2/10 2:47: CRP - <3.0.
From 2/9 5:20: CEREBRAL SPINAL FLUID
From 2/8: CSF 49,750 RBCs, 25 WBCs (87 polys, 10 lymphs, 3 monos), protein 113, glucose 62.
Appraisal: Infectious workup started due to concerns of seizures. Maternal labs reassuring. Blood and CSF cultures sent. CBC and CRP reassuring. HSV CSF 1/2 negative, HSV PCR blood negative. Infant started on Ampicillin, Amikacin and Acyclovir. CSF and blood culture NGTD.
Plan: Continue to monitor
Follow cultures until final.
Continue antibiotics and attending to speak with Peds ID to determine treatment length.

CARDIOVASCULAR
Objective: Heart rate for yesterday: average HR 143, range 120-176; for the past 8 hours: average HR 147, range 137-157.
Blood pressure for yesterday: average cuff BP - 55/33(41 mean), range - 44-67/25-48(35-53 mean); for the past 8 hours: average cuff BP - 55/30(38 mean),

range - 52-58/28-32(36-41 mean).
Appraisal: Hemodynamically stable.
Plan: Continue to monitor clinically.

NEUROLOGY
Objective: Over the past 24 hours, Phenobarbital level: 2/9 at 17:15 - 39.1 No medications were given.
Appraisal: Infant admitted due to concern for seizure activity at RH, loaded with phenobarbital at RH at 12 HOL then transferred here for further evaluation. On admission, infant presented with seizure like activity given an additional phenobarb and Keppra. LP obtained, see ID. Neurology consulted, recommended EEG and infectious workup. EEG with frequent sharp rhythmic discharges at C4 and T5/O1. Given additional 10 mg/kg phenobarb with maintenance dosing ordered. HUS obtained normal. Neurology recommended continuing EEG and starting a metabolic workup.
Overnight, EEG concerning for more seizures, infant was given a one time loading dose of Fosphenytoin 20 mg/kg. If infant continues to have more seizures, consider genetic workup.
Plan: Continue to monitor
Continue EEG
Continue phenobarb, Change dose to 7.5 mg BID (2.5 mg/kg/dose)
Continue to follow neurology recommendations. MRI at 4 days of life.

IMMUNIZATIONS
Appraisal: Hepatitis B #1 given on 2/8 at RH.
Plan: Continue to follow AAP guidelines for vaccine schedule.

GENETICS, ENDOCRINE, METABOLIC
Objective: Metabolic screening tests are pending from 2/9.
Ca 9.3, Phos 5.1 (from 2/10), Alkaline phosphatase 123 (from 2/8).
From 2/9 11:55: AMMONIA - 83.
Specimen moderately hemolyzed.
Hemolyzed Specimen-Results may be affected.
Appraisal: State NB metabolic screen sent at 24 hours of life. Pending results.
Metabolic workup in progress due to seizures.
Workup includes: Ammonia level 83, pyruvic acid (pending), serum AA (pending), UA Organic acid and reducing substances (pending)
Plan: Continue to monitor.
Follow results of labs pending.
Follow results the NBS and repeat per protocol.

SOCIAL
Appraisal: Mom and Dad have been updated at bedside during rounds, questions answered.
Plan: Continue to update on plan of care.

IN-PATIENT DEVELOPMENTAL INTERVENTIONS
Appraisal: Infant at risk of developmental delays due hospitalization and seizures.
Plan: Continue to follow developmental needs while in the unit.

CURRENT MEDICATIONS
Acyclovir, 60 mg IV q8h (19.7 mg/kg/dose, 59 mg/kg/day) started on 2/8/22
Amikacin, 37 mg IV q24h (12.1 mg/kg/day) started on 2/8/22

Ampicillin, 300 mg IV q12h (98.4 mg/kg/dose, 197 mg/kg/day) started on 2/8/22

PHENObarbital, 15 mg IV q24h (4.9 mg/kg/day) started on 2/9/22

I personally examined the patient, reviewed and updated the history and assessment, and developed the plan of care with the multidisciplinary team as documented in this note. Jumoke A. Ogunfolu, NNP Student assisted me in the care of the patient and preparation of this note.

Intensive monitoring of cardiorespiratory stability, growth, nutrition, and I and O is needed.

Neurology Progress Note

Subjective
MEDICAL STUDENT NOTE
2-day old male infant born at 40 wks via AROM with mecomnium stained amniotic fluid, transferred from Durant after APGAR of 2-6-7, spells of apnea and leg twitching concerning for possible seizures, hypoxic-ischemic event vs sepsis. Got phenobarbitol 30mg/kg at Durant.

EEG here showed focal seizures (frequently right central focus, rarely left posterior temporo-occipital) for which he got another phenobarbitol 10 mg/kg, then later fosphenytoin 20 mg/kg.

Problem List
1. Seizure

Physical Exam
Heart: RRR

Lungs: Coarse crackles, likely referred upper airway sounds

Abdomen: Soft, nontender, normal bowel sounds

Extremeties: Warm, well perfused

Neurological Exam: Sleepy, rousable, fussy. Pupils equal and reactive per nursing, face summetric, tongue midline, responds to touch in face and extremeties. Normal tone, patellar and Babinski reflexes intact, no abnormal spontaneous movements.

RADIOLOGY - RAD CHEST 1 VIEW 02/09 0853
*** Report Impression - Status: SIGNED Entered: 02/09/2022 0946

IMPRESSION:

1. Right upper extremity PICC line distal tip is overlying proximal SVC. Enteric tube distal tip is in the region of GE junction.

2. Lungs shows minimal groundglass haziness with no focal consolidation, pleural effusion or pneumothorax

3. Cardiomediastinal silhouette is stable

4. Visualized osseous structures and soft tissues do not show acute process.
Impression By: DR.PRASAN - SANDEEP PRABHU, MD 247

Assessment
Newborn with focal seizures of unknown etiology, no further seizures after fos load, pending metabolic workup. No evidence of HIE, phenobarbitol levels at the high end of therapeutic. CSF concerning for infection.
Plan
Continue to monitor, if seizures recur, consider adding levotiracetam 10 mg/kg.
Other care per primary team.

Rabbani,Bahram X DO 02/10/22 0908:
Neurology Resident Addendum
Neurology Resident Addendum
Patient was personally seen and examined by me today. Please see the following addendum below for further details.

SUB:
1-day-old baby boy born at 40 weeks of gestation via artificial rupture of membranes, delivery significant for meconium stained amniotic fluid, transferred from Durant Medical Center 2/8/22 to OU Children's Center NICU for higher level of workup and care after presenting with low APGARs of 2, 6, and 7 and spells of apnea and leg twitching concerning for possible seizures due to a possible hypoxic ischemic event vs sepsis s/p phenobarbital loads (30 mg/kg in total).

02/09: Patient had 1-2 more seizures overnight. Given Keppra 20 mg/kg load once. No further events since 0700. PHB 29.4, CSF WBC 25, RBC ~50k, elevated neutrophils, glucose 62 (serum ~60-80), protein 113.

02/10: EEG demonstrated focal seizures from C4 and rarely T5/O1. Patient loaded with phenobarbital 10 mg/kg again with PHB level 39.1 today. Patient had another seizure later that

night and was given fosphenytoin 20 mg/kg once with resolution of spells the rest of the night (per EEG attending's verbal communication with me). Ammonia 83.

EXAM:
GEN: somnolent
HEENT: ant fontanelle soft, open, flat
ABD: soft

NEURO:
Lang/Ment: non-verbal, somnolent, arouses to touch; one apneic event during exam
CN: pupils equally round and reactive to light; oculocephalic reflex present, symm face, responds to touch, tongue midline on protrusion
Motor: normal tone, healthy flexed posture, moving all extremities
Sens: responds appropriately to touch/tickle
Coord: no abnormal movements
Reflexes: 2+, plantar extensor response bilaterally, +grasp, +rooting
Gait: deferred

IMPRESSION:
- Apnea episodes concerning for seizure in setting of r/o sepsis vs HIE (low suspicion for HIE?)

RECOMMENDATION:
- Neurochecks
- Seizure/aspiration precautions
- HUS negative for hemorrhage
- **MRI brain W/O can be performed on day 4 of life**
- **Change phenobarbital to 7.5 mg BID (2.5 mg/kg/dose)**
- For more seizures, can give fosphenytoin 10 mg/kg load
- Metabolic panel pending:
    - Pyruvate -
    - Serum amino acids - pending
    - Urine organic acids - not received yet
    - Ammonia - 83

Discussed with attending physician of record during morning rounds.

CHRUSCIEL,DEEPTI G 02/17/22 1214:

Neurology Attending Note

Attending Note

I have interviewed and examined this patient and personally reviewed all labs and studies. I discussed the patient's management with the residents and reviewed the resident's note. I have discussed care with the patient and family who voiced understanding. I agree with the documented findings and plan of care unless amended below.

Patient: BLUE,BB-TATUM Unit#: E003047593
Date: 02/10/22 Acct#: E00677497957

Patient seen on 2/10/22.

99232: P90 Neonatal seizures, G93.1 HIE

END OF REPORT

OU MEDICAL CENTER
1200 Everett Drive
Oklahoma City, OK 73104

Name: BLUE,BB-TATUM
Account Number: E00677497957
Unit Number: E003047593
Room: EU.7172
Date Of Birth: 02/08/22
Attending Doctor: Dannaway,Douglas MD
Date: 02/11/22

NEONATAL SERVICES DAILY PROGRESS NOTE
3050 gram, 40 + 1/7 week AGA male => 3090 grams; corrected gestational age 40 + 4/7 weeks.
Active Problems: r/o sepsis (identified 2/8/22)
Seizure disorder (identified 2/8/22)

PHYSICAL EXAM (at 2/11/22 7:15)
Weight - 3090 grams (+80 grams) - 10%ile ; Z-score = -1.31
Vital Signs: HR - 133, RR - 36, BP - 52/32 (mean 39), O2 Sat - 97%, Temp - 36.9 degrees
General: Term infant under radiant warmer, in room air and in no distress. Skin pink, warm, and dry.
HEENT: Anterior fontanelle open, soft, and flat with sutures approximated. Head covered with CFM elctrodes and gauze wrap. Eyes clear. Pupils equally round and reactive to light. Oral mucosa pink and moist, palate intact. Ears in normal shape and position.
Chest: Chest rise symmetrical with upper airway congestion bilaterally.
Heart: Normal sinus rhythm, normal perfusion and pulses, no murmur.
Abdomen: Soft and non-distended, non-tender with active bowel sounds.
Extremities: Moving all extremities equally.
Neuro: Resting, responsive to exam with improving tone. Uncoordinated suck, little interest in a pacifier.

FLUIDS, ELECTROLYTES, NUTRITION
Objective: Weight today 3090 grams, up 80 grams from 2/10. Gained 13.3 grams/day/3 days.
On a radiant warmer.
Input: 307 ml.
101 ml/kg/day (enteral - 11%/parenteral - 89%); 52 cal/kg/day (enteral - 15%/parenteral - 85%).
Output: Urine - 92 ml/day (1.3 ml/kg/hr).
Stools - 1 (Last stool: 6 AM 2/11).
The baby has been on TPN for 3 days from 2/8.
Protein - 3.0 gram/kg/day; Fat - 1.1 gram/kg/day; Carbohydrate - 8.5 gram/kg/day.
FEEDINGS: On SAdv20 (0.68 cals/ml) and HM-Col (0.6 cals/ml), 5.0-10 ml; last feed: 10 ml of SAdv20; no residuals. 4 feedings received; 3% nippled. Some gavage feeds given over 15 minutes.
From 2/11 4:10: Na 143, K 4.6, Cl 105, Bicarb 17.0, Glucose 54, Ca 9.7, Phos 6.0, BUN 15.0, Creat 0.4.
From 2/8: Mg 1.5.
Appraisal: Infant started enteral feeds and supplementing with HAL/SMOF @ 100 ml/kg/day. Electrolytes as listed. Voiding and stooling. Weight gain noted

overnight. Infant is 1% above birthweight. Speech consulted, recommended PO feeding attempts twice a day and with cues.
Plan: Advance enteral feeds at 40 ml/kg/d of Human Milk or Similac term, supplement with TPN/SMOF for a TFG of 120 ml/kg/day.
Will continue to assess nutritional intake, output, and growth trend.
Continue to follow speech pathology recommendations.

RESPIRATORY
Objective: Respiratory rate for yesterday: average 34, range 25-52; for the past 8 hours: average 35, range 25-44.
O2 sats for yesterday: average 96, range 92-100; for the past 8 hours: average 98, range 95-100.
On no respiratory support.
From 2/9 17:06: Capillary blood gases: pH 7.41, pCO2 37, pO2 42, base excess -0.9.
No A and B events since 2/10.
Appraisal: Infant has remained stable on room air. Infant had no events overnight.
Plan: Continue to monitor.

HEMATOLOGY
Objective: Blood out so far - 1.4 ml (never transfused).
From 2/10 2:47: Hgb 16.7, Hct 45.7, Plts 239,000, WBC 15,600 - 71 polys, 14 lymphs, 9 monos, 4 eos; AGC = 11,076, I:T = 0.00.
Appraisal: Heme Labs stable.
Plan: Continue to monitor.
Limit lab draws as able.

INFECTIOUS DISEASE
Objective: Temperature range over the past day: 36.5-37.3 degrees; temperature over the past 8 hours: 36.6-36.9 degrees.
From 2/10 2:47: CRP - <3.0.
From 2/9: CEREBRAL SPINAL FLUID
From 2/8: CSF 49,750 RBCs, 25 WBCs (87 polys, 10 lymphs, 3 monos), protein 113, glucose 62.
Appraisal: Infectious workup started due to concerns of seizures. Maternal labs reassuring. Blood and CSF cultures sent. CBC and CRP reassuring. HSV CSF 1/2 negative, HSV PCR blood negative. Infant started on Ampicillin, Amikacin and Acyclovir. CSF and blood culture NGTD.
Plan: Continue to monitor
Follow cultures until final.
Continue antibiotics, discussing length of treatment in rounds.
Per Peds ID recommendation, infant can come off Acyclovir after CSF cultures resulted.

CARDIOVASCULAR
Objective: Heart rate for yesterday: average HR 141, range 120-168; for the past 8 hours: average HR 134, range 126-144.
Blood pressure for yesterday: average cuff BP - 56/32(40 mean), range - 51-61/28-39(36-45 mean); for the past 8 hours: average cuff BP - 57/33(42 mean), range - 52-61/32-33(39-44 mean).
Appraisal: Hemodynamically stable.
Plan: Continue to monitor clinically.

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

NEUROLOGY
Objective: Over the past 24 hours, Phenobarbital level: 2/11 at 4:10 - 36.7 No medications were given.
Appraisal: Seizure workup continues, neurology consulting. Infant has received numerous loads of Phenobarb, Keppra and Fosphenytoin. Continuous EEG in progress. Is currently receiving Phenobarb and Keppra.
Plan: Continue to monitor
Discontinue EEG per neurology.
Continue phenobarb and add Levetiracetam 26 mg/kg/day
If infant continues to have more seizures, give Fosphenytoin 10 mg/kg load.
Continue to follow neurology recommendations. MRI on 2/14.
If infant continues to have seizures, Neurology will consider genetic workup.

IMMUNIZATIONS
Appraisal: Hepatitis B #1 given on 2/8 at RH.
Plan: Continue to follow AAP guidelines for vaccine schedule.

GENETICS, ENDOCRINE, METABOLIC
Objective: Metabolic screening tests are pending from 2/9.
Ca 9.7, Phos 6.0 (from 2/11), Alkaline phosphatase 123 (from 2/8).
From 2/9 11:55: AMMONIA - 83.
Specimen moderately hemolyzed.
Hemolyzed Specimen-Results may be affected.
Appraisal: State NB metabolic screen sent at 24 hours of life. Pending results.
Metabolic workup in progress due to seizures.
Workup includes: Ammonia level 83, pyruvic acid (pending), serum AA (pending), UA Organic acid and reducing substances (pending)
Plan: Continue to monitor.
Follow results of labs pending.
Follow results the NBS and repeat per protocol.

SOCIAL
Appraisal: Mom and Dad have been updated at bedside during rounds, questions answered.
Plan: Continue to update on plan of care.

IN-PATIENT DEVELOPMENTAL INTERVENTIONS
Appraisal: Infant at risk of developmental delays due hospitalization and seizures.
Plan: Continue to follow developmental needs while in the unit.
NICU PT/OT ordered.

