Patient: Tatum Elizabeth Blue Phillips

### AFFIDAVIT OF MEDICAL RECORDS

Before me, the undersigned Notary Public, personally appeared Deborah Forster, who, being by me duly sworn, states as follows:

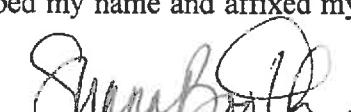

My name is Deborah Forster and I am of sound mind, capable of making this Affidavit, and personally acquainted with the facts herein stated:

I am the Custodian of Medical Records of Mercy Tishomingo (Entity), hereafter referred to as "Mercy".

Attached to this Affidavit are 151 pages(s) of the Medical record(s) provided via secure email as requested, reflecting services rendered by "Mercy" to Tatum Elizabeth Blue Phillips ("Patient Name") related to health care treatment provided to the Patient. These medical records are kept in the regular course of business wherein it was the regular course of business for a designee, employee, or representative of "Mercy" with knowledge of the act, event, condition, opinion, or diagnosis recorded to make the record or to transmit information thereof to be included in such record. The record was made at or near the time of the act, event, opinion or diagnosis. The medical records attached hereto are the original or exact duplicates of the original.

  
Deborah Forster  
AFFIANT

In witness whereof, I have hereunto subscribed my name and affixed my official seal this 30<sup>th</sup> day of May, 2025.

Procedure Orders  
1. Splint Application [228092851] ordered by Walgren, Laura A, PA

### **HISTORY OF PRESENT ILLNESS**

Tatum Blue, a 18 y.o. female presents to the ED with a Chief Complaint of Upper Extremity Injury/pain

Subjective

History provided by: **The patient and a parent**

Arrived by: **Private vehicle**

Arrived from: **Scene**

Motor Vehicle Crash

Injury location: **Shoulder/arm**

Shoulder/arm injury location: **R upper arm**

Pain details:

Quality: **Aching**

Severity: **Moderate**

Onset quality: **Sudden**

Timing: **Constant**

Progression: **Worsening**

Type of accident: **she ran into other vehicle at low rate of speed while turning left. has pain in right humerus region and where broke right thumbnail.**

Arrived directly from scene: **yes**

Patient position: **Driver's seat**

Speed of crash: **Low (1-25 MPH)**

Patient's vehicle type: **Car**

Objects struck: **Medium vehicle**

Compartment intrusion: **no**

Extrication required: **no**

Windshield: **Intact**

Steering column: **Intact**

Ejection: **None**

Airbag deployed: **no**

Restraint: **Lap/shoulder belt**

Ambulatory at scene: **yes**

Suspicion of alcohol use: **no**

Suspicion of drug use: **no**

**07/09/2020 - ED in Mercy Emergency Department Tishomingo (continued)**

**ED Provider Note (All Versions) (continued)**

Amnesic to event: **no**

Relieved by: **None tried**

Worsened by: **Change in position and movement**

Ineffective treatments: **Immobilization**

Associated symptoms: **no abdominal pain, no altered mental status, no back pain, no dizziness, no nausea, no neck pain, no shortness of breath and no vomiting**

**REVIEW OF SYSTEMS**

**Review of Systems**

Constitutional: Negative for fatigue and fever.

HENT: Negative for congestion, postnasal drip, trouble swallowing and voice change.

Eyes: Negative for visual disturbance.

Respiratory: Negative for cough, shortness of breath and wheezing.

Cardiovascular: Negative for leg swelling.

Gastrointestinal: Negative for abdominal pain, diarrhea, nausea and vomiting.

Genitourinary: Negative for flank pain.

Musculoskeletal: Positive for **myalgias**. Negative for back pain, gait problem, joint swelling and neck pain.

Skin: Negative for color change, pallor, rash and wound.

Allergic/Immunologic: Negative for immunocompromised state.

Neurological: Negative for dizziness, speech difficulty, weakness and light-headedness.

Hematological: Does not bruise/bleed easily.