CURRENT MEDICATIONS
Acyclovir, 60 mg IV q8h (19.7 mg/kg/dose, 59 mg/kg/day) started on 2/8/22
Amikacin, 37 mg IV q24h (12.1 mg/kg/day) started on 2/8/22
Ampicillin, 300 mg IV q12h (98.4 mg/kg/dose, 197 mg/kg/day) started on 2/8/22
Levetiracetam (Keppra), 40 mg IV q12h (13.1 mg/kg/dose, 26.2 mg/kg/day) started on 2/11/22
PHENObarbital, 15 mg IV q24h (4.9 mg/kg/day) started on 2/9/22

I personally examined the patient, reviewed and updated the history and assessment, and developed the plan of care with the multidisciplinary team as documented in this note. Jumoke A. Ogunfolu, NNP Student assisted me in the care of the patient and preparation of this note.

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

Intensive monitoring of cardiorespiratory stability, growth, nutrition, and I and O is needed.

Neurology Interim Note

Neurology Interim Note
continuos EEG reviewed from 06:00 am to 16:59 pm

- abnormal continuous video encephalogram for age due hemispheric asymmetry, presence of prominent left temporal sharp transients which are concerning for epileptiform discharges which could represent a seizures foci.
- This tracing is a significant improvement form the last tracing.
- No seizures captured
- rare brief rhythmic discharges (BRDs) recorded . These brief rhythmic discharges lie in the ictal-interictal continuum, and the last one was recorded at 10:02 am. T
-There were no push button events recorded.
Official report tomorrow

Electronically Signed by Sebasigari,Denise DO on 02/11/22 at 1705

Neurology Progress Note

Subjective
MEDICAL STUDENT NOTE
2-day old male infant born at 40 wks via AROM with mecomnium stained amniotic fluid, transferred from Durant after APGAR of 2-6-7, spells of apnea and leg twitching concerning for possible seizures, hypoxic-ischemic event vs sepsis. Got phenobarbitol 30mg/kg at Durant.

EEG here showed focal seizures (frequently right central focus, rarely left posterior temporo-occipital) for which he got another phenobarbitol 10 mg/kg, then later fosphenytoin 20 mg/kg.

Problem List
1. Seizure

Physical Exam
Physical Exam
Heart: RRR

Lungs: Coarse crackles, likely referred upper airway sounds

Abdomen: Soft, nontender, normal bowel sounds

Extremeties: Warm, well perfused

Neurological Exam: Sleepy, withdraws to noxious stimuli. Pupils equal and reactive, face summetric, tongue midline, responds to touch in face and extremeties. Normal tone, patellar and Babinski reflexes intact, no abnormal spontaneous movements.

Recent Impressions
RADIOLOGY - RAD CHEST 1 VIEW 02/09 0853
*** Report Impression - Status: SIGNED Entered: 02/09/2022 0946

IMPRESSION:

Patient: BLUE,BB-TATUM Unit#: E003047593
Date: 02/11/22 Acct#: E00677497957

1. Right upper extremity PICC line distal tip is overlying proximal SVC. Enteric tube distal tip is in the region of GE junction.

2. Lungs shows minimal groundglass haziness with no focal consolidation, pleural effusion or pneumothorax

3. Cardiomediastinal silhouette is stable

4. Visualized osseous structures and soft tissues do not show acute process.
Impression By: DR.PRASAN - SANDEEP PRABHU, MD 247

Assessment
Newborn with focal seizures of unknown etiology pending metabolic workup. No evidence of HIE.

Plan
Plan
Continue to monitor, if seizures recur, consider adding levotiracetam 10 mg/kg.
Other care per primary team.

Rabbani,Bahram X DO 02/11/22 1114:
Neurology Resident Addendum
Neurology Resident Addendum
Patient was personally seen and examined by me today. Please see the following addendum below for further details.

SUB:
3-day-old baby boy born at 40 weeks of gestation via artificial rupture of membranes, delivery significant for meconium stained amniotic fluid, transferred from Durant Medical Center 2/8/22 to OU Children's Center NICU for higher level of workup and care after presenting with low APGARs of 2, 6, and 7 and spells of apnea and leg twitching concerning for possible seizures due to a possible hypoxic ischemic event vs sepsis s/p phenobarbital loads (30 mg/kg in total).

02/09: Patient had 1-2 more seizures overnight. Given Keppra 20 mg/kg load once. No further events since 0700. PHB 29.4, CSF WBC 25, RBC ~50k, elevated neutrophils, glucose 62 (serum ~60-80), protein 113.

02/10: EEG demonstrated focal seizures from C4 and rarely T5/O1. Patient loaded with phenobarbital 10 mg/kg again with PHB level 39.1 today. Patient had another seizure later that night and was given fosphenytoin 20 mg/kg once with resolution of spells the rest of the night

Patient: BLUE,BB-TATUM Unit#: E003047593
Date: 02/11/22 Acct#: E00677497957

(per EEG attending's verbal communication with me). Ammonia 83.

02/11: One seizure at 1932. Loaded with levetiracetam 20 mg/kg once. No further seizures (more brief rhythmic discharges, last one 0106).

EXAM:
GEN: somnolent
HEENT: ant fontanelle soft, open, flat
ABD: soft

NEURO:
Lang/Ment: non-verbal, somnolent, arouses to touch; one apneic event during exam
CN: pupils equally round and reactive to light; oculocephalic reflex present, symm face, responds to touch, tongue midline on protrusion
Motor: normal tone, healthy flexed posture, moving all extremities
Sens: responds appropriately to touch/tickle
Coord: no abnormal movements
Reflexes: 2+, plantar extensor response bilaterally, +grasp, +rooting
Gait: deferred

IMPRESSION:
- Apnea episodes concerning for seizure in setting of r/o sepsis vs HIE (low suspicion for HIE?)

RECOMMENDATION:
- Neurochecks
- Seizure/aspiration precautions
- **Okay to discontinue EEG at this time**
- HUS negative for hemorrhage
- MRI brain W/O can be performed on day 4 of life **(may have to wait till Monday, which is OK)**
- Phenobarbital to 7.5 mg BID (2.5 mg/kg/dose)
- **Levetiracetam 40 mg BID (~26 mg/kg/day)**
- For more seizures, can give fosphenytoin 10 mg/kg load **(please check a free phenytoin level now)**
- Metabolic panel pending:
    - Pyruvate
    - Serum amino acids - pending
    - Urine organic acids - not received yet
    - Ammonia - 83

Discussed with attending physician of record during morning rounds.

CHRUSCIEL,DEEPTI G 02/17/22 1215:

Neurology Attending Note

Attending Note

I have interviewed and examined this patient and personally reviewed all labs and studies. I

Patient: BLUE,BB-TATUM Unit#: E003047593
Date: 02/11/22 Acct#: E00677497957

discussed the patient's management with the residents and reviewed the resident's note. I have discussed care with the patient and family who voiced understanding. I agree with the documented findings and plan of care unless amended below.

Patient seen on 2/11/22.

99232: P90 Neonatal seizures, G93.1 HIE

Oklahoma City, OK 73104

Name: BLUE,BB-TATUM
Account Number: E00677497957
Unit Number: E003047593
Room: EU.7172
Date Of Birth: 02/08/22
Attending Doctor: Bergner,Erynn MD
Date: 02/12/22

NEONATAL SERVICES DAILY PROGRESS NOTE
3050 gram, 40 + 1/7 week AGA male => 3220 grams; corrected gestational age 40 + 5/7 weeks.
Active Problems: r/o sepsis (identified 2/8/22)
Seizure disorder (identified 2/8/22)

PHYSICAL EXAM (at 2/12/22 9:20)
Weight - 3220 grams (+130 grams) - 14%ile ; Z-score = -1.08
Vital Signs: HR - 129, RR - 35, BP - 49/22 (mean 33), O2 Sat - 98%, Temp - 36.8 degrees
General: Term infant under radiant warmer, in room air and in no distress. Skin pink, warm, and dry.
HEENT: Anterior fontanelle open, soft, and flat with sutures approximated. Head covered with CFM elctrodes and gauze wrap. Eyes clear. Oral mucosa pink and moist, palate intact. Ears in normal shape and position.
Chest: Chest rise symmetrical with upper airway congestion bilaterally.
Heart: Normal sinus rhythm, normal perfusion and pulses, no murmur.
Abdomen: Soft and non-distended, non-tender with active bowel sounds.
Genitals: Normal male genitalia.
Extremities: Moving all extremities equally.
Neuro: Resting, responsive to exam with mild hypotonia

FLUIDS, ELECTROLYTES, NUTRITION
Objective: Weight today 3220 grams, up 130 grams from 2/11. Gained 50.0 grams/day/3 days.
On a radiant warmer.
Input: 382 ml.
125 ml/kg/day (enteral - 30%/parenteral - 70%); 76 cal/kg/day (enteral - 33%/parenteral - 67%).
Output: Urine - 115 ml/day (1.6 ml/kg/hr) and 1.
Stools - 0 (Last stool: 6 AM 2/11).
The baby has been on TPN for 4 days from 2/8. A PICC-Right arm has been in place for 3 days from 2/9.
Protein - 3.1 gram/kg/day; Fat - 3.0 gram/kg/day; Carbohydrate - 10.1 gram/kg/day.
FEEDINGS: On SAdv20 (0.68 cals/ml), 10-15 ml; last feed: 15 ml; no residuals. 8 feedings received; 26% nippled. Gavage feeds given over 15-30 minutes.
From 2/11 4:10: Na 143, K 4.6, Cl 105, Bicarb 17.0, Glucose 54, Ca 9.7, Phos 6.0, BUN 15.0, Creat 0.4.
From 2/8: Mg 1.5.
Appraisal: Infant tolerating advancing enteral feeds of Sim Term with supplemental with HAL/SMOF @ 120 ml/kg/day. Electrolytes as listed. Voiding and stooling. Weight gain noted overnight. Speech consulted, recommended PO feeding

attempts twice a day and with cues.
Plan: Advance enteral feeds to 60 ml/kg/d of Similac term, supplement with TPN/SMOF for a TFG of 130 ml/kg/day.
Will continue to assess nutritional intake, output, and growth trend.
Continue to follow speech pathology recommendations.

RESPIRATORY
Objective: Respiratory rate for yesterday: average 40, range 27-59; for the past 8 hours: average 35, range 30-42.
O2 sats for yesterday: average 96, range 92-100; for the past 8 hours: average 95, range 92-100.
2/12 8:00: RA.
From 2/9 17:06: Capillary blood gases: pH 7.41, pCO2 37, pO2 42, base excess -0.9.
No A and B events since 2/10.
Appraisal: Infant has remained stable on room air.
Plan: Continue to monitor.

HEMATOLOGY
Objective: Blood out so far - 5.4 ml (never transfused).
From 2/10: Hgb 16.7, Hct 45.7, Plts 239,000, WBC 15,600 - 71 polys, 14 lymphs, 9 monos, 4 eos; AGC = 11,076, I:T = 0.00.
Appraisal: Heme Labs stable.
Plan: Continue to monitor.
Limit lab draws as able.

BILIRUBIN
Objective: Serum bili 5.2 on 2/10.
Mother's blood type B Positive.
The infant has not been treated with phototherapy.
The maximum total bilirubin was 5.2 on 2/10 and the maximum direct bilirubin was 0.3 on 2/9.
Appraisal: Mom's blood type is B+. T bili remains well below threshold of treatment.
Plan: Continue to monitor clinically.

INFECTIOUS DISEASE
Objective: Temperature range over the past day: 36.5-37.2 degrees; temperature over the past 8 hours: 36.8-37.1 degrees.
From 2/10: CRP - <3.0.
From 2/9: CEREBRAL SPINAL FLUID
From 2/8: CSF 49,750 RBCs, 25 WBCs (87 polys, 10 lymphs, 3 monos), protein 113, glucose 62.
Appraisal: Infectious workup started due to concerns of seizures. Maternal labs reassuring. Blood and CSF cultures sent. CBC and CRP reassuring. HSV CSF 1/2 negative, HSV PCR blood negative. Infant started on Ampicillin, Amikacin and Acyclovir. CSF negative and blood culture NGTD.
Plan: Continue to monitor
Follow cultures until final.
Discontinue antibiotics.
Discontinue acyclovir.

CARDIOVASCULAR
Objective: Heart rate for yesterday: average HR 142, range 124-168; for the past

8 hours: average HR 132, range 126-139.
Blood pressure for yesterday: average cuff BP - 53/33(40 mean), range - 52-54/32-34(39-41 mean); for the past 8 hours: average cuff BP - 49/22(33 mean), range - 49/22(33 mean).
Appraisal: Hemodynamically stable.
Plan: Continue to monitor clinically.
Obtain CCHD

NEUROLOGY
Objective: Over the past 24 hours, Phenobarbital level: 2/11 at 4:10 - 36.7 No medications were given.
Appraisal: Seizure workup continues, neurology consulting. Infant has received numerous loads of Phenobarb, Keppra and Fosphenytoin. Continuous EEG in progress. Is currently receiving Phenobarb and Keppra. EEG 2/12 showed subclinical seizures lasting 20-40 seconds, 3-7 times/hour.
Plan: Continue EEG
Load with 10mg/kg Fosphenytoin and follow a free phenytoin level.
Continue phenobarb and add Levetiracetam 26 mg/kg/day
Continue to follow neurology recommendations. MRI on 2/14.
If infant continues to have seizures, Neurology will consider genetic workup.

GASTROINTESTINAL
Objective: From 2/11: Alb 3.3.
Appraisal: Normal abdominal exam and stooling pattern. Tolerating advancing enteral feedings.
Plan: Continue to monitor stooling pattern and quantity.

IMMUNIZATIONS
Appraisal: Hepatitis B #1 given on 2/8 at RH.
Plan: Continue to follow AAP guidelines for vaccine schedule.

GENETICS, ENDOCRINE, METABOLIC
Objective: Metabolic screening tests are pending from 2/9.
Ca 9.7, Phos 6.0 (from 2/11), Alkaline phosphatase 123 (from 2/8).
From 2/9 11:55: AMMONIA - 83.
Specimen moderately hemolyzed.
Hemolyzed Specimen-Results may be affected.
Appraisal: State NB metabolic screen sent at 24 hours of life. Pending results.
Metabolic workup in progress due to seizures.
Workup includes: Ammonia level 83, pyruvic acid (pending), serum AA (pending), UA Organic acid and reducing substances (pending)
Plan: Continue to monitor.
Follow results of labs pending.
Follow results the NBS and repeat per protocol.

SOCIAL
Appraisal: Mom and Dad have been updated at bedside during rounds, questions answered.
Plan: Continue to update on plan of care.

CURRENT MEDICATIONS
Acyclovir, 60 mg IV q8h (19.7 mg/kg/dose, 59 mg/kg/day) started on 2/8/22
Amikacin, 37 mg IV q24h (12.1 mg/kg/day) started on 2/8/22
Ampicillin, 300 mg IV q12h (98.4 mg/kg/dose, 197 mg/kg/day) started on 2/8/22

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

Levetiracetam (Keppra), 40 mg IV q12h (13.1 mg/kg/dose, 26.2 mg/kg/day) started

on 2/11/22
PHENObarbital, 15 mg IV q24h (4.9 mg/kg/day) started on 2/9/22

I personally examined the patient, reviewed and updated the history and assessment, and developed the plan of care with the multidisciplinary team as documented in this note. Allie Kenmore, Nurse Clinician assisted me in the care of the patient and preparation of this note.

Intensive monitoring of cardiorespiratory stability, growth, nutrition, and I and O is needed.

E-signed by Vadim Ivanov, MD; completed 2/12/22 14:18

Neurology Interim Note

Neurology Interim Note
This is a preliminary report.

EEG reviewed from 8:00-14:59.

There were continued frequent seizures until 11:24. The last seizure was at 11:24, following fosphenytoin load at 10:56. After 11:24, there were rare brief potentially ictal rhythmic discharges, but no definite seizures. Overall this is significantly improved from report earlier this morning (see full EEG report dated 2/12/22 for full details).

Results communicated with neurology team.

Electronically Signed by Durica,Sarah MD on 02/12/22 at 1505

Addendum 1: 02/12/22 1727 by Durica,Sarah MD

EEG reviewed from 14:59-17:20.

There were no seizures.

Results communicated with neurology team.

Electronically Signed by Durica,Sarah MD on 02/12/22 at 1728

Addendum 2: 02/12/22 2129 by Durica,Sarah MD

EEG reviewed from 17:20-21:28.

There were no seizures. There were occasional brief potentially ictal rhythmic discharges over the left central and centromidline regions (C3/Cz), but no definite seizures.

The EEG will continue running overnight. The next scheduled update will be tomorrow morning, unless otherwise requested. Please page on call EEG attending for any EEG-related concerns.

Results communicated with the neurology team.

Neurology Progress Note

Subjective
MEDICAL STUDENT NOTE
2-day old male infant born at 40 wks via AROM with mecomnium stained amniotic fluid, transferred from Durant after APGAR of 2-6-7, spells of apnea and leg twitching concerning for possible seizures, hypoxic-ischemic event vs sepsis. Got phenobarbitol 30mg/kg at Durant.

EEG here showed focal seizures on 2/10 (frequently right central focus, rarely left posterior temporo-occipital) for which he got another phenobarbitol 10 mg/kg, then later fosphenytoin 20 mg/kg.

Update 2/12, EEG has had numerous seizures overnight despite therapeutic levels of phenytoin and phenobarbitol and 26 mg/kg/day levoteracetam.

Problem List
1. Seizure

Physical Exam
Heart: RRR

Lungs: Wheezing, likely referred upper airway sounds

Abdomen: Soft, nontender, normal bowel sounds

Extremeties: Warm, well perfused

Neurological Exam: Sleepy, withdraws to noxious stimuli. Pupils equal and reactive, face summetric, tongue midline, responds to touch in face and extremeties. Normal tone, patellar and Babinski reflexes intact, no abnormal spontaneous movements. Opened eyes spontaneously toward end of exam.

Assessment
Newborn with focal seizures of unknown etiology pending metabolic workup. No evidence of HIE.

Patient: BLUE,BB-TATUM Unit#: E003047593
Date: 02/12/22 Acct#: E00677497957

Plan
Fosphenytoin 10 mg/kg load with free phenytoin level check 2 hours after, MRI and genetic testing Monday. Frequent neurochecks, metabolic panel pending.
Remainder of care per primary team.

Rabbani,Bahram X DO 02/12/22 0703:
Neurology Resident Addendum
Neurology Resident Addendum
Patient was personally seen and examined by me today. Please see the following addendum below for further details.

SUB:
3-day-old baby boy born at 40 weeks of gestation via artificial rupture of membranes, delivery significant for meconium stained amniotic fluid, transferred from Durant Medical Center 2/8/22 to OU Children's Center NICU for higher level of workup and care after presenting with low APGARs of 2, 6, and 7 and spells of apnea and leg twitching concerning for possible seizures due to a possible hypoxic ischemic event vs sepsis s/p phenobarbital loads (30 mg/kg in total).

02/09: Patient had 1-2 more seizures overnight. Given Keppra 20 mg/kg load once. No further events since 0700. PHB 29.4, CSF WBC 25, RBC ~50k, elevated neutrophils, glucose 62 (serum ~60-80), protein 113.

02/10: EEG demonstrated focal seizures from C4 and rarely T5/O1. Patient loaded with phenobarbital 10 mg/kg again with PHB level 39.1 today. Patient had another seizure later that night and was given fosphenytoin 20 mg/kg once with resolution of spells the rest of the night (per EEG attending's verbal communication with me). Ammonia 83.

02/11: One seizure at 1932. Loaded with levetiracetam 20 mg/kg once. No further seizures (more brief rhythmic discharges, last one 0106).

02/12: EEG report up till 1700 demonstrated marked improvement from last tracing with prominent left temporal sharp transients and rare brief rhythmic discharges, but no seizures. However, overnight, EEG demonstrated numerous seizures (report still pending, given verbally).

EXAM:
GEN: awake
HEENT: ant fontanelle soft, open, flat
ABD: soft

NEURO:
Lang/Ment: non-verbal, arouses to touch; one apneic event during exam
CN: pupils equally round and reactive to light; oculocephalic reflex present, symm face, responds to touch, tongue midline on protrusion
Motor: normal tone, healthy flexed posture, moving all extremities
Sens: responds appropriately to touch/tickle

Patient: BLUE,BB-TATUM Unit#: E003047593
Date: 02/12/22 Acct#: E00677497957

Coord: no abnormal movements
Reflexes: 2+, plantar extensor response bilaterally, +grasp, +rooting
Gait: deferred

IMPRESSION:
- Apnea episodes concerning for seizure in setting of r/o sepsis vs HIE (low suspicion for HIE?)

Levels:
- Phenobarbital: 29.4 --> 39.1 --> 36.7
- Free phenytoin: 1.41 (02/11)

RECOMMENDATION:
- Please give a fosphenytoin 10 mg/kg load and check a free phenytoin level 2 hours after the load.
- Restarted continuous EEG for further monitoring

- Neurochecks
- Seizure/aspiration precautions
- HUS negative for hemorrhage
- MRI brain W/O can be performed on day 4 of life **(may have to wait till Monday, which is OK)**
- Phenobarbital to 7.5 mg BID (2.5 mg/kg/dose)
- Levetiracetam 40 mg BID (~26 mg/kg/day)
- For more seizures, can give fosphenytoin 10 mg/kg load with free phenytoin level check 2 hours after
- Metabolic panel pending:
    - Pyruvate
    - Serum amino acids - pending
    - Urine organic acids - not received yet
    - Ammonia - 83
- Epilepsy genetic testing -- will be swabbed on Monday 02/14/2022

Discussed with attending physician of record during morning rounds.

CHRUSCIEL,DEEPTI G 02/17/22 1216:

Neurology Attending Note

Attending Note

I have interviewed and examined this patient and personally reviewed all labs and studies. I discussed the patient's management with the residents and reviewed the resident's note. I have discussed care with the patient and family who voiced understanding. I agree with the documented findings and plan of care unless amended below.

Patient seen on 2/12/22.

EXAMS:	CPT:
007127587 RAD CHEST 1 VIEW	71045

Chest single view February 12, 2022

COMPARISON: February 2022

HISTORY: 4-day-old male term infant, increased work of breathing.

IMPRESSION:

Enteric tube extends towards abdomen. Right upper extremity PICC line tip projects over SVC.

There is mild left lung atelectasis. There is no prominent effusion or pneumothorax in this semiupright exam.

Heart and mediastinum appear more prominent probably due to patient positioning, rotated to the left.

Soft tissue and bony structure show no acute process.

Date: 02/13/22

NEONATAL SERVICES DAILY PROGRESS NOTE
3050 gram, 40 + 1/7 week AGA male => 3370 grams; corrected gestational age 40 + 6/7 weeks.
Active Problems: Seizure disorder (identified 2/8/22)
respiratory distress (identified 2/12/22)

PHYSICAL EXAM (at 2/13/22 6:40)
Weight - 3370 grams (+150 grams) - 21%ile ; Z-score = -0.81
Vital Signs: HR - 113, RR - 48, BP - 60/28 (mean 40), O2 Sat - 92%, Temp - 36.7 degrees
General: Term infant under radiant warmer, on CPAP and in no acute distress. Skin pink, warm, and dry.
HEENT: Anterior fontanelle open, soft, and flat with sutures approximated. Head covered with CFM elctrodes and gauze wrap. Eyes clear. Oral mucosa pink and moist, palate intact. Ears in normal shape and position.
Chest: Chest rise symmetrical with upper airway congestion bilaterally. Mild suprasternal retractions.
Heart: Normal sinus rhythm, normal perfusion and pulses, no murmur.
Abdomen: Soft and non-distended, non-tender with active bowel sounds.
Genitals: Normal male genitalia.
Anus: Patent anus.
Skeletal: Spine intact.
Extremities: Moving all extremities equally.
Neuro: Resting, responsive to exam with mild hypotonia

FLUIDS, ELECTROLYTES, NUTRITION
Objective: Weight today 3370 grams, up 150 grams from 2/12. Gained 120.0 grams/day/3 days.
On a radiant warmer.
Input: 413 ml.
136 ml/kg/day (enteral - 41%/parenteral - 59%); 84 cal/kg/day (enteral - 44%/parenteral - 56%).
Output: Urine - 215 ml/day (2.9 ml/kg/hr).
Stools - 1 (Last stool: 9 PM 2/12).
The baby has been on TPN for 5 days from 2/8. A PICC-Right arm has been in place for 4 days from 2/9.
Protein - 3.1 gram/kg/day; Fat - 3.7 gram/kg/day; Carbohydrate - 10.1 gram/kg/day.
FEEDINGS: On SAdv20 (0.68 cals/ml), 15-23 ml; last feed: 23 ml; no residuals. 8 feedings received; 3% nippled. Some gavage feeds given over 20-30 minutes.
From 2/13 3:06: Na 140, K 4.3, Cl 102, Bicarb 22.0, Glucose 62, Ca 9.6, Phos 6.0, BUN 13.0, Creat 0.5, Mg 1.9, Triglycerides 206.
From 2/12 17:53: Glucose bld-75, Ca (ionized) 1.31, Lactate 1.4.

Appraisal: Infant tolerating advancing enteral feeds of Sim Term with supplemental with HAL/SMOF @ 130 ml/kg/day. Electrolytes as listed. Voiding and stooling. Weight gain noted overnight. Speech consulted, holding PO feeds due to concern for aspiration and respiratory status.
Plan: Advance enteral feeds to 80 ml/kg/d of Similac term, supplement with TPN/SMOF for a TFG of 140 ml/kg/day.
Will continue to assess nutritional intake, output, and growth trend.
Continue to follow speech pathology recommendations.

RESPIRATORY
Objective: Respiratory rate for yesterday: average 35, range 22-47; for the past 8 hours: average 33, range 22-48.
O2 sats for yesterday: average 96, range 91-99; for the past 8 hours: average 95, range 92-98.
2/13 9:30: Non-inv CPAP-23% O2, PEEP/CPAP - 7.0.
From 2/12 17:53: Capillary blood gases: pH 7.41, pCO2 44, pO2 41, base excess 2.4.
No A and B events since 2/10.
Appraisal: Infant was placed on CPAP on 2/12 for increased work of breathing/stridor with bottle feeding and crackles. Infant was previously stable in room air.
Plan: Continue to monitor.
CXR/CBG in PRN.

HEMATOLOGY
Objective: Blood out so far - 9.0 ml (never transfused).
From 2/12 17:53: Hgb 14.5, Hct 43.0.
From 2/10: Platelets 239,000.
Appraisal: Heme Labs stable.
Plan: Continue to monitor.
Limit lab draws as able.

BILIRUBIN
Objective: Serum bili 1.0 on 2/13 3:06.
Mother's blood type B Positive.
The infant has not been treated with phototherapy.
The maximum total bilirubin was 5.2 on 2/10 and the maximum direct bilirubin was 0.3 on 2/9.
Appraisal: Mom's blood type is B+. T bili remains well below threshold of treatment.
Plan: Continue to monitor clinically.

INFECTIOUS DISEASE
Objective: Temperature range over the past day: 36.6-37.3 degrees; temperature over the past 8 hours: 36.7-36.9 degrees.
From 2/10: CRP - <3.0.
From 2/9: CEREBRAL SPINAL FLUID
From 2/8: CSF 49,750 RBCs, 25 WBCs (87 polys, 10 lymphs, 3 monos), protein 113, glucose 62.
Appraisal: Infectious workup started due to concerns of seizures. Maternal labs reassuring. Blood and CSF cultures sent. CBC and CRP reassuring. HSV CSF 1/2 negative, HSV PCR blood negative. Infant started on Ampicillin, Amikacin and Acyclovir dc'd on 2/13. CSF negative and blood culture NGTD.
Plan: Continue to monitor

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

Follow cultures until final.

CARDIOVASCULAR
Objective: Heart rate for yesterday: average HR 130, range 118-157; for the past 8 hours: average HR 122, range 113-133.
Blood pressure for yesterday: average cuff BP - 53/28(38 mean), range - 49-56/22-34(33-43 mean); for the past 8 hours: average cuff BP - 60/28(40 mean), range - 60/28(40 mean).
The infant passed the critical congenital heart disease screening at 108.8 hours of age.
Appraisal: Hemodynamically stable.
Plan: Continue to monitor clinically.
Obtain CCHD

NEUROLOGY
Objective: Over the past 24 hours, Phenobarbital level: 2/11 - 36.7 No medications were given.
Appraisal: Seizure workup continues, neurology consulting. Infant has received numerous loads of Phenobarb, Keppra and Fosphenytoin. Continuous EEG in progress. Is currently receiving Phenobarb and Keppra. EEG 2/12 showed subclinical seizures lasting 20-40 seconds, 3-7 times/hour. Loaded with 10mg/kg Fosphenytoin on 2/13 and free phenytoin level (2.1)
Plan: Continue EEG
Continue phenobarb and Levetiracetam
Continue to follow neurology recommendations. Obtain MRI 2/14 per neuro's recs.
Obtain random phenobarb level
Neurology requested genetic workup on 2/14.

GASTROINTESTINAL
Objective: From 2/13: T Prot 4.8, Alb 3.1, AST(SGOT) 39, ALT(SGPT) 23.
Appraisal: Normal abdominal exam and stooling pattern. Tolerating advancing enteral feedings.
Plan: Continue to monitor stooling pattern and quantity.

IMMUNIZATIONS
Appraisal: Hepatitis B #1 given on 2/8 at RH.
Plan: Continue to follow AAP guidelines for vaccine schedule.

GENETICS, ENDOCRINE, METABOLIC
Objective: Metabolic screening tests are pending from 2/9.
Ca 9.6, Phos 6.0, Alkaline phosphatase 111 (from 2/13).
From 2/9 11:55: AMMONIA - 83.
Specimen moderately hemolyzed.
Hemolyzed Specimen-Results may be affected.
Appraisal: State NB metabolic screen sent at 24 hours of life. Pending results.
Metabolic workup in progress due to seizures.
Workup includes: Ammonia level 83, pyruvic acid (pending), serum AA (pending), UA Organic acid and reducing substances (pending)
Plan: Continue to monitor.
Follow results of labs pending.
Follow results the NBS and repeat per protocol.

IN-PATIENT DEVELOPMENTAL INTERVENTIONS
Appraisal: Infant at risk of developmental delays due hospitalization and

seizures.

Plan: Continue to follow developmental needs while in the unit.
NICU PT/OT ordered.

CURRENT MEDICATIONS
Levetiracetam (Keppra), 40 mg IV q12h (13.1 mg/kg/dose, 26.2 mg/kg/day) started on 2/11/22
PHENObarbital, 15 mg IV q24h (4.9 mg/kg/day) started on 2/9/22

I personally examined the patient, reviewed and updated the history and assessment, and developed the plan of care with the multidisciplinary team as documented in this note. Allie Kenmore, Nurse Clinician assisted me in the care of the patient and preparation of this note.

The patient needs critical care.

Neurology Interim Note

Neurology Interim Note
this is a preliminary report. Full report to follow.

EEG reviewed from 21:28 on 2/12/22-09:13 on 2/13/22.

There were no seizures. There was one pushbutton event at 23:49 for nonspecific movements and alarm sounding, but no clear epileptiform EEG changes.

Results communicated with neurology team.

Electronically Signed by Durica,Sarah MD on 02/13/22 at 0914

Addendum 1: 02/13/22 1311 by Durica,Sarah MD

EEG reviewed from 09:13-13:02.

There were no seizures.

Electronically Signed by Durica,Sarah MD on 02/13/22 at 1311

Addendum 2: 02/13/22 2032 by Durica,Sarah MD

EEG reviewed from 13:02-20:30.

There were no seizures. There was one pusbutton event at 18:19 for uncertain reason other than the alarm sounding. There was no associated epileptiform activity.

Results communicated with neurology team.

The EEG will continue recording overnight. The next update will be tomorrow morning, unless otherwise requested.

Electronically Signed by Durica,Sarah MD on 02/13/22 at 2033

Medical Student Note

Parker is a 5-day-old baby boy born at 40 weeks of gestation via artificial rupture of membranes, delivery for significant prolonged labor and meconium stained amniotic fluid, transferred from Durant Medical Center 2/8/22 to OU Children's Center NICU for higher level of workup and care after presenting with concern for seizure manifested by spells of apnea and leg twitching due to a possible hypoxic ischemic event vs sepsis s/p phenobarbital loads (30 mg/kg in total).

Physical Exam

Language/Mental Status non-verbal, arouses to touch and tickle
CN: pupils equally round and reactive to light; oculocephalic reflex present, symmetrical face, responds to touch, tongue midline on protrusion
Motor: normal tone, healthy flexed posture, moving all extremities
Sensory: responds appropriately to touch/tickle
Coordination: no abnormal movements
Reflexes: 2+, plantar extensor response bilaterally, +grasp, +rooting
Gait: deferred

Assessment
****Medical Student Note****

Impression: Parker is a 5-day-old baby boy born at 40 weeks of gestation via artificial rupture of membranes, delivery for significant prolonged labor and meconium stained amniotic fluid, transferred from Durant Medical Center 2/8/22 to OU Children's Center NICU for higher level of workup and care after presenting with concern for seizure manifested by spells of apnea and leg twitching due to a possible hypoxic ischemic event vs sepsis s/p phenobarbital loads (30 mg/kg in total).