Psychiatric/Behavioral: Negative for agitation, behavioral problems, confusion and sleep disturbance.

**PAST MEDICAL HISTORY REVIEWED**

**MEDICAL:**

Patient has a past medical history of Patient denies relevant medical history.

**SURGICAL:**

Patient has a past surgical history that includes tonsillectomy and adenoidectomy.

**FAMILY:**

Patient's family history is not on file.

**SOCIAL:**

reports that she has never smoked. She has never used smokeless tobacco.

No birth history on file.

**Social History**

<b>acetaminophen-codeine (TYLENOL #3) 300-30 mg tablet</b>	Take 1 Tablet by mouth every 4 hours as needed for Pain.Acute pain of humerus fractureDisp-20 Tablet,R-0

### Objective

### PHYSICAL EXAM

#### INITIAL VS

BP: 112/55 (07/09/20 1221), Heart Rate: 96 bpm (07/09/20 1221), Resp: 18 (07/09/20 1221), Pulse: 96 (07/09/20 1221), Temp: 97.7 °F (36.5 °C) (07/09/20 1221), Temp src: Oral (07/09/20 1221), SpO2: 95 % (07/09/20 1221), Height: 5' 2" (157.5 cm) (07/09/20 1221), Weight: 81.6 kg (180 lb) (07/09/20 1221), BMI (Calculated): 32.91 (07/09/20 1221) No LMP recorded.

#### Physical Exam

Vitals signs and nursing note reviewed.

#### Constitutional:

General: She is not in acute distress.

Appearance: She is well-developed. She is not toxic-appearing.

#### HENT:

Head: Normocephalic and atraumatic.

Right Ear: External ear normal.

Left Ear: External ear normal.

#### Mouth/Throat:

Pharynx: No oropharyngeal exudate.

#### Eyes:

Conjunctiva/sclera: Conjunctivae normal.

Pupils: Pupils are equal, round, and reactive to light.

#### Neck:

Musculoskeletal: Normal range of motion and neck supple.

#### Cardiovascular:

Rate and Rhythm: Normal rate and regular rhythm.

Heart sounds: Normal heart sounds. No murmur. No friction rub. No gallop.

#### Pulmonary:

Effort: Pulmonary effort is normal. No respiratory distress.

## 07/09/2020 - ED in Mercy Emergency Department Tishomingo (continued)

### ED Provider Note (All Versions) (continued)

Breath sounds: Normal breath sounds. No wheezing or rales.

#### Chest:

Chest wall: No tenderness.

#### Abdominal:

General: Bowel sounds are normal.

Palpations: Abdomen is soft.

Tenderness: There is no abdominal tenderness. There is no guarding or rebound.

#### Musculoskeletal:

General: **Tenderness** present. No swelling, deformity or signs of injury.

Right lower leg: No edema.

Left lower leg: No edema.

Comments: **No vertebral tenderness with palpation**

#### Skin:

General: Skin is warm and dry.

Findings: No erythema or rash.

Comments: **Partial nail avulsion distal end right thumb**

#### Neurological:

Mental Status: She is alert and oriented to person, place, and time.

Cranial Nerves: No cranial nerve deficit.

Motor: No weakness.

Coordination: Coordination normal.

#### Psychiatric:

Mood and Affect: Mood normal.

Behavior: Behavior normal.

Thought Content: Thought content normal.

Judgment: Judgment normal.

## DIAGNOSTICS

### LAB:

No data to display

### RADIOLOGY:

XR HUMERUS 2+ VW RIGHT

#### Radiologist Impression

Comminuted fracture of the distal diaphysis of the right humerus with an approximate 2.5 cm bayonet apposition of the fracture fragments.