Plan
- Conitue EEG for further monitoring
- Neurochecks
- Seizure/aspiration precautions
- MRI brain W/O can be performed on or after day 4 of life (Planning on Monday)
- Phenobarbital 7.5 mg BID (2.5 mg/kg/dose)
- Levetiracetam 40 mg BID (~26 mg/kg/day)

Patient: BLUE,BB-TATUM Unit#: E003047593
Date: 02/13/22 Acct#: E00677497957

- For more seizures, can give fosphenytoin 10 mg/kg load with free phenytoin level check 2 hours after
- Metabolic panel pending:
  - Serum amino acids - pending
  - Ammonia - 83
- Epilepsy genetic testing -- will be swabbed on Monday 02/14/2022

SUB:
5-day-old baby boy born at 40 weeks of gestation via artificial rupture of membranes, delivery significant for meconium stained amniotic fluid, transferred from Durant Medical Center 2/8/22 to OU Children's Center NICU for higher level of workup and care after presenting with low APGARs of 2, 6, and 7 and spells of apnea and leg twitching concerning for possible seizures due to a possible hypoxic ischemic event vs sepsis s/p phenobarbital loads (30 mg/kg in total).

02/09: Patient had 1-2 more seizures overnight. Given Keppra 20 mg/kg load once. No further events since 0700. PHB 29.4, CSF WBC 25, RBC ~50k, elevated neutrophils, glucose 62 (serum ~60-80), protein 113.

02/10: EEG demonstrated focal seizures from C4 and rarely T5/O1. Patient loaded with phenobarbital 10 mg/kg again with PHB level 39.1 today. Patient had another seizure later that night and was given fosphenytoin 20 mg/kg once with resolution of spells the rest of the night (per EEG attending's verbal communication with me). Ammonia 83.

02/11: One seizure at 1932. Loaded with levetiracetam 20 mg/kg once. No further seizures (more brief rhythmic discharges, last one 0106).

02/12: EEG report up till 1700 demonstrated marked improvement from last tracing with prominent left temporal sharp transients and rare brief rhythmic discharges, but no seizures. However, overnight, EEG demonstrated numerous seizures (report still pending, given verbally).

02/13: Seizures until 1124 yesterday (following fosphenytoin load @ 1056). Afterward, rare BRDs over left central and centromidline regions (C3/Cz) but no definite seizures. Remained seizure-free for the rest of 02/12 until 2128 (end of EEG attending's review, next review this morning still pending).

EXAM:
GEN: awake
HEENT: ant fontanelle soft, open, flat

Patient: BLUE,BB-TATUM Unit#: E003047593
Date: 02/13/22 Acct#: E00677497957

ABD: soft

NEURO:
Lang/Ment: non-verbal, arouses to touch; one apneic event during exam
CN: pupils equally round and reactive to light; oculocephalic reflex present, symm face, responds to touch, tongue midline on protrusion
Motor: normal tone, healthy flexed posture, moving all extremities
Sens: responds appropriately to touch/tickle
Coord: no abnormal movements
Reflexes: 2+, plantar extensor response bilaterally, +grasp, +rooting
Gait: deferred

IMPRESSION:
- Apnea episodes concerning for seizure in setting of r/o sepsis vs HIE (low suspicion for HIE?)

Levels:
- Phenobarbital: 29.4 --> 39.1 --> 36.7
- Free phenytoin: 1.41 --> 2.12

RECOMMENDATION:
- Restarted continuous EEG for further monitoring
- Neurochecks
- Seizure/aspiration precautions
- HUS negative for hemorrhage
- MRI brain W/O can be performed on or after day 4 of life **(may have to wait till Monday, which is OK)**
- Phenobarbital 7.5 mg BID (2.5 mg/kg/dose) - **please check a phenobarbital level today**
- Levetiracetam 40 mg BID (~26 mg/kg/day)
- For more seizures, can give fosphenytoin 10 mg/kg load with free phenytoin level check 2 hours after
- Metabolic panel pending:
    - Serum amino acids - pending
    - Ammonia - 83
- Epilepsy genetic testing -- will be swabbed on Monday 02/14/2022

Discussed with attending physician of record during morning rounds.

CHRUSCIEL,DEEPTI G 02/17/22 1216:

Attending Doctor: Bergner,Erynn MD
Date: 02/14/22

NEONATAL SERVICES DAILY PROGRESS NOTE
3050 gram, 40 + 1/7 week AGA male => 3410 grams; corrected gestational age 41 + 0/7 weeks.
Active Problems: Seizure disorder (identified 2/8/22)
respiratory distress (identified 2/12/22)

PHYSICAL EXAM (at 2/14/22 6:47)
Weight - 3410 grams (+40 grams) - 21%ile ; Z-score = -0.79
Vital Signs: HR - 115, RR - 26, BP - 54/33 (mean 40), O2 Sat - 97%, Temp - 36.9 degrees
General: Term infant under radiant warmer, on CPAP and in no acute distress. Skin pink, warm, and dry.
HEENT: Anterior fontanelle open, soft, and flat with sutures approximated. Head covered with CFM elctrodes and gauze wrap. Eyes clear. Oral mucosa pink and moist, palate intact. Ears in normal shape and position.
Chest: Chest rise symmetrical with upper airway congestion bilaterally. Mild suprasternal retractions.
Heart: Normal sinus rhythm, normal perfusion and pulses, no murmur.
Abdomen: Soft and non-distended, non-tender with active bowel sounds.
Genitals: Normal male genitalia.
Anus: Patent anus.
Skeletal: Spine intact.
Extremities: Moving all extremities equally.
Neuro: Asleep, responsive to exam. Hypotonic.

FLUIDS, ELECTROLYTES, NUTRITION
Objective: Weight today 3410 grams, up 40 grams from 2/13. Gained 106.7 grams/day/3 days.
On a radiant warmer with a set temperature of 36.0 degrees.
Input: 441 ml.
145 ml/kg/day (enteral - 58%/parenteral - 42%); 91 cal/kg/day (enteral - 61%/parenteral - 39%).
Output: Urine - 316 ml/day (4.3 ml/kg/hr).
Stools - 2 (Last stool: 9 AM 2/14).
The baby has been on TPN for 6 days from 2/8. A PICC-Right arm has been in place for 5 days from 2/9.
Protein - 3.7 gram/kg/day; Fat - 3.5 gram/kg/day; Carbohydrate - 11.7 gram/kg/day.
FEEDINGS: On SAdv20 (0.68 cals/ml) and HM-T (0.64 cals/ml), 23-33 ml; last feed: 42 ml of SAdv20; one 3 ml residual - refed. 8 feedings received; none nippled. Gavage feeds given over 30-40 minutes.
From 2/13 3:06: Na 140, K 4.3, Cl 102, Bicarb 22.0, Glucose 62, Ca 9.6, Phos 6.0, BUN 13.0, Creat 0.5, Mg 1.9, Triglycerides 206.

From 2/12 17:53: Glucose bld-75, Ca (ionized) 1.31, Lactate 1.4.
Appraisal: Infant tolerating advancing enteral feeds of Sim Term with supplemental with HAL/SMOF @ 140 ml/kg/day. Electrolytes as listed. Voiding and stooling. Weight gain noted overnight. Speech consulted, holding PO feeds due to concern for aspiration and respiratory status.
Plan: Advance enteral feeds to 100 ml/kg/d and supplement with D10W for a TFG of 140 ml/kg/day via PICC.
Will continue to assess nutritional intake, output, and growth trend.
Continue to follow speech pathology recommendations.

RESPIRATORY
Objective: Respiratory rate for yesterday: average 41, range 22-65; for the past 8 hours: average 37, range 26-49.
O2 sats for yesterday: average 96, range 92-98; for the past 8 hours: average 97, range 95-99.
2/14 10:15: NC-21% O2 @ 3.00 L/min.
From 2/12 17:53: Capillary blood gases: pH 7.41, pCO2 44, pO2 41, base excess 2.4.
A and B events yesterday - 2 (2 mild; 1 associated with feeding). No A and B events today.
Appraisal: Infant was placed on CPAP on 2/12 for increased work of breathing/stridor with bottle feeding and crackles. Infant was previously stable in room air.
Plan: Wean to HFNC and wean as tolerated.
Continue to monitor.
CXR/CBG in PRN.

HEMATOLOGY
Objective: Blood out so far - 9.6 ml (never transfused).
From 2/12 17:53: Hgb 14.5, Hct 43.0.
From 2/10: Platelets 239,000.
Appraisal: Heme Labs stable.
Plan: Continue to monitor.
Limit lab draws as able.

BILIRUBIN
Objective: Serum bili 1.0 on 2/13 3:06.
Mother's blood type B Positive.
The infant has not been treated with phototherapy.
The maximum total bilirubin was 5.2 on 2/10 and the maximum direct bilirubin was 0.3 on 2/9.
Appraisal: Mom's blood type is B+. T bili remains well below threshold of treatment.
Plan: Continue to monitor clinically.

INFECTIOUS DISEASE
Objective: Temperature range over the past day: 36.7-37.2 degrees; temperature over the past 8 hours: 36.9-37.0 degrees.
From 2/10: CRP - <3.0.
From 2/9: CEREBRAL SPINAL FLUID
From 2/8: CSF 49,750 RBCs, 25 WBCs (87 polys, 10 lymphs, 3 monos), protein 113, glucose 62.
Appraisal: Infectious workup started due to concerns of seizures. Maternal labs reassuring. Blood and CSF cultures sent. CBC and CRP reassuring. HSV CSF 1/2

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

negative, HSV PCR blood negative. Infant started on Ampicillin, Amikacin and Acyclovir dc'd on 2/13. CSF negative and blood culture negative.
Plan: Continue to monitor

CARDIOVASCULAR
Objective: Heart rate for yesterday: average HR 120, range 108-137; for the past 8 hours: average HR 115, range 105-124.
Blood pressure for yesterday: average cuff BP - 60/28(40 mean), range - 60/28(40 mean); for the past 8 hours: average cuff BP - 54/33(40 mean), range - 54/33(40 mean).
The infant passed the critical congenital heart disease screening at 108.8 hours of age.
Appraisal: Hemodynamically stable.
Plan: Continue to monitor clinically.

NEUROLOGY
Objective: Over the past 24 hours, Phenobarbital level: 2/13 at 15:30 - 39.9 No medications were given.
Appraisal: Seizure workup continues, neurology consulting. Infant has received numerous loads of Phenobarb, Keppra and Fosphenytoin. Continuous EEG in progress. Is currently receiving Phenobarb and Keppra. EEG 2/12 showed subclinical seizures lasting 20-40 seconds, 3-7 times/hour. Loaded with 10mg/kg Fosphenytoin on 2/13 and free phenytoin level (2.1) Phenobarb level 2/13 39.9 WNL
Plan: Continue EEG per neurology.
Continue phenobarb and Levetiracetam, change to PO route
Continue to follow neurology recommendations. Obtain MRI 2/14 per neuro's recs.
Neurology requested epilepsy genetic workup on 2/14.

GASTROINTESTINAL
Objective: From 2/13: T Prot 4.8, Alb 3.1, AST(SGOT) 39, ALT(SGPT) 23.
Appraisal: Normal abdominal exam and stooling pattern. Tolerating advancing enteral feedings.
Plan: Continue to monitor stooling pattern and quantity.

GENITOURINARY
Objective: Urine output: 79 ml (3.2 ml/kg/hr) over the past 8 hours and 4.3 ml/kg/hr over the past 24 hours. On 2/13 3:06, BUN 13.0 and creatinine 0.4.
Appraisal: Normal renal function for age.
Plan: Continue to monitor clinically. Monitor UOP.

IMMUNIZATIONS
Appraisal: Hepatitis B #1 given on 2/8 at RH.
Plan: Continue to follow AAP guidelines for vaccine schedule.

GENETICS, ENDOCRINE, METABOLIC
Objective: Metabolic screening tests are pending from 2/9.
Ca 9.6, Phos 6.0, Alkaline phosphatase 111 (from 2/13).
From 2/9 11:55: AMMONIA - 83.
Specimen moderately hemolyzed.
Hemolyzed Specimen-Results may be affected.
Appraisal: State NB metabolic screen sent at 24 hours of life. Pending results.
Metabolic workup in progress due to seizures.
Workup includes: Ammonia level 83, pyruvic acid (pending), serum AA elevated

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

levels but not consistent with inherited metabolic disease, UA Organic acid and

reducing substances (pending)
Plan: Continue to monitor.
Follow results of labs pending.
Follow results the NBS and repeat per protocol.

SOCIAL
Appraisal: Mom and Dad have been updated at bedside during rounds, questions answered.
Plan: Continue to update on plan of care.

IN-PATIENT DEVELOPMENTAL INTERVENTIONS
Appraisal: Infant at risk of developmental delays due hospitalization and seizures.
Plan: Continue to follow developmental needs while in the unit.
NICU PT/OT ordered.

CURRENT MEDICATIONS
Levetiracetam (Keppra), 40 mg enterally q12h (13.1 mg/kg/dose, 26.2 mg/kg/day) started on 2/14/22
PHENObarbital, 15 mg enterally q24h (4.9 mg/kg/day) started on 2/14/22

I personally examined the patient, reviewed and updated the history and assessment, and developed the plan of care with the multidisciplinary team as documented in this note. Allie Kenmore, Nurse Clinician assisted me in the care of the patient and preparation of this note.

The patient requires critical care.

REPORT AUTHOR: Rabbani,Bahram DO

Rabbani,Bahram X DO 02/14/22 0628:
Neurology Progress Note

Subjective
5-day-old baby boy born at 40 weeks of gestation via artificial rupture of membranes, delivery significant for meconium stained amniotic fluid, transferred from Durant Medical Center 2/8/22 to OU Children's Center NICU for higher level of workup and care after presenting with low APGARs of 2, 6, and 7 and spells of apnea and leg twitching concerning for possible seizures due to a possible hypoxic ischemic event vs sepsis s/p phenobarbital loads (30 mg/kg in total).

UPDATES:
02/12: EEG report up till 1700 demonstrated marked improvement from last tracing with prominent left temporal sharp transients and rare brief rhythmic discharges, but no seizures. However, overnight, EEG demonstrated numerous seizures.

02/13: Seizures until 1124 on 02/12 (following fosphenytoin load @ 1056). Afterward, rare BRDs over left central and centromidline regions (C3/Cz) but no definite seizures. Remained seizure-free for the rest of 02/12 until 2128 (end of EEG attending's review, next review this morning still pending).

02/14: No seizures overnight (one push-button event at 1819 with no electrographic evidence of seizures) or in the last 24 hours. Will obtain epilepsy gene panel swab today or tomorrow. Possibly going for MRI brain today.

Physical Exam
GEN: awake
HEENT: ant fontanelle soft, open, flat
ABD: soft

NEURO:
Lang/Ment: non-verbal, arouses to touch; one apneic event during exam
CN: pupils equally round and reactive to light; oculocephalic reflex present, symm face, responds to touch, tongue midline on protrusion
Motor: normal tone, healthy flexed posture, moving all extremities
Sens: responds appropriately to touch/tickle
Coord: no abnormal movements
Reflexes: 2+, plantar extensor response bilaterally, +grasp, +rooting
Gait: deferred

Assessment

Patient: BLUE,BB-TATUM Unit#: E003047593
Date: 02/14/22 Acct#: E00677497957

- Apnea episodes concerning for seizure in setting of r/o sepsis vs HIE (low suspicion for HIE?)

Levels:
- Phenobarbital: 29.4 --> 39.1 --> 36.7 --> 39.9
- Free phenytoin: 1.41 --> 2.12

RECOMMENDATION:
- Restarted continuous EEG for further monitoring
- Neurochecks
- Seizure/aspiration precautions
- HUS negative for hemorrhage
- MRI brain W/O can be performed on or after day 4 of life **(may have to wait till Monday, which is OK)**
- Phenobarbital 7.5 mg BID (2.5 mg/kg/dose)
- Levetiracetam 40 mg BID (~26 mg/kg/day)
- For more seizures, can give fosphenytoin 10 mg/kg load with free phenytoin level check 2 hours after
- Metabolic panel pending:
    - Serum amino acids - pending
    - Ammonia - 83
- Epilepsy genetic testing -- will be swabbed on Monday 02/14/2022
- **D/c EEG**

Discussed with attending physician of record during morning rounds.

PURCARIN,GABRIELA 03/16/22 0727:

Neurology Attending Note

Attending Note

I have examined this patient on 2/14/22 and personally reviewed all labs and studies. I discussed the patient's management with the residents and reviewed the resident's note. I have discussed care with the family who voiced understanding. I agree with the documented findings and plan of care unless amended below.