XR HUMERUS 2+ VW RIGHT

### EKG:

## MEDICAL DECISION MAKING AND PLAN OF CARE

### MDM

Summary Statement:

**Rechecked for neuro intact prior to and following splinting. Discussed with pt and mother at bedside and s/s to watch for regarding change**

**I have counseled the patient regarding their exam and/or work up.**

**I have discussed their diagnosis and the need for follow up outside of the ER.**

**I have explained that the ER is a place for emergencies and that everyone needs outpatient follow up.**

**The patient is to return for any worsening or persisting problems.**

**I have attempted to answer all of their questions, but they do need a primary care physician for complete care and evaluation.**

**I have asked them to return immediately for any questions, concerns, or problems.**

**The patient/family has verbalized understanding of plan and to return to nearest emergency room with further problems.**

**They are capable of understanding this information and making decisions about their healthcare.**

**They are discharged in safe and stable condition.**

**07/09/2020 - ED in Mercy Emergency Department Tishomingo (continued)**

**ED Provider Note (All Versions) (continued)**

Splinted with posterior/tong splint, however continues with too much movement and posterior splint applied. Pt felt less pain with application of first splint over posterior splint and sling so applied and notified her if rubbing by tomorrow she can remove top layer of splint.

Pt to contact Dr Cummings office and they will see her in office to discuss possibility of needing surgery.

**Medications Administered During the ED Stay from 07/09/2020 1219 to 07/09/2020 1701**

Date/Time	Order	Dose	Route	Action
07/09/2020 1239	<b>Neomycin-Bacitracin Zn-Polymyxin (NEOSPORIN) topical ointment 1 Packet</b>	1 Packe t	Topic al	Given
07/09/2020 1252	<b>HYDROcodone-acetaminophen (NORCO) 5-325 mg per tablet 1 Tablet</b>	1 Tablet	Oral Tablet	Given

Editor: Walgren, Laura A, PA (Physician Assistant)

Ice area of pain for 20 minutes at a time.

Follow up with orthopedic of choice.

Wear splint and sling at all times until follow up.

No driving on prescribed pain medication. Take medication only as directed. No alcohol while on prescribed medication. I recommend that you do not make any major decisions such as signing legal documents while taking pain medication as pain medication may slow your reaction time and thought processes.

## 07/09/2020 - ED in Mercy Emergency Department Tishomingo (continued)

### Imaging (All Results) (continued)

Was the patient's LMP within the last 28 days? Yes

What was the date of the patient's last menstrual period?

Comments

### End Exam Questions

	Answer	Comment
Was the patient shielded?	Yes	
Was the patient able to ambulate independently?		
Was a patient transfer, lift, or immobilization device used?		
What device was used?		
If no device was used, why not?		
Was this exam CR only?	Yes	

### XR HUMERUS 2+ VW RIGHT [228092846]

Resulted: 07/09/20 1257, Result status: Final result

Ordering provider: Walgren, Laura A, PA 07/09/20 1223  
Resulted by: Harding, Michael Oconnor, DO

Order status: Completed  
Filed by: Interface, Som Aok Incoming Radiology Results  
07/09/20 1257

Performed: 07/09/20 1235 - 07/09/20 1250  
Resulting lab: INTERFACE SYSTEM

Accession number: TM6916719

Narrative:

RIGHT HUMERUS SERIES:

HISTORY: Right arm pain. Traumatic. Motor vehicle accident.

COMPARISON: No prior examination for comparison.

FINDINGS: AP and lateral views of the right humerus are present.

There is a comminuted fracture pattern of the distal diaphysis of the right humerus with an approximate 2.5 cm bayonet apposition. The right shoulder and elbow joints are grossly intact. There is no evidence of radiopaque foreign body or subcutaneous emphysema.

Impression:

Comminuted fracture of the distal diaphysis of the right humerus with an approximate 2.5 cm bayonet apposition of the fracture fragments.

## Learning About Opioids

### Introduction

Opioids are medicines used to relieve moderate to severe pain. They may be used for a short time for pain, such as after surgery. Or in some cases a doctor might prescribe them for long-term pain. They don't cure a health problem. But they help you manage the pain.

Opioids relieve pain by changing the way your body feels pain and the way you feel about pain.

Sometimes opioids are used for people who can't take other pain medicines. They may be prescribed if you have heart, kidney, or liver problems. For instance, you may take an opioid instead of nonsteroidal anti-inflammatory drugs (NSAIDs). NSAIDs include ibuprofen (Advil, Motrin) and naproxen (Aleve).

Opioids are strong medicines. They can help you manage pain when you use them the right way. But if you misuse them, they can cause serious harm and even death.

If you decide to take opioids, here are some things to remember.

- **Keep your doctor informed.** You can develop opioid use disorder. Moderate to severe opioid use disorder is sometimes called addiction. The risk is higher if you have a history of substance use. Your doctor will monitor you closely for signs of opioid use disorder and to figure out when you no longer need to take opioids.
- **Make a treatment plan.** The goal of your plan is to be able to function and do the things you need to do, even if you still have some pain. You might be able to manage your pain with other non-opioid options like physical therapy, relaxation, or over-the-counter pain medicines.
- **Be aware of the side effects.** Opioids can cause serious side effects, such as constipation, dry mouth, and nausea. And over time, you may need a higher dose to get pain relief. This is called tolerance. Your body also gets used to opioids. This is called physical dependence. If you suddenly stop taking them, you may have withdrawal symptoms.

### Examples

Opioids or other medicines that contain them include:

- Codeine (Tylenol 3).

### After Visit Summary (continued)

Blue, Tatum (MR # E1504043398) DOB: 07/25/2001

TISHED-50966ED02-ED02

- Hydrocodone (Norco).
- Oxycodone (OxyContin, Percocet).

### Safety tips

If you need to take opioids to manage your pain, remember these safety tips.

- **Follow directions carefully.** It's easy to misuse opioids if you take a dose other than what's prescribed by your doctor. This can lead to overdose and even death. Even sharing them with someone they weren't meant for is misuse.
- **Be cautious.** Opioids may affect your judgment and decision making. Do not drive or operate machinery until you can think clearly. Talk with your doctor about when it is safe to drive.
- **Reduce the risk of drug interactions.** Opioids can be dangerous if you take them with alcohol or with certain drugs like sleeping pills and muscle relaxers. Make sure your doctor knows about all the other medicines you take, including over-the-counter medicines. Don't start any new medicines before you talk to your doctor or pharmacist.
- **Safely store and dispose of opioids.** Store opioids in a safe and secure place. Make sure that pets, children, friends, and family can't get to them. When you're done using opioids, make sure to dispose of them safely and as quickly as possible. The U.S. Food and Drug Administration (FDA) recommends these disposal options.
  - The best option is to take your medicine to a drop-off box or take-back program that is authorized by the U.S. Drug Enforcement Administration (DEA).
  - If these programs aren't available in your area and your medicine doesn't have specific disposal instructions (such as flushing), you can throw them into your household trash if you follow the FDA's instructions. Visit [fda.gov](http://fda.gov) and search for "unused medicine disposal."
  - If you have opioid patches (used or unused), your options are to take them to a DEA-authorized site or flush them down the toilet. Do not throw them in the trash.
  - **Only** flush your medicine down the toilet if you can't get to a DEA-approved site or your medicine instructions state clearly to flush them.
- **Reduce the risk of overdose.** Misuse of opioids can be very dangerous. Protect yourself by asking your doctor about a naloxone rescue kit. It can help you—and even save your life—if you take too much of an opioid.

### Who is most at risk?

Your risk rises if you misuse opioids, take high doses, have certain health problems, or if you've overdosed before. You're also at higher risk if you use them with another substance or take illegal opioids, or if you used them regularly and then take them again after you'd cut back or stopped.

### When should you call for help?

**Call 911** anytime you think you may need emergency care. For example, call if:

- You have symptoms of a severe allergic reaction. These may include:
  - Sudden raised, red areas (hives) all over your body.
  - Swelling of the throat, mouth, lips, or tongue.
  - Trouble breathing.
  - Passing out (losing consciousness). Or you may feel very lightheaded or suddenly feel weak, confused, or restless.
- You have signs of an overdose. These include:
  - Cold, clammy skin.
  - Confusion.
  - Severe nervousness or restlessness.
  - Severe dizziness, drowsiness, or weakness.