24hr EEG didn't show any seizures. There were bilateral epileptiform discharges, but no seizures. The 3 push-button events were not seizures.

NEONATAL SERVICES DAILY PROGRESS NOTE
3050 gram, 40 + 1/7 week AGA male => 3470 grams; corrected gestational age 41 + 1/7 weeks.
Active Problems: Seizure disorder (identified 2/8/22)
respiratory distress (identified 2/12/22)

PHYSICAL EXAM (at 2/15/22 8:15)
Weight - 3470 grams (+60 grams) - 23%ile ; Z-score = -0.73
Length - 53.0 cm - 64%ile ; Z-score = 0.37
Head circumference - 36.0 cm - 61%ile ; Z-score = 0.27
Vital Signs: HR - 134, RR - 74, BP - 51/25 (mean 32), O2 Sat - 97%, Temp - 37.0 degrees
General: Term infant under radiant warmer, on LFNC and in no acute distress.
Skin pale, pink, warm, and dry.
HEENT: Anterior fontanelle open, soft, and flat with sutures approximated. Eyes clear. Ears in normal shape and position. Oral mucosa pink and moist, palate intact.
Chest: Chest rise symmetrical with clear breath sounds bilaterally.
Heart: Normal sinus rhythm, normal perfusion and pulses, no murmur.
Abdomen: Soft and non-distended, non-tender with active bowel sounds.
Extremities: Moving all extremities equally.
Neuro: Active, responsive, normal tone for gestational age.

FLUIDS, ELECTROLYTES, NUTRITION
Objective: Weight today 3470 grams, up 60 grams from 2/14. Gained 83.3 grams/day/3 days.
On a radiant warmer with a set temperature of 36.5 degrees.
Input: 482 ml.
158 ml/kg/day (enteral - 70%/parenteral - 30%); 95 cal/kg/day (enteral - 78%/parenteral - 22%).
Output: Urine - 336 ml/day (4.6 ml/kg/hr).
Stools - 4 (Last stool: 9 AM 2/15).
The baby was on TPN for 7 days from 2/8 to 2/14. A PICC-Right arm has been in place for 6 days from 2/9.
Protein - 2.7 gram/kg/day; Fat - 3.9 gram/kg/day; Carbohydrate - 12.8 gram/kg/day.
FEEDINGS: On SAdv20 (0.68 cals/ml) and HM-PT (0.66 cals/ml), 42 ml; last feed: 52 ml of SAdv20; no residuals. 8 feedings received; none nippled. Gavage feeds given over 35-40 minutes.
From 2/13: Na 140, K 4.3, Cl 102, Bicarb 22.0, Glucose 62, Ca 9.6, Phos 6.0, BUN 13.0, Creat 0.5, Mg 1.9, Triglycerides 206.
From 2/12: Glucose bld-75, Ca (ionized) 1.31, Lactate 1.4.
Appraisal: Infant tolerating advancing enteral feeds of Sim Term with

supplemental with clears @ 140 ml/kg/day. Electrolytes as listed. Voiding and stooling. Weight gain noted overnight. Speech consulted, holding PO feeds due to concern for aspiration and respiratory status.
Plan: Advance enteral feeds to 120 ml/kg/d and supplement with D10W for a TFG of 150 ml/kg/day via PICC.
Will continue to assess nutritional intake, output, and growth trend.
Continue to follow speech pathology recommendations.

RESPIRATORY
Objective: Respiratory rate for yesterday: average 34, range 26-49; for the past 8 hours: average 46, range 29-74.
O2 sats for yesterday: average 97, range 94-100; for the past 8 hours: average 96, range 92-100.
2/15 9:32: NC-21% O2 @ 1.00 L/min.
From 2/12 17:53: Capillary blood gases: pH 7.41, pCO2 44, pO2 41, base excess 2.4.
No A and B events since 2/14.
Appraisal: Infant was placed on CPAP on 2/12 for increased work of breathing/stridor with bottle feeding and crackles; transitioned to LFNC 2/14.
Plan: Continue LFNC and wean as tolerated.
Continue to monitor.
CXR/CBG in PRN.

HEMATOLOGY
Objective: Blood out so far - 9.6 ml (never transfused).
From 2/12: Hgb 14.5, Hct 43.0.
From 2/10: Platelets 239,000.
Appraisal: Heme Labs stable.
Plan: Continue to monitor.
Limit lab draws as able.

INFECTIOUS DISEASE
Objective: Temperature range over the past day: 36.4-37.0 degrees; temperature over the past 8 hours: 36.7-37.0 degrees.
From 2/10: CRP - <3.0.
From 2/9: CEREBRAL SPINAL FLUID.
Appraisal: NO current concern for infection.
Plan: Continue to monitor

CARDIOVASCULAR
Objective: Heart rate for yesterday: average HR 116, range 102-138; for the past 8 hours: average HR 128, range 108-144.
Blood pressure for yesterday: average cuff BP - 57/33(42 mean), range - 54-60/33(40-43 mean); for the past 8 hours: average cuff BP - 55/25(35 mean), range - 51-58/24-26(32-37 mean).
The infant passed the critical congenital heart disease screening at 108.8 hours of age.
Appraisal: Hemodynamically stable.
Plan: Continue to monitor clinically.

NEUROLOGY
Objective: Over the past 24 hours, Phenobarbital level: 2/13 at 15:30 - 39.9 No medications were given.
Appraisal: Seizure workup continues, neurology consulting. Infant has received

numerous loads of Phenobarb, Keppra and Fosphenytoin. Continuous EEG in progress. Is currently receiving Phenobarb and Keppra. EEG 2/12 showed subclinical seizures lasting 20-40 seconds, 3-7 times/hour. Loaded with 10mg/kg Fosphenytoin on 2/13 and free phenytoin level (2.1) Phenobarb level 2/13 39.9 WNL. Epilepsy genetic workup pending.
Plan: Continue EEG per neurology.
Continue phenobarb and Levetiracetam
Continue to follow neurology recommendations. Obtain MRI 2/15 per neuro's recs.

IMMUNIZATIONS
Appraisal: Hepatitis B #1 given on 2/8 at RH.
Plan: Continue to follow AAP guidelines for vaccine schedule.

GENETICS, ENDOCRINE, METABOLIC
Objective: Metabolic screening tests are pending from 2/9.
Ca 9.6, Phos 6.0, Alkaline phosphatase 111 (from 2/13).
From 2/9 11:55: AMMONIA - 83.
Specimen moderately hemolyzed.
Hemolyzed Specimen-Results may be affected.
Appraisal: State NB metabolic screen sent at 24 hours of life, consistent with TPN.
Metabolic workup in progress due to seizures.
Workup includes: Ammonia level 83, pyruvic acid (0.4 normal), serum AA elevated levels but not consistent with inherited metabolic disease, UA Organic acid and reducing substances (pending)
Plan: Continue to monitor.
Follow results of labs pending.
Repeat NBS at 14 days of life.

SOCIAL
Appraisal: Mom and Dad have been updated at bedside during rounds, questions answered.
Plan: Continue to update on plan of care.

IN-PATIENT DEVELOPMENTAL INTERVENTIONS
Appraisal: Infant at risk of developmental delays due hospitalization and seizures.
Plan: Continue to follow developmental needs while in the unit.
NICU PT/OT ordered.

CURRENT MEDICATIONS
Levetiracetam (Keppra), 40 mg enterally q12h (13.1 mg/kg/dose, 26.2 mg/kg/day) started on 2/14/22
PHENObarbital, 15 mg enterally q24h (4.9 mg/kg/day) started on 2/14/22

I personally examined the patient, reviewed and updated the history and assessment, and developed the plan of care with the multidisciplinary team as documented in this note. Jumoke A. Ogunfolu, NNP Student assisted me in the care of the patient and preparation of this note.

The patient needs intensive monitoring of nutrition, I and O, growth, and cardiorespiratory stability.

Rabbani,Bahram X DO 02/15/22 0628:

Neurology Progress Note

Subjective

5-day-old baby boy born at 40 weeks of gestation via artificial rupture of membranes, delivery significant for meconium stained amniotic fluid, transferred from Durant Medical Center 2/8/22 to OU Children's Center NICU for higher level of workup and care after presenting with low APGARs of 2, 6, and 7 and spells of apnea and leg twitching concerning for possible seizures due to a possible hypoxic ischemic event vs sepsis s/p phenobarbital loads (30 mg/kg in total).

UPDATES:
02/12: EEG report up till 1700 demonstrated marked improvement from last tracing with prominent left temporal sharp transients and rare brief rhythmic discharges, but no seizures. However, overnight, EEG demonstrated numerous seizures.

02/13: Seizures until 1124 on 02/12 (following fosphenytoin load @ 1056). Afterward, rare BRDs over left central and centromidline regions (C3/Cz) but no definite seizures. Remained seizure-free for the rest of 02/12 until 2128 (end of EEG attending's review, next review this morning still pending).

02/14: No seizures overnight (one push-button event at 1819 with no electrographic evidence of seizures) or in the last 24 hours. Will obtain epilepsy gene panel swab today or tomorrow. Possibly going for MRI brain today.

02/15: Serum AA profile not overly consistent with an inherited metabolic disorder, but several species elevated. No MRI was obtained yesterday.

Physical Exam

GEN: awake
HEENT: ant fontanelle soft, open, flat
ABD: soft

NEURO:
Lang/Ment: non-verbal, arouses to touch; one apneic event during exam
CN: pupils equally round and reactive to light; oculocephalic reflex present, symm face, responds to touch, tongue midline on protrusion
Motor: normal tone, healthy flexed posture, moving all extremities
Sens: responds appropriately to touch/tickle
Coord: no abnormal movements
Reflexes: 2+, plantar extensor response bilaterally, +grasp, +rooting

Patient: BLUE,BB-TATUM Unit#: E003047593
Date: 02/15/22 Acct#: E00677497957

Gait: deferred

Assessment
- Apnea episodes concerning for seizure
  - Seizures resolved on 02/12/2022 @ 1124

Levels:
- Phenobarbital: 29.4 --> 39.1 --> 36.7 --> 39.9
- Free phenytoin: 1.41 --> 2.12

RECOMMENDATION:
- Restarted continuous EEG for further monitoring
- Neurochecks
- Seizure/aspiration precautions
- HUS negative for hemorrhage
- **MRI brain W/O can be performed on or after day 4 of life when able**
- **Phenobarbital level tomorrow (02/16)**
- Phenobarbital 7.5 mg BID (2.5 mg/kg/dose)
- Levetiracetam 40 mg BID (~26 mg/kg/day)
- For more seizures, can give fosphenytoin 10 mg/kg load with free phenytoin level check 2 hours after
- Metabolic panel pending:
  - Serum amino acids - not
  - Ammonia - 83
- Epilepsy genetic testing -- will be swabbed on Monday 02/14/2022

Discussed with attending physician of record during morning rounds.

PURCARIN,GABRIELA 03/16/22 0733:

Neurology Attending Note

Attending Note

I have examined this patient on 2/15/22 and personally reviewed all labs and studies. I discussed the patient's management with the residents and reviewed the resident's note. I have discussed care with the mother who voiced understanding. I agree with the documented findings and plan of care unless amended below: He has been off EEG monitoring since 2/14 because no seizures were recorded and the recorded events were non-epileptic).
Seizure medication doses: phenobarbital 7.2mg (1.8ml) BID and Keppra 40mg BID
MRI showed DWI changes in R>L white matter in the periventricular areas and corpus callosum, suggestive of HIE and a right cerebellar intraparenchymal hemorrhage. Rec. a f/up head CT to make sure the hemorrhage is not expanded. Clinically, he is reactive, AFSOF, moves all extremities to light stimulation.

MRI brain without contrast dated 2/14/2022 .

Comparison: Ultrasound study on 2/9/2022.

History: Seizures

Technique: Multiplanar imaging of the brain was performed without contrast.

Findings:
Restricted diffusion involving multiple areas of right greater than left cortical/subcortical supratentorial region as well as the periventricular region, external and internal capsule along with the corpus callosum. Associated more diffuse intrinsic T1 signal involving the bilateral cerebral cortices. Findings likely related to HIE.

Intrinsic T1 signal, low T2 signal and susceptibility artifact with fluid-fluid level in the region of the right cerebellar hemisphere which may represent parenchymal hemorrhage. Mild scattered susceptibility artifact with intrinsic T1 signal likely representing blood products along the cerebellar tentorium and dorsal aspect of the posterior fossa as well as along the convexities of the right middle cranial fossa as well as the dorsomedial left occipital lobe, some likely representing birth-related sequela. Scattered supratentorial punctate susceptibility artifacts, also representing blood products, in the bilateral cerebral hemispheres.

Otherwise normal myelination. No midline shift. No hydrocephalus. The basal cisterns are patent. The cerebellar tonsils are normal in position. The pituitary bright spot is preserved. Intracranial arterial flow voids are patent. Mild subgaleal collection at the posterior scalp. The orbits are unremarkable. Mild paranasal sinus disease. Mild effusion of the right greater than left mastoid air cells.

Impression:
Changes related to severe HIE, as described above.

Right cerebellar hemisphere parenchymal hemorrhage.

Transthoracic Echocardiogram Report

NAME:	BB-TATUM BLUE	DOB: 2/8/2022	Ht: 53.0 cm
PT ID#:	E003047593	Age: 8 days	Wt: 3.0 kg
STUDY DATE:	2/16/2022 3:12:31 PM	Sex: M	BSA: 0.21 m
Acc N:	202202160157CVIS		BP: 66/32 mmHg

Ordering Physician: BERER1 Erynn Bergner
Sonographer: Megan Hix
Diagnosing Physician: Umakumaran Ponniah, MD.

Procedure(s) Performed: Transthoracic Echocardiogram: Congenital complete (2D, Spectral Doppler, Color Flow) - 93303; -93320; -93325

Indication: SIGNS/SYMPTOMS: MURMUR NOS-R01.1
Diagnosis: SIGNS/SYMPTOMS: MURMUR NOS-R01.1
Study Info: The images were of adequate diagnostic quality.
Location: NICU

Summary:
1. Patent foramen ovale, small with a left to right interatrial shunt.
2. Trivial tricuspid valve insufficiency.
3. Trivial mitral valve insufficiency.
4. No patent ductus arteriosus.
5. Normal right ventricular cavity size and systolic function.
6. Normal left ventricular cavity size and systolic function.

Segmental Cardiotype, Cardiac Position, and Situs:
S,D,S. The heart position is within the left hemithorax. The cardiac apex is oriented leftward. The aorta is to the right of the pulmonary artery. There is visceral situs solitus.
Systemic Veins:
The superior vena cava is right-sided and drains normally to the right atrium. The superior vena cava flow profile is normally phasic. The innominate vein is present and of normal caliber. The inferior vena cava is right-sided and inserts into the right atrium normally.
Pulmonary Veins:
At least one pulmonary vein on each side drains to the left atrium.
Atria:

No atrial septal defect is detected. There is a small patent foramen ovale. Predominantly left to right flow across the interatrial septum. The right atrium is normal in size. The left atrium is normal in size.
Mitral Valve:
The mitral valve is normal. Mitral inflow is laminar, with normal Doppler velocity pattern. There is no evidence of mitral valve stenosis. The papillary muscle configuration appears normal. There is trivial mitral valve

insufficiency.

Tricuspid Valve:
The tricuspid valve is normal.
Tricuspid inflow is laminar, with normal Doppler velocity pattern. There is trivial (physiologic) tricuspid valve insufficiency. There is no evidence of tricuspid valve stenosis.
AV Canal/Complex Inlet/Single Ventricle:
The crux of the heart is normal.
Left Ventricle:

Left ventricular cavity size and systolic function are normal. Left Ventricle diastolic dimension is 1.93 cm, Z score of -0.29. Left Ventricle systolic dimension is 1.37 cm, Z score of 0.87. The fractional shortening of the left ventricle is 29.0 %.
Right Ventricle:
Right ventricular cavity size and systolic function are normal. TR peak gradient is 27.2 mmHg.
VSD:

There is no evidence of ventricular septal defect.
Conotruncal Anatomy:
Normal conotruncal anatomy.
Left Ventricular Outflow Tract and Aortic Valve:
There is no evidence of left ventricular outflow obstruction. The aortic valve is normal. Transaortic flow is laminar, with normal Doppler velocity pattern. Based on Doppler velocities, there is no aortic transvalvular flow obstruction. There is no evidence of aortic valve insufficiency.
Right Ventricular Outflow Tract and Pulmonary Valve:
There is no evidence of right ventricular outflow obstruction. The pulmonary valve is normal.
Transpulmonary flow is laminar, with normal Doppler velocity pattern. Based on Doppler velocities, there is no pulmonary transvalvular flow obstruction. Trivial pulmonary valve insufficiency.
Aorta:
The (aortic) sinuses of Valsalva segment is normal. The ascending aorta is normal. The transverse aortic arch segment is normal. There is a left aortic arch with normal branching pattern of the brachiocephalic arteries. The flow pattern in the aorta is normal. There is no evidence of coarctation of the aorta.
Pulmonary Arteries:

There is no evidence of supravalvular pulmonary artery stenosis. The main pulmonary artery is normal. The left branch pulmonary artery is normal. The right branch pulmonary artery is normal.
Ductus Arteriosus:
There is no evidence of a patent ductus arteriosus.
Coronary Arteries:
Left main and right coronary artery structures are normal.
Pericardium:
There is no evidence ofpericardial effusion.

Attending Doctor: Bergner,Erynn MD
Date: 02/16/22

NEONATAL SERVICES DAILY PROGRESS NOTE
3050 gram, 40 + 1/7 week AGA male => 3490 grams; corrected gestational age 41 + 2/7 weeks.
Active Problems: Seizure disorder (identified 2/8/22)
neonatal encephalopathy (identified 2/16/22)

PHYSICAL EXAM (at 2/16/22 7:52)
Weight - 3490 grams (+20 grams) - 23%ile ; Z-score = -0.75
Vital Signs: HR - 110, RR - 42, O2 Sat - 97%, Temp - 36.6 degrees
General: Term infant under radiant warmer, on LFNC and in no acute distress. Skin pale pink, warm, and dry.
HEENT: Anterior fontanelle open, soft, and flat with sutures approximated. Eyes clear. Ears in normal shape and position. Oral mucosa pink and moist, palate intact.
Chest: Chest rise symmetrical with clear breath sounds bilaterally.
Heart: Normal sinus rhythm, normal perfusion and pulses, no murmur.
Abdomen: Soft and non-distended, non-tender with active bowel sounds.
Extremities: Moving all extremities equally.
Neuro: Active, responsive, normal tone for gestational age.

FLUIDS, ELECTROLYTES, NUTRITION
Objective: Weight today 3490 grams, up 20 grams from 2/15. Gained 40.0 grams/day/3 days.
On a radiant warmer with a set temperature of 35.8 degrees.
Input: 513 ml.
147 ml/kg/day (enteral - 79%/parenteral - 21%); 88 cal/kg/day (enteral - 88%/parenteral - 12%).
Output: Urine - 326 ml/day (3.9 ml/kg/hr).
Stools - 6 (Last stool: 8 AM 2/16).
The baby was on TPN for 7 days from 2/8 to 2/14.
Protein - 1.6 gram/kg/day; Fat - 4.2 gram/kg/day; Carbohydrate - 11.5 gram/kg/day.
FEEDINGS: On SAdv20 (0.68 cals/ml) and HM-T (0.64 cals/ml), 42-52 ml; last feed: 58 ml of SAdv20; no residuals. 8 feedings received; none nippled. Gavage feeds given over 40-45 minutes.
From 2/13: Na 140, K 4.3, Cl 102, Bicarb 22.0, Glucose 62, Ca 9.6, Phos 6.0, BUN 13.0, Creat 0.5, Mg 1.9, Triglycerides 206.
From 2/12: Glucose bld-75, Ca (ionized) 1.31, Lactate 1.4.
Appraisal: Infant tolerating advancing enteral feeds of Sim Term with supplemental with clears @ 140 ml/kg/day. Electrolytes as listed. Voiding and stooling. Weight gain noted overnight. Speech consulted, holding PO feeds due to concern for aspiration and respiratory status.
Plan: Advance enteral feeds to 150 ml/kg/d

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

Discontinue D10W and heplock PICC.
Speech Pathologist recommends PO feeds twice a day
Continue to follow speech pathology recommendations.
Will continue to assess nutritional intake, output, and growth trend.

RESPIRATORY
Objective: Respiratory rate for yesterday: average 47, range 29-74; for the past 8 hours: average 47, range 34-56.
O2 sats for yesterday: average 97, range 92-100; for the past 8 hours: average 97, range 95-100.
2/16 7:50: RA.
From 2/12 17:53: Capillary blood gases: pH 7.41, pCO2 44, pO2 41, base excess 2.4.
No A and B events since 2/14.
Appraisal: Infant weaned to RA this morning.
Plan: Continue to monitor.

HEMATOLOGY
Objective: Blood out so far - 9.6 ml (never transfused).
From 2/12: Hgb 14.5, Hct 43.0.
From 2/10: Platelets 239,000.
Appraisal: Heme Labs stable.
Plan: Continue to monitor.
Limit lab draws as able.

INFECTIOUS DISEASE
Objective: Temperature range over the past day: 36.5-37.4 degrees; temperature over the past 8 hours: 36.6 degrees.
From 2/10: CRP - <3.0.
Appraisal: NO current concern for infection.
Plan: Continue to monitor

CARDIOVASCULAR
Objective: Heart rate for yesterday: average HR 120, range 100-144; for the past 8 hours: average HR 116, range 100-135.
Blood pressure for yesterday: average cuff BP - 56/28(37 mean), range - 51-60/24-35(32-42 mean).
The infant passed the critical congenital heart disease screening at 108.8 hours of age.
Appraisal: Hemodynamically stable.
Plan: Continue to monitor clinically.
Obtain Echo to rule out congenital anomalies.

NEUROLOGY
Objective: Over the past 24 hours, Phenobarbital level: 2/13 - 39.9 No medications were given.
Appraisal: Seizures. Currently receiving Keppra and Phenobarbital. Last noted seizures was on 2/12. Epilepsy genetic workup pending. MRI (2/15) showed changes related to severe HIE.
Plan: Continue phenobarb and Levetiracetam
Continue to follow neurology recommendations.

IMMUNIZATIONS
Appraisal: Hepatitis B #1 given on 2/8 at RH.

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

Plan: Continue to follow AAP guidelines for vaccine schedule.

GENETICS, ENDOCRINE, METABOLIC
Objective: Ca 9.6, Phos 6.0, Alkaline phosphatase 111 (from 2/13).
Appraisal: State NB metabolic screen sent at 24 hours of life, consistent with TPN.
Metabolic workup in progress due to seizures.
Workup includes: Ammonia level 83, pyruvic acid (0.4 normal), serum AA elevated levels but not consistent with inherited metabolic disease, UA Organic acid and reducing substances (pending)
Plan: Continue to monitor.
Follow results of labs pending.
Repeat NBS at 14 days of life.

SOCIAL
Appraisal: Mom and Dad have been updated at bedside during rounds, questions answered.
Plan: Continue to update on plan of care.

IN-PATIENT DEVELOPMENTAL INTERVENTIONS
Appraisal: Infant at risk of developmental delays due hospitalization and seizures.
Plan: Continue to follow developmental needs while in the unit.
NICU PT/OT ordered.

CURRENT MEDICATIONS
Levetiracetam (Keppra), 40 mg enterally q12h (11.5 mg/kg/dose, 22.9 mg/kg/day) started on 2/14/22
PHENObarbital, 15 mg enterally q24h (4.3 mg/kg/day) started on 2/14/22

I personally examined the patient, reviewed and updated the history and assessment, and developed the plan of care with the multidisciplinary team as documented in this note. Jumoke A. Ogunfolu, NNP Student assisted me in the care of the patient and preparation of this note.

The patient requires intensive monitoring of cardiorespiratory stability, growth, nutrition, and I and O.

Neurology Progress Note

Subjective

5-day-old baby boy born at 40 weeks of gestation via artificial rupture of membranes, delivery significant for meconium stained amniotic fluid, transferred from Durant Medical Center 2/8/22 to OU Children's Center NICU for higher level of workup and care after presenting with low APGARs of 2, 6, and 7 and spells of apnea and leg twitching concerning for possible seizures due to a possible hypoxic ischemic event vs sepsis s/p phenobarbital loads (30 mg/kg in total).

UPDATES:
02/12: EEG report up till 1700 demonstrated marked improvement from last tracing with prominent left temporal sharp transients and rare brief rhythmic discharges, but no seizures. However, overnight, EEG demonstrated numerous seizures.

02/13: Seizures until 1124 on 02/12 (following fosphenytoin load @ 1056). Afterward, rare BRDs over left central and centromidline regions (C3/Cz) but no definite seizures. Remained seizure-free for the rest of 02/12 until 2128 (end of EEG attending's review, next review this morning still pending).

02/14: No seizures overnight (one push-button event at 1819 with no electrographic evidence of seizures) or in the last 24 hours. Will obtain epilepsy gene panel swab today or tomorrow. Possibly going for MRI brain today.

02/15: Serum AA profile not overly consistent with an inherited metabolic disorder, but several species elevated. No MRI was obtained yesterday.

02/16: NAEON, exam stable. Will discuss imaging findings with mother of patient today if she's at bedside.

Physical Exam

GEN: awake
HEENT: ant fontanelle soft, open, flat
ABD: soft

NEURO:
Lang/Ment: non-verbal, arouses to touch; one apneic event during exam
CN: pupils equally round and reactive to light; oculocephalic reflex present, symm face, responds to touch, tongue midline on protrusion
Motor: normal tone, healthy flexed posture, moving all extremities

Patient: BLUE,BB-TATUM Unit#: E003047593
Date: 02/16/22 Acct#: E00677497957

Sens: responds appropriately to touch/tickle
Coord: no abnormal movements
Reflexes: 2+, plantar extensor response bilaterally, +grasp, +rooting
Gait: deferred

Assessment
- Apnea episodes concerning for seizure, resolved
  - Seizures resolved on 02/12/2022 @ 1124
- Hypoxic ischemic encephalopathy (previously did not appear clinically to be HIE, but metabolic w/up negative)

Levels:
- Phenobarbital: 29.4 --> 39.1 --> 36.7 --> 39.9
- Free phenytoin: 1.41 --> 2.12

RECOMMENDATION:
- Restarted continuous EEG for further monitoring
- Neurochecks
- Seizure/aspiration precautions
- Phenobarbital 4.7 mg BID (7.2 mg/kg/dose = 1.8 mL BID)
- Levetiracetam 40 mg BID (~26 mg/kg/day = 0.4 mL BID)
- For more seizures, can give fosphenytoin 10 mg/kg load with free phenytoin level check 2 hours after
- Metabolic panel:
  - Serum amino acids - not overly consistent with inherited metabolic disorder
  - Ammonia - 83
  - Pyruvate - 0.4
- Epilepsy genetic testing -- swabbed on 02/15, pending (to be follow up in outpatient setting)

Outpatient follow-up with Dr. Chrusciel at neurology clinic 3 months after discharge. Parents will have to call 405-271-2244 to schedule appointment.

Discussed with attending physician of record during morning rounds.

Date: 02/17/22

NEONATAL SERVICES DAILY PROGRESS NOTE
3050 gram, 40 + 1/7 week AGA male => 3550 grams; corrected gestational age 41 + 3/7 weeks.
Active Problems: Seizure disorder (identified 2/8/22)
neonatal encephalopathy (identified 2/16/22)

PHYSICAL EXAM (at 2/17/22 9:20)
Weight - 3550 grams (+60 grams) - 25%ile ; Z-score = -0.69
Vital Signs: HR - 129, RR - 45, BP - 68/44 (mean 53), O2 Sat - 98%, Temp - 36.6 degrees
General: Term infant under radiant warmer (no heat), stable room air and in no acute distress. Skin pale pink, warm, and dry.
HEENT: Anterior fontanelle open, soft, and flat with sutures approximated. Eyes clear. Oral mucosa pink and moist. NGT secure.
Chest: Chest rise symmetrical with clear breath sounds bilaterally.
Heart: Normal sinus rhythm, normal perfusion and pulses, no murmur.
Abdomen: Soft and non-distended, non-tender with active bowel sounds.
Extremities: Moving all extremities equally.
Neuro: Active, responsive, normal tone for gestational age.

FLUIDS, ELECTROLYTES, NUTRITION
Objective: Weight today 3550 grams, up 60 grams from 2/16. Gained 46.7 grams/day/3 days. In an open crib.
Input: 521 ml.
147 ml/kg/day (enteral - 98%/parenteral - 2%); 98 cal/kg/day (enteral - 99%/parenteral - 1%).
Output: Urine - 401 ml/day (4.7 ml/kg/hr) and 1.
Stools - 4 (Last stool: 9 AM 2/17).
The baby was on TPN for 7 days from 2/8 to 2/14.
Protein - 2.0 gram/kg/day; Fat - 5.2 gram/kg/day; Carbohydrate - 11.0 gram/kg/day.
FEEDINGS: On SAdv20 (0.68 cals/ml) and HM-T (0.64 cals/ml), 58-65 ml; last feed: 65 ml of SAdv20; no residuals. 8 feedings received; 25% nippled. Some gavage feeds given over 40-45 minutes.
From 2/13: Na 140, K 4.3, Cl 102, Bicarb 22.0, Glucose 62, Ca 9.6, Phos 6.0, BUN 13.0, Creat 0.5, Mg 1.9, Triglycerides 206.
From 2/12: Glucose bld-75, Ca (ionized) 1.31, Lactate 1.4.
Appraisal: Infant tolerating full enteral feeds of Sim Term, PO fed x2 (took all); ST consulting. Good UOP and stooling. Weight gain noted.
Plan: Continue on full enteral feeds of SimTerm formula for 150 ml/kg/day, PO BID per ST recs.
Will continue to assess nutritional intake, output, and growth trend.
Heparin lock PICC.

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

RESPIRATORY
Objective: Respiratory rate for yesterday: average 51, range 31-62; for the past 8 hours: average 54, range 44-65.
O2 sats for yesterday: average 97, range 91-100; for the past 8 hours: average 98, range 95-100.
2/17 1:06: RA.
From 2/12 17:53: Capillary blood gases: pH 7.41, pCO2 44, pO2 41, base excess 2.4.
No A and B events since 2/14.
Appraisal: Stable in room air.
Plan: Monitor respiratory status.

HEMATOLOGY
Objective: Blood out so far - 9.6 ml (never transfused).
From 2/12: Hgb 14.5, Hct 43.0.
Appraisal: Heme Labs stable.
Plan: Continue to monitor.
Limit lab draws as able.

INFECTIOUS DISEASE
Objective: Temperature range over the past day: 36.5-37.5 degrees; temperature over the past 8 hours: 36.6-37.5 degrees.
Appraisal: No current concern for infection.
Plan: Continue to monitor

CARDIOVASCULAR
Objective: Heart rate for yesterday: average HR 120, range 103-139; for the past 8 hours: average HR 136, range 115-153.
Blood pressure for yesterday: average cuff BP - 69/37(48 mean), range - 66-72/32-41(44-51 mean); for the past 8 hours: average cuff BP - 68/44(53 mean), range - 68/44(53 mean).
The infant passed the critical congenital heart disease screening at 108.8 hours of age.
Appraisal: Hemodynamically stable.
ECHO on 2/16 d/t congenital anomalies; small PFO and no PDA.
Plan: Continue to monitor clinically.

NEUROLOGY
Objective: Over the past 24 hours, Phenobarbital level: 2/13 - 39.9 No medications were given.
Appraisal: Seizures on Keppra and Phenobarbital. Last noted seizures was on 2/12. Epilepsy genetic workup pending. MRI (2/15) showed changes related to severe HIE. Also has R cerebellar hemorrhage; neurology rec to obtain CT and coags (ordered on 2/17 with pending results).
Plan: Continue phenobarb and Levetiracetam
Continue to follow neurology recommendations.
Monitor result of head CT d/t R cerebellar hemorrhage and coags per neurology recs.

IMMUNIZATIONS
Appraisal: Hepatitis B #1 given on 2/8 at RH.
Plan: Continue to follow AAP guidelines for vaccine schedule.

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

GENETICS, ENDOCRINE, METABOLIC
Objective: Ca 9.6, Phos 6.0, Alkaline phosphatase 111 (from 2/13).
Appraisal: State NB metabolic screen sent at 24 hours of life, consistent with TPN.
Metabolic workup in progress due to seizures. Workup includes: Ammonia level 83, pyruvic acid (0.4 normal), serum AA elevated levels but not consistent with inherited metabolic disease, UA Organic acid and reducing substances (pending).
Plan: Continue to monitor.
Follow results of labs pending.
Repeat NBS at 14 days of life.

SOCIAL
Appraisal: Mom and Dad have been updated when able.
Plan: Continue to update on plan of care.

IN-PATIENT DEVELOPMENTAL INTERVENTIONS
Appraisal: Infant at risk of developmental delays due hospitalization and seizures.
Plan: Continue to follow developmental needs while in the unit.
NICU PT/OT ordered.