## 07/09/2020 - ED in Mercy Emergency Department Tishomingo (continued)

### After Visit Summary (continued)

Blue, Tatum (MR # E1504043398) DOB: 07/25/2001

TISHED-50966ED02-ED02

- Slow breathing.
- Seizures.

**Call your doctor now or seek immediate medical care if:**

- You have symptoms of an allergic reaction, such as:
  - A rash or hives (raised, red areas on the skin).
  - Itching.
  - Swelling.
  - Belly pain, nausea, or vomiting.

Watch closely for changes in your health, and be sure to contact your doctor if:

- You think you might be taking too much pain medicine, and you need help to take less or stop.
- Your medicine is not helping with the pain.
- You are having side effects, such as constipation.

MERCY HOSPITAL TISHOMINGO  
1000 S. BYRD ST.  
TISHOMINGO, OK 73460  
Request and Consent for Diagnostic Imaging Procedure(s) Regarding Pregnancy  
This form needs to be completed for any female age 12-50.

NAME: Blue, Tatum DOB 7/25/01

Date 7.9.20 Time 1230

The exam your doctor has ordered uses ionizing radiation which can have a severe health effect during pregnancy in the first trimester. To help prevent the accidental irradiation of an unrecognized pregnancy, and in accordance with national standards, we require the following information from female patients of childbearing age. If there is even the remote possibility of pregnancy, your provider will be asked to order a urine pregnancy test prior to any imaging.

Please check any of the following that apply:

1 mo 1 week

I am/may be pregnant.

I have had a tubal ligation and/or hysterectomy.

BB3 I am currently menstruating or have had a menstrual cycle in the last 28 days.

Other: \_\_\_\_\_

HCG Performed? Y or N Result \_\_\_\_\_

I hereby state that I have been fully informed of the risks associated with the procedure that my provider has ordered and that all my questions have been answered in a language that I understand. I agree to have this radiology study performed.

Patient Signature: YB/3

Parent / Caregiver Signature: \_\_\_\_\_

Relationship to Patient: Father

Witness Signature: ABastone

### HISTORY OF PRESENT ILLNESS

Tatum Blue, a 16 y.o. female presents to the ED with a Chief Complaint of Palpitations

Subjective

History provided by: **The patient, a relative and a parent**

Arrived by: **Private vehicle**

Arrived from: **Home**

Palpitations

Palpitations quality: **Regular**

Onset quality: **Sudden**

Timing: **Constant**

Progression: **Resolved**

Chronicity: **New**

Context comment: **At rest. started on amoxicillin today for ear infection at milburn clinic**

Relieved by: **None tried**

Worsened by: **Nothing tried**

Ineffective treatments: **None tried**

Associated symptoms: **dizziness and nausea**

Associated symptoms: **no chest pain, no chest pressure, no cough, no diaphoresis, no hemoptysis, no leg pain, no lower extremity edema, no malaise/fatigue, no near-syncope, no numbness, no orthopnea, no shortness of breath (when it occurred), no syncope, no vomiting and no weakness**

Risk factors: **no diabetes mellitus, no hx of PE, no hx of thyroid disease, no hyperthyroidism and no stress**

## 11/27/2017 - ED in Mercy Emergency Department Tishomingo (continued)

## 11/27/2017 - ED in Mercy Emergency Department Tishomingo (continued)

### ED Provider Note (All Versions) (continued)

BP: (**I**) 156/93 (11/27/17 2226), Heart Rate: 84 bpm (11/27/17 2226), Resp: (**I**) 19 (11/27/17 2226), Temp: 98.6 °F (37 °C) (11/27/17 2226), Temp src: Oral (11/27/17 2226), SpO2: 100 % (11/27/17 2226), Height: 62" (157.5 cm) (11/27/17 2226), Weight: 63.5 kg (140 lb) (11/27/17 2226), BMI (Calculated): 25.6 (11/27/17 2226) Patient's last menstrual period was 11/20/2017.

### Physical Exam

Constitutional: She is oriented to person, place, and time. She appears well-developed and well-nourished.

#### **Orthostatic vs supine 143/76, 85**

**Sitting 143/86 100**

**Standing 119/94, 121**

#### HENT:

Head: Normocephalic and atraumatic.

Right Ear: External ear normal.

Left Ear: External ear normal.

Mouth/Throat: No oropharyngeal exudate.

#### **Dull tm bilateral with purulent fluid behind, canal clear**

Eyes: Conjunctivae and EOM are normal. Pupils are equal, round, and reactive to light.

Neck: Normal range of motion. Neck supple.

Cardiovascular: Normal rate, regular rhythm and normal heart sounds. Exam reveals no gallop and no friction rub.

No murmur heard.

Pulmonary/Chest: Effort normal and breath sounds normal. No respiratory distress. She has no wheezes. She has no rales. She exhibits no tenderness.

Abdominal: Soft. Bowel sounds are normal. There is no tenderness. There is no rebound and no guarding.

Musculoskeletal: Normal range of motion. She exhibits no edema.

Neurological: She is alert and oriented to person, place, and time. No cranial nerve deficit. She exhibits normal muscle tone. Coordination normal.

#### **No focal neuro deficit**

Skin: Skin is warm and dry. No rash noted. No erythema.

Psychiatric: She has a normal mood and affect. Her behavior is normal. Judgment and thought content normal.

Nursing note and vitals reviewed.

## DIAGNOSTICS

**EKG:**

#### **PROCEDURES**

Procedures

#### **MEDICAL DECISION MAKING AND PLAN OF CARE**

ED Course

#### **MDM**

Summary Statement:

**Expect clinical dehydration due to orthostatic hypotension.**

**Return to ED if worsening s/s. Complete antibiotics for URI s/s that have been going on for 2 weeks now with postnasal drainage.**

I have counseled the patient regarding their exam and/or work up.

I have discussed their diagnosis and the need for follow up outside of the ER.

I have explained that the ER is a place for emergencies and that everyone needs outpatient follow up.

The patient is to return for any worsening or persisting problems.

I have attempted to answer all of their questions, but of course they need a primary care physician for complete care and evaluation.

I have asked them to return immediately for any questions, concerns, or problems.

The patient agree with plan and to return to nearest emergency room with further problems.

They are capable of understanding this information and making decisions about their healthcare.

They are discharged in safe and stable condition.

Editor: Walgren, Laura A, PA (Physician Assistant)

Return to emergency room if worsening symptoms

Increase water intake

Increase gatorade to stay hydrated

Make sure to continue antibiotics until completely gone, even if you are feeling better before course of antibiotics is completed. Completing your antibiotics makes sure that all the bacteria we are trying to kill is gone, and it helps to prevent resistance of bacteria in this area to antibiotics so that when we use antibiotics next time, it continues to work for that type of infection for both you and for other people.

### After Visit Summary (continued)

#### AFTER VISIT SUMMARY

Tatum Blue DoB: 7/25/2001

11/27/2017 Mercy Emergency Department Tishomingo 580-371-2327

#### Instructions

Return to emergency room if worsening symptoms  
Increase water intake  
Increase gatorade to stay hydrated  
Make sure to continue antibiotics until completely gone, even if you are feeling better before course of antibiotics is completed. Completing your antibiotics makes sure that all the bacteria we are trying to kill is gone, and it helps to prevent resistance of bacteria in this area to antibiotics so that when we use antibiotics next time, it continues to work for that type of infection for both you and for other people.

### After Visit Summary (continued)

#### Disclaimer

**Important:** You were examined and treated today on an emergency basis. This was not a substitute for, nor an effort to provide, complete and ongoing medical care.