CURRENT MEDICATIONS
Levetiracetam (Keppra), 40 mg enterally q12h (11.3 mg/kg/dose, 22.5 mg/kg/day) started on 2/14/22
PHENObarbital, 15 mg enterally q24h (4.2 mg/kg/day) started on 2/14/22

I personally examined the patient, reviewed and updated the history and assessment, and developed the plan of care with the multidisciplinary team as documented in this note. Caitlin Lieng, NNP assisted me in the care of the patient and preparation of this note.

The patient needs intensive monitoring of nutrition, I and O, growth, and cardiorespiratory stability.

PATIENT: BLUE,BB-TATUM UNIT No: E003047593
ACCOUNT#: E00677497957 ROOM: EU.7172
REPORT AUTHOR: Rabbani,Bahram DO

Rabbani,Bahram X DO 02/17/22 0649:
Neurology Progress Note

Subjective

9-day-old baby boy born at 40 weeks of gestation via artificial rupture of membranes, delivery significant for meconium stained amniotic fluid, transferred from Durant Medical Center 2/8/22 to OU Children's Center NICU for higher level of workup and care after presenting with low APGARs of 2, 6, and 7 and spells of apnea and leg twitching concerning for possible seizures due to a possible hypoxic ischemic event vs sepsis s/p phenobarbital loads (30 mg/kg in total).

UPDATES:
02/12: EEG report up till 1700 demonstrated marked improvement from last tracing with prominent left temporal sharp transients and rare brief rhythmic discharges, but no seizures. However, overnight, EEG demonstrated numerous seizures.

02/13: Seizures until 1124 on 02/12 (following fosphenytoin load @ 1056). Afterward, rare BRDs over left central and centromidline regions (C3/Cz) but no definite seizures. Remained seizure-free for the rest of 02/12 until 2128 (end of EEG attending's review, next review this morning still pending).

02/14: No seizures overnight (one push-button event at 1819 with no electrographic evidence of seizures) or in the last 24 hours. Will obtain epilepsy gene panel swab today or tomorrow. Possibly going for MRI brain today.

02/15: Serum AA profile not overly consistent with an inherited metabolic disorder, but several species elevated. No MRI was obtained yesterday.

02/16: NAEON, exam stable. Will discuss imaging findings with mother of patient today if she's at bedside (diffuse HIE, right cerebellar IPH).

02/17: Spoke with NICU provider yesterday about repeating CTH to monitor R cerebellar IPH which can be done today when able. Exam remains stable.

Objective

Per NICU charting

Physical Exam

GEN: asleep but easily arousable
HEENT: ant fontanelle soft, open, flat
ABD: soft

Patient: BLUE,BB-TATUM Unit#: E003047593
Date: 02/17/22 Acct#: E00677497957

NEURO:
Lang/Ment: non-verbal, arouses to touch
CN: pupils equally round and reactive to light; oculocephalic reflex present, symm face, responds to touch, tongue midline on protrusion
Motor: normal tone, healthy flexed posture, moving all extremities
Sens: responds appropriately to touch/tickle
Coord: no abnormal movements
Reflexes: 2+, plantar extensor response bilaterally, +grasp, +rooting
Gait: deferred

Assessment
- Apnea episodes concerning for seizure, resolved
  - Seizures resolved on 02/12/2022 @ 1124
- Hypoxic ischemic encephalopathy (previously did not appear clinically to be HIE, but metabolic w/up negative)

Levels:
- Phenobarbital: 29.4 --> 39.1 --> 36.7 --> 39.9
- Free phenytoin: 1.41 --> 2.12

RECOMMENDATION:
- Neurochecks
- Seizure/aspiration precautions
- **Please check a PT/INR today**
- **Please check CT head to follow up on the right cerebellar IPH (communicated verbally to NICU team on 02/16)**
- Phenobarbital 4.7 mg BID (7.2 mg/kg/dose = 1.8 mL BID)
- Levetiracetam 40 mg BID (~26 mg/kg/day = 0.4 mL BID)
- For more seizures, can give fosphenytoin 10 mg/kg load with free phenytoin level check 2 hours after
- Metabolic panel:
  - Serum amino acids - not overly consistent with inherited metabolic disorder
  - Ammonia - 83
  - Pyruvate - 0.4
- Epilepsy genetic testing -- swabbed on 02/15, pending (to be follow up in outpatient setting)

Outpatient follow-up with Dr. Chrusciel at neurology clinic 3 months after discharge. Parents will have to call 405-271-2244 to schedule appointment.

Discussed with attending physician of record during morning rounds.

PURCARIN,GABRIELA 03/16/22 0741:
Neurology Attending Note

Patient: BLUE,BB-TATUM
Date: 02/17/22
Unit#: E003047593
Acct#: E00677497957

Attending Note
I have examined this patient on 2/17/22 and personally reviewed all labs and studies. I discussed the patient's management with the residents and reviewed the resident's note. I agree with the documented findings and plan of care unless amended below: phenobarbital dose is 7.2mg(1.8ml) BID.

Coags are normal and head CT showed stable size of the cerebellar hematoma. Neuro exam continues to be reassuring

ADMISSION CLINICAL DATA: APNEA

EXAMS:	CPT:
007133822 CT BRAIN WO CONTRAST	70450

REASON FOR EXAM: R cerebellar hemorrhage on MRI

EXAM PERFORMED: - CT BRAIN WO CONTRAST

TECHNIQUE:
Routine noncontrast CT brain imaging in bone and soft tissue algorithm. Coronal and sagittal reformats were obtained.

CONTRAST:
None

COMPARISON:
MR brain on 2/14/2022.

FINDINGS:
Changes related to hypoxic ischemic injury are better evaluated on the recent MR study on 2/14/2022. Areas of loss of gray-white matter differentiation within the bilateral frontal lobes correspond to the known areas of hypoxic ischemic injury. The ventricles are mildly decreased in size when compared to the previous MR, which may be related to edema associated with hypoxic ischemic injury. The right cerebellar parenchymal hematoma is unchanged.

No extra axial axial collection. No definite additional acute hemorrhage. No midline shift. The basal cisterns are patent. The cerebellar tonsils are normal in position. The orbits are unremarkable. The mastoid air cells and middle ear cavities are clear. The paranasal sinuses are clear. Partially visualized nasogastric tube. No acute osseous abnormalities.

IMPRESSION:
Changes related to hypoxic ischemic injury are better evaluated on the recent MR study on 2/14/2022.

The ventricles are mildly decreased in size when compared to the previous MR, which may be related to edema associated with hypoxic ischemic injury.

The right cerebellar parenchymal hematoma is unchanged.

Date: 02/18/22

NEONATAL SERVICES DAILY PROGRESS NOTE
3050 gram, 40 + 1/7 week AGA male => 3505 grams; corrected gestational age 41 + 4/7 weeks.
Active Problems: Seizure disorder (identified 2/8/22)
neonatal encephalopathy (identified 2/16/22)

PHYSICAL EXAM (at 2/18/22 7:03)
Weight - 3505 grams (-45 grams) - 20%ile ; Z-score = -0.85
Vital Signs: HR - 120, RR - 44, BP - 62/44 (mean 49), O2 Sat - 96%, Temp - 36.8 degrees
General: Term infant under radiant warmer (no heat), stable room air and in no acute distress. Skin pale pink, warm, and dry.
HEENT: Anterior fontanelle open, soft, and flat with sutures approximated. Eyes clear. Oral mucosa pink and moist. NGT secure.
Chest: Chest rise symmetrical with clear breath sounds bilaterally.
Heart: Normal sinus rhythm, normal perfusion and pulses, no murmur.
Abdomen: Soft and non-distended, non-tender with active bowel sounds.
Extremities: Moving all extremities equally.
Neuro: Active, responsive, normal tone for gestational age.

FLUIDS, ELECTROLYTES, NUTRITION
Objective: Weight today 3505 grams, down 45 grams from 2/17. Gained 11.7 grams/day/3 days. In an open crib.
Input: 525 ml = 150 ml/kg/day (all enteral); 101 cal/kg/day.
Output: Urine - 336 ml/day (4.0 ml/kg/hr) and 1.
Stools - 4 (Last stool: 6 AM 2/18).
The baby was on TPN for 7 days from 2/8 to 2/14.
Protein - 2.1 gram/kg/day; Fat - 5.5 gram/kg/day; Carbohydrate - 11.1 gram/kg/day.
FEEDINGS: On SAdv20 (0.68 cals/ml), 65-70 ml; last feed: 70 ml; no residuals. 8 feedings received; 63% nippled. Gavage feeds given over 45 minutes.
From 2/13: Na 140, K 4.3, Cl 102, Bicarb 22.0, Glucose 62, Ca 9.6, Phos 6.0, BUN 13.0, Creat 0.5, Mg 1.9, Triglycerides 206.
From 2/12: Glucose bld-75, Ca (ionized) 1.31, Lactate 1.4.
Appraisal: Infant tolerating full enteral feeds of Sim Term, PO fed x2 (took all); ST consulting. Good UOP and stooling. Small weight loss noted.
Plan: Continue on full enteral feeds of SimTerm formula for 150 ml/kg/day, PO BID per ST recs.
Will continue to assess nutritional intake, output, and growth trend.
Discontinue PICC line

RESPIRATORY
Objective: Respiratory rate for yesterday: average 43, range 28-65; for the past

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

8 hours: average 38, range 28-45.
O2 sats for yesterday: average 98, range 95-100; for the past 8 hours: average 99, range 96-100.
2/18 9:00: RA.
From 2/12 17:53: Capillary blood gases: pH 7.41, pCO2 44, pO2 41, base excess 2.4.
No A and B events since 2/14.
Appraisal: Stable in room air.
Plan: Monitor respiratory status.

HEMATOLOGY
Objective: Blood out so far - 9.6 ml (never transfused).
From 2/12: Hgb 14.5, Hct 43.0.

2/17/22 12:35: Coags: PT - 10.9, PTT - 35.2.
Appraisal: Heme Labs stable.
Plan: Continue to monitor.
Limit lab draws as able.

BILIRUBIN

Objective: Serum bili 1.0 on 2/13.
Mother's blood type B Positive.
The infant was not treated with phototherapy.
The maximum total bilirubin was 5.2 on 2/10 and the maximum direct bilirubin was 0.3 on 2/9.
Appraisal: Mom's blood type is B+. T bili remains well below threshold of treatment.
Plan: Continue to monitor clinically.

INFECTIOUS DISEASE
Objective: Temperature range over the past day: 36.5-37.5 degrees; temperature over the past 8 hours: 36.8-37.0 degrees.
Appraisal: No current concern for infection.
Plan: Continue to monitor

CARDIOVASCULAR
Objective: Heart rate for yesterday: average HR 132, range 105-166; for the past 8 hours: average HR 126, range 107-166.
Blood pressure for yesterday: average cuff BP - 65/44(51 mean), range - 62-68/44(49-53 mean); for the past 8 hours: average cuff BP - 62/44(49 mean), range - 62/44(49 mean).
The infant passed the critical congenital heart disease screening at 108.8 hours of age.
Appraisal: Hemodynamically stable.
ECHO on 2/16 d/t congenital anomalies; small PFO and no PDA.
Plan: Continue to monitor clinically.

NEUROLOGY
Objective: Over the past 24 hours, Phenobarbital level: 2/13 - 39.9 No medications were given.
Appraisal: Seizures on Keppra and Phenobarbital. Last noted seizures was on 2/12. Epilepsy genetic workup pending. MRI (2/15) showed changes related to severe HIE. Also has R cerebellar hemorrhage; neurology rec to obtain CT (done 2/17)-->The ventricles are mildly decreased in size when compared to the

previous MR, which may be related to edema associated with hypoxic ischemic injury. The right cerebellar parenchymal hematoma is unchanged). Coags (are wnl)
Plan: Continue phenobarb and Levetiracetam
Continue to follow neurology recommendations.

GASTROINTESTINAL
Objective: From 2/13: T Prot 4.8, Alb 3.1, AST(SGOT) 39, ALT(SGPT) 23.
Appraisal: Normal abdominal exam and stooling pattern. Tolerating advancing enteral feedings.
Plan: Continue to monitor stooling pattern and quantity.

GENITOURINARY
Objective: Urine output: 137 ml (4.9 ml/kg/hr) and 1 over the past 8 hours and 4.0 ml/kg/hr and 1 over the past 24 hours. On 2/13, BUN 13.0 and creatinine 0.4.
Appraisal: Normal renal function for age.
Plan: Continue to monitor clinically. Monitor UOP.

IMMUNIZATIONS
Appraisal: Hepatitis B #1 given on 2/8 at RH.
Plan: Continue to follow AAP guidelines for vaccine schedule.

GENETICS, ENDOCRINE, METABOLIC
Objective: Ca 9.6, Phos 6.0, Alkaline phosphatase 111 (from 2/13).
Appraisal: State NB metabolic screen sent at 24 hours of life, consistent with TPN.
Metabolic workup in progress due to seizures. Workup includes: Ammonia level 83, pyruvic acid (0.4 normal), serum AA elevated levels but not consistent with inherited metabolic disease, UA Organic acid and reducing substances (pending).
Plan: Continue to monitor.
Follow results of labs pending.
Repeat NBS at 14 days of life.

SOCIAL
Appraisal: Mom and Dad have been updated when able.
Plan: Continue to update on plan of care.

IN-PATIENT DEVELOPMENTAL INTERVENTIONS
Appraisal: Infant at risk of developmental delays due hospitalization and seizures.
Plan: Continue to follow developmental needs while in the unit.

NICU PT/OT ordered.

CURRENT MEDICATIONS
Levetiracetam (Keppra), 40 mg enterally q12h (11.4 mg/kg/dose, 22.8 mg/kg/day) started on 2/14/22
PHENObarbital, 15 mg enterally q24h (4.3 mg/kg/day) started on 2/14/22

I personally examined the patient, reviewed and updated the history and assessment, and developed the plan of care with the multidisciplinary team as documented in this note. Claudia M. Kinslow, APRN, NNP - BC assisted me in the care of the patient and preparation of this note.

The patient requires intensive monitoring of cardiorespiratory stability,

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

growth, nutrition, and I and O.
I provided 30 minutes of care.

NEONATAL SERVICES DAILY PROGRESS NOTE
3050 gram, 40 + 1/7 week AGA male => 3505 grams; corrected gestational age 41 + 5/7 weeks.
Active Problems: Seizure disorder (identified 2/8/22)
neonatal encephalopathy (identified 2/16/22)

PHYSICAL EXAM (at 2/19/22 6:35)
Weight - 3505 grams (0 grams) - 18%ile ; Z-score = -0.91
Vital Signs: HR - 131, RR - 51, O2 Sat - 99%, Temp - 37.0 degrees
General: Term infant under radiant warmer (no heat), stable room air and in no acute distress. Skin pale pink, warm, and dry.
HEENT: Anterior fontanelle open, soft, and flat with sutures approximated. Eyes clear. Oral mucosa pink and moist. NGT secure.
Chest: Chest rise symmetrical with clear breath sounds bilaterally.
Heart: Normal sinus rhythm, normal perfusion and pulses, no murmur.
Abdomen: Soft and non-distended, non-tender with active bowel sounds.
Extremities: Moving all extremities equally.
Neuro: Active, responsive, normal tone for gestational age.

FLUIDS, ELECTROLYTES, NUTRITION
Objective: Weight today 3505 grams, unchanged from 2/18. Gained 40.7 grams/day/7 days. In an open crib.
Input: 590 ml = 168 ml/kg/day (all enteral); 114 cal/kg/day.
Output: Urine - 469 ml/day (5.6 ml/kg/hr).
Stools - 5 (Last stool: 6 AM 2/19).
The baby was on TPN for 7 days from 2/8 to 2/14.
Protein - 2.4 gram/kg/day; Fat - 6.1 gram/kg/day; Carbohydrate - 12.5 gram/kg/day.
FEEDINGS: On SAdv20 (0.68 cals/ml), 40-75 ml; last feed: 50 ml; no residuals. 9 feedings received; 100% nippled.
From 2/13: Na 140, K 4.3, Cl 102, Bicarb 22.0, Glucose 62, Ca 9.6, Phos 6.0, BUN 13.0, Creat 0.5, Mg 1.9, Triglycerides 206.
Appraisal: Infant tolerating full enteral feeds of Enfamil PO fed x2 (took all); ST consulting. Good UOP and stooling well.
Plan: Continue on full enteral feeds of Enfamil formula for 150 ml/kg/day, PO BID per ST recs.
Will continue to assess nutritional intake, output, and growth trend.

RESPIRATORY
Objective: Respiratory rate for yesterday: average 45, range 27-65; for the past 8 hours: average 40, range 27-58.
O2 sats for yesterday: average 98, range 95-100; for the past 8 hours: average 98, range 96-100.

2/18 21:57: RA.
No A and B events since 2/14.
Appraisal: Stable in room air.
Plan: Continue to monitor respiratory status.

HEMATOLOGY
Objective: Blood out so far - 9.6 ml (never transfused).
2/17/22 12:35: Coags: PT - 10.9, PTT - 35.2.
Appraisal: Heme Labs stable.
Plan: Continue to monitor.
Limit lab draws as able.

BILIRUBIN
Objective: Serum bili 1.0 on 2/13.
Mother's blood type B Positive.
The infant was not treated with phototherapy.
The maximum total bilirubin was 5.2 on 2/10 and the maximum direct bilirubin was 0.3 on 2/9.
Appraisal: Mom's blood type is B+. T bili remains well below threshold of treatment.

Plan: Continue to monitor clinically.

INFECTIOUS DISEASE
Objective: Temperature range over the past day: 36.6-37.0 degrees; temperature over the past 8 hours: 36.7-37.0 degrees.
Appraisal: No current concern for infection.
Plan: Continue to monitor

CARDIOVASCULAR
Objective: Heart rate for yesterday: average HR 131, range 104-180; for the past 8 hours: average HR 128, range 104-158.
Blood pressure for yesterday: average cuff BP - 81/49(60 mean), range - 73-89/39-59(51-68 mean).
Appraisal: Hemodynamically stable.
ECHO on 2/16 d/t congenital anomalies; small PFO and no PDA.
Plan: Continue to monitor clinically.

NEUROLOGY
Objective: Over the past 24 hours, Phenobarbital level: 2/13 - 39.9
The infant passed the ABR test in both ears on 2/18. No medications were given.
Appraisal: Seizures on Keppra and Phenobarbital. Last noted seizures was on 2/12. Epilepsy genetic workup pending. MRI (2/15) showed changes related to severe HIE. Also has R cerebellar hemorrhage; neurology rec to obtain CT (done 2/17)-->The ventricles are mildly decreased in size when compared to the previous MR, which may be related to edema associated with hypoxic ischemic injury. The right cerebellar parenchymal hematoma is unchanged). Coags (are wnl)
Plan: Continue phenobarb and Levetiracetam
Continue to follow neurology recommendations.

GASTROINTESTINAL
Objective: From 2/13: T Prot 4.8, Alb 3.1, AST(SGOT) 39, ALT(SGPT) 23.
Appraisal: Normal abdominal exam and stooling pattern. Tolerating advancing enteral feedings.

Plan: Continue to monitor stooling pattern and quantity.

GENITOURINARY
Objective: Urine output: 179 ml (6.4 ml/kg/hr) over the past 8 hours and 5.6 ml/kg/hr over the past 24 hours. On 2/13, BUN 13.0 and creatinine 0.4.
Appraisal: Normal renal function for age.
Plan: Continue to monitor clinically. Monitor UOP.

IMMUNIZATIONS
Appraisal: Hepatitis B #1 given on 2/8 at RH.
Plan: Continue to follow AAP guidelines for vaccine schedule.

GENETICS, ENDOCRINE, METABOLIC
Objective: Ca 9.6, Phos 6.0, Alkaline phosphatase 111 (from 2/13).
Appraisal: State NB metabolic screen sent at 24 hours of life, consistent with TPN.
Metabolic workup in progress due to seizures. Workup includes: Ammonia level 83, pyruvic acid (0.4 normal), serum AA elevated levels but not consistent with inherited metabolic disease, UA Organic acid and reducing substances (pending).
Plan: Continue to monitor.
Follow results of labs pending.
Repeat NBS at 14 days of life.

SOCIAL
Objective: The Oklahoma Tobacco Helpline cessation referral does not apply for TATUM Blue on 02/18/2022.
Appraisal: Mom at bedside yesterday 2/18/discussed rooming in possible discharge soon.
Plan: Continue to update on plan of care.

IN-PATIENT DEVELOPMENTAL INTERVENTIONS
Appraisal: Infant at risk of developmental delays due hospitalization and seizures.
Plan: Continue to follow developmental needs while in the unit.
NICU PT/OT ordered.

CURRENT MEDICATIONS
Levetiracetam (Keppra), 40 mg enterally q12h (11.4 mg/kg/dose, 22.8 mg/kg/day) started on 2/14/22
PHENObarbital, 15 mg enterally q24h (4.3 mg/kg/day) started on 2/14/22

I personally examined the patient, reviewed and updated the history and assessment, and developed the plan of care with the multidisciplinary team as documented in this note. Claudia M. Kinslow, APRN, NNP - BC assisted me in the care of the patient and preparation of this note.

The patient needs intensive monitoring of nutrition, I and O, growth, and cardiorespiratory stability.
I provided 30 minutes of care.

OU MEDICAL CENTER
1200 Everett Drive
Oklahoma City, OK 73104

Name: BLUE,BB-TATUM
Account Number: E00677497957
Unit Number: E003047593
Room: EU.7172
Date Of Birth: 02/08/22
Attending Doctor: Bergner,Erynn MD
Date: 02/20/22

*** DISCHARGE SUMMARY ***
Baby: Parker Blue
Born: 2/8/22 6:20 (Tuesday)
Admitted: 2/8/22; Discharged: 2/20/22; LOS: 12 days
Mother: TATUM Blue
Phone: 580-371-6882

CHIEF COMPLAINT: 3050 gram male transferred from Durant Medical Center of Southeastern Oklahoma and admitted for possible seizure activity, r/o sepsis.

MOTHER'S HISTORY: 20 year-old G1P0000 unknown race female.
Blood type B Positive; Syphilis test - negative; rubella - positive (immune); Hepatitis B studies - negative; HIV - negative; herpes history - no history of prior infection; hepatitis history - no known history.

PREGNANCY HISTORY: EDC 2/7/22 => 40 + 1/7 weeks.
Uncomplicated pregnancy.
GBS Status: negative.
Prenatal tests: Normal prenatal testing.
Medications: Omeprazole. Steroids: No antenatal steroids were given.
No tobacco, alcohol, or drug use during pregnancy.

LABOR and DELIVERY: Induced labor, AROM with thick meconium.
Artificial rupture of membranes 2/7/22 at 18:45 (11.6 hours prior to delivery); vaginal delivery with epidural anesthesia. Born on 2/8/22 at 6:20.

INFANT: Male, birthweight 3050 grams (6 lbs 11.6 oz).
Apgars: 2 @1 min (HR-2, Resp-0, Tone-0, Reflex-0, Color-0)
6 @5 min (HR-2, Resp-1, Tone-1, Reflex-1, Color-1)
7 @10 min (HR-2, Resp-2, Tone-1, Reflex-1, Color-1)
Resuscitation steps: oxygen, face mask ventilation.
Per reports from RH: Infant was deep suctioned by delivering provider immediately after delivery. Taken to warmer, continued to deep suction. HR >100bpm from birth. Infant showed no respiratory effort, PPV was given for approximately 3minutes and continued to have irregular respirations. Infant taken to nursery and CPAP was initiated. Grunting subsided and infant was weaned to RA by approximately 4HOL Oral feedings were started and infant continued to do well. At approximately 10HOL infant noted to have apnea spells with color change and possible twitching of extremities. D/t concerns for seizure activity referral was initiated to transport infant to TCH. Infant again with seizure activity approximately 12HOL and was given loading dose of phenobarbital. NF team arrived to take over care, noted infant to be borderline lethargic following phenobarbital dose. NS bolus given in route for soft blood pressures.

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

No seizure activity noted by NF team on transport. Infant admitted to NICU in room air with relatively normal neurological exam.

ADMISSION PHYSICAL EXAM (at 2/8/22 22:53)
Weight - 3050 grams (6 lbs 11.6 oz) - 11%ile; Z-score = -1.21
General: 40+1/7 weeks AGA male -- exam compatible with dates. Infant in room air and in no distress. Skin pink, warm, and dry. Petechia to back and sides.
HEENT: Anterior fontanelle open, soft, and flat with sutures approximated. Moulding and caput with redness to scalp from presentation. Eyes clear. Red reflex present bilaterally. Pupils equally round and reactive to light. Oral mucosa pink and moist, palate intact. Ears in normal shape and position.
Chest: Chest rise symmetrical with clear breath sounds bilaterally.
Heart: Normal sinus rhythm, normal perfusion and pulses, no murmur.
Abdomen: Soft and non-distended, non-tender with active bowel sounds.
Genitals: Normal male genitalia. tests descended bilaterally. Anus: Patent anus in normal position.
Skeletal: No abnormalities noted. Extremities: Moving all extremities equally.
Neuro: Alert, active, responsive, normal tone for gestational age, normal primitive reflexes. Infant appropriately reactive to exam.
Jittery/jerking movements seen at RH. none appreciated on exam.

Exam by L. Donaldson, NNP.

LABS
Glucose:
* 2/8 23:09: 80 (Accuchek).

STABILIZATION
Infant admitted to the NICU in room air. Routine newborn assessment and protocols initiated.

MEDICATIONS
Acyclovir, 60 mg IV q8h (19.7 mg/kg/dose, 59 mg/kg/day) started on 2/8/22
Amikacin, 37 mg IV q24h (12.1 mg/kg/day) started on 2/8/22
Ampicillin, 300 mg IV q12h (98.4 mg/kg/dose, 197 mg/kg/day) started on 2/8/22
PHENObarbital, 15 mg IV q24h (4.9 mg/kg/day) started on 2/9/22

ALLERGIES and ADVERSE REACTIONS
No known allergies.

Status at discharge: 3050 gram, 40 + 1/7 week AGA male; now 3590 grams; corrected gestational age 41 + 6/7 weeks.

Hospital Course

FLUIDS, ELECTROLYTES, NUTRITION
Summary: -->NUTRITIONAL SUPPORT: Parenteral fluid with protein was started upon admission. The baby was on TPN for 6 days, lastly on 2/14. Enteral feeds were started on 2/10/22. The infant is currently receiving Sim Advance 20 cal.
-->ELECTROLYTES: Electrolytes stable thus far
-->LINES: PICC from 02/09 to 02/18.
Objective: Weight today 3590 grams, up 85 grams from 2/19. Gained 31.4 grams/day/7 days. In an open crib.
Input: 645 ml = 180 ml/kg/day (all enteral); 121 cal/kg/day.
Output: Urine - 523 ml/day (6.1 ml/kg/hr).

Stools - 8 (Last stool: 6 AM 2/20).
The baby was on TPN for 7 days from 2/8 to 2/14.
Protein - 2.5 gram/kg/day; Fat - 6.5 gram/kg/day; Carbohydrate - 13.3 gram/kg/day.
FEEDINGS: On SAdv20 (0.68 cals/ml) and HM-T (0.64 cals/ml), 50-105 ml; last feed: 105 ml of SAdv20; no residuals. 8 feedings received; 100% nippled.
Plan: Continue ad lib po feeding with standard formula
PCP will monitor growth

RESPIRATORY
Summary: Infant with meconium at delivery required PPV, suctioning and transitioned to CPAP. Eventually transitioned to RA.
Infant had apneic spell at 10 HOL concerning for seizures and was placed on CPAP. Weaned to NC on 2/15.
Stable to room air since 2/16 with no sign of respiratory distress

HEMATOLOGY
Summary: Stable CBC. Never transfused.

BILIRUBIN
Summary: Mother's blood type B Positive.
The infant was not treated with phototherapy.
The maximum total bilirubin was 5.2 on 2/10 and the maximum direct bilirubin was 0.3 on 2/9.
Serum bili 1.0 on 2/13.

INFECTIOUS DISEASE
Summary: Infectious workup started due to concerns of seizures. Maternal labs reassuring. Blood and CSF cultures sent. CBC and CRP reassuring. HSV CSF 1/2 negative, HSV PCR blood negative. Infant started on Ampicillin, Amikacin and Acyclovir. CSF negative and blood culture negative and final. Antibiotics and Acyclovir discontinued on 02/12.
Currently no clinical sign or symptom of infection.

CARDIOVASCULAR
Summary: Was hypotensive during transfer received NS bolus x1.
ECHO on 2/16 showed structurally normal heart with small PFO.

NEUROLOGY
Summary: -Infant admitted due to concern for seizure activity at RH, loaded with phenobarbital at RH at 12 HOL then transferred here for further evaluation. On

admission, infant presented with seizure like activity given an additional phenobarb and Keppra. LP obtained, see ID. Neurology consulted, recommended EEG and infectious workup. EEG with frequent sharp rhythmic discharges at C4 and T5/O1. Given additional 10 mg/kg phenobarb and continued on maintenance. HUS obtained normal. Last noted seizures was on 2/12.
-MRI (2/15) showed changes related to severe HIE involving multiple areas of right greater than left cortical/subcortical supratentroial region as the periventricular region, external and internal capsule along with the corpus callosum and associated more diffuse intrinsic T1 signal involving the bilateral cerebral cortices. Also has R cerebellar hemorrhage. Neurology rec to obtain CT (done 2/17)-->The ventricles are mildly decreased in size when compared to the previous MR, which may be related to edema associated with hypoxic ischemic injury. The right cerebellar parenchymal hematoma is unchanged).

-Epilepsy genetic workup pending.
Objective: Over the past 24 hours, The infant passed the ABR test in both ears on 2/18. No medications were given.
Plan: Continue phenobarb 7.2 mg po every 12 hours.
Continue Keppra 40mg po every 12 hours
Follow up with Child neurology in 3 month

GASTROINTESTINAL
Summary: No GI issues during hospital admission.

GENITOURINARY
Summary: Normal renal function and UOP

IMMUNIZATIONS
Summary: Hepatitis B #1 given on 2/8 at RH
Plan: Continue to follow AAP guidelines for vaccine schedule.

GENETICS, ENDOCRINE, METABOLIC
Summary: Family history of Galactosemia.
State NB metabolic screen sent at 24 hours of life, consistent with TPN. Repeat sent on 02/20 and is pending
Metabolic workup in progress due to seizures. Workup includes: Ammonia level 83, pyruvic acid (0.4 normal), serum AA elevated levels but not consistent with inherited metabolic disease, UA Organic acid and reducing substances (pending).
Epilepsy genetic work up done and is pending
Plan: Follow result of repeat NBS
Follow results of Urine organic acid and the epilepsy genetic work up.

SOCIAL
Summary: Parents were involved in infant's care and were regularly updated by Neonatal and Child neurology team.

OTHER
Summary: PCP: My Family Health Care on 02/24/22
Child Neurology with Dr. Chrusciel in 3 month after discharge. (Clinic number: 405-271-2244)

DISCHARGE EXAM (at 2/20/22 6:47)
Weight - 3590 grams (7 lb 14.6 oz) - 21%ile ; Z-score = -0.79
Length - 53.0 cm (20.9 in) - 53%ile ; Z-score = 0.08 (2/15/22)
Head circumference - 36.0 cm (14.2 in) - 51%ile ; Z-score = 0.02 (2/15/22)
Vital Signs: HR - 121, RR - 41, O2 Sat - 100%, Temp - 36.8 degrees
General: Term infant in crib, stable room air and in no acute distress. Skin pale pink, warm, and dry.
HEENT: Anterior fontanelle open, soft, and flat with sutures approximated. Eyes clear. Oral mucosa pink and moist.
Chest: Chest rise symmetrical with clear breath sounds bilaterally.
Heart: Normal sinus rhythm, normal perfusion and pulses, no murmur.
Abdomen: Soft and non-distended, non-tender with active bowel sounds.
Extremities: Moving all extremities equally.
Neuro: Active, responsive, normal tone for gestational age.

CLINICAL PROBLEMS AND FUNCTIONAL STATUS
Active Problems: Seizure disorder (identified 2/8/22)

PATIENT NAME: BLUE,BB-TATUM ACCOUNT #: E00677497957

neonatal encephalopathy (identified 2/16/22)
Resolved Problems: r/o sepsis (2/8/22-2/13/22)
respiratory distress (2/12/22-2/16/22)

Functional Status: At increased risk for neurodevelopmental delays

CURRENT MEDICATIONS
Levetiracetam (Keppra), 40 mg enterally q12h (11.1 mg/kg/dose, 22.3 mg/kg/day) started on 2/14/22
PHENObarbital, 15 mg enterally q24h (4.2 mg/kg/day) started on 2/14/22

ALLERGIES and ADVERSE REACTIONS
None.

DISCHARGE DIAGNOSES
1. 40 week AGA male

Peds - My Family Healthcare (My Family, Healthcare) - Durant office

I provided 45 minutes of care.
Discharge planning completed, patient examined, family instructed, and discharge summary created for communication of history and plan to PCP.
I provided 45 minutes of care.