On arrival to the Emergency Department, your home medications were reviewed with you by the Emergency Department staff. Any new medications or changes to your existing medications are noted in these instructions. You should follow up with your primary care and specialty physicians as directed for ongoing medication management.

Some lab or x-ray results may be pending when you leave the Emergency Department. Please be sure that the phone number you provided to Registration is accurate so that we can contact you with these results.

You should contact the Emergency Department, or your physician for questions. Follow up as directed in your discharge/follow up instructions or return to the Emergency Department for any new, persistent, or worsening symptoms.

---

Thank you for choosing Mercy. In the near future, you may be invited to take a survey about your experience with us. It will be conducted either by email or a telephone call by a company called Professional Research Consultants (PRC), on behalf of Mercy. We hope you will take time to share your feedback and help us continually improve our services.

ORTHOSTATIC HYPOTENSION (ENGLISH)

### Healthwise, Inc.

## Orthostatic Hypotension: Care Instructions

### Your Care Instructions

Orthostatic hypotension is a quick drop in blood pressure. It happens when you get up from sitting or lying down. You may feel faint, lightheaded, or dizzy.

When a person sits up or stands up, the body changes the way it pumps blood. This can slow the flow of blood to the brain for a very short time. And that can make you feel lightheaded.

Many medicines can cause this problem, especially in older people. Lack of fluids (dehydration) or illnesses such as diabetes or heart disease also can cause it.

**Follow-up care is a key part of your treatment and safety.** Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

### How can you care for yourself at home?

- Tell your doctor about any problems you have with your medicines.
- If your doctor prescribes medicine to help prevent a low blood pressure problem, take it exactly as prescribed. Call your doctor if you think you are having a problem with your medicine.
- Drink plenty of fluids, enough so that your urine is light yellow or clear like water. Choose water and other caffeine-free clear liquids. If you have kidney, heart, or liver disease and have to limit fluids, talk with your doctor before you increase the amount of fluids you drink.
- Limit or avoid alcohol and caffeine.
- Get up slowly from bed or after sitting for a long time. If you are in bed, roll to your side and swing your legs over the edge of the bed and onto the floor. Push your body up to a sitting position. Wait for a while before you slowly stand up. If you are dizzy or lightheaded, sit or lie down.

### When should you call for help?

Call 911 anytime you think you may need emergency care. For example, call if:

- You passed out (lost consciousness).

Watch closely for changes in your health, and be sure to contact your doctor if:

- You do not get better as expected.

### Where can you learn more?

ORAL REHYDRATION (ENGLISH)

### Healthwise, Inc.

### Oral Rehydration: Care Instructions

#### Your Care Instructions

Dehydration occurs when your body loses too much water. This can happen if you do not drink enough fluids or lose a lot of fluid due to diarrhea, vomiting, or sweating. Being dehydrated can cause health problems and can even be life-threatening.

To replace lost fluids, you need to drink liquid that contains special chemicals called electrolytes. Electrolytes keep your body working well. Plain water does not have electrolytes. You also need to rest to prevent more fluid loss. Replacing water and electrolytes (oral rehydration) completely takes about 36 hours. But you should feel better within a few hours.

**Follow-up care is a key part of your treatment and safety.** Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

#### How can you care for yourself at home?

- Take frequent sips of a drink such as Gatorade, Powerade, or other rehydration drinks that your doctor suggests. These replace both fluid and important chemicals (electrolytes) you need for balance in your blood.
- Drink 2 quarts of cool liquid over 2 to 4 hours. You should have at least 10 glasses of liquid a day to replace lost fluid. If you have kidney, heart, or liver disease and have to limit fluids, talk with your doctor before you increase the amount of fluids you drink.
- Make your own drink. Measure everything carefully. The drink may not work well or may even be harmful if the amounts are off.
  - 1 quart water
  - ½ teaspoon salt
  - 6 teaspoons sugar
- Do not drink liquid with caffeine, such as coffee and colas.
- Do not drink any alcohol. It can make you dehydrated.
- Drink plenty of fluids, enough so that your urine is light yellow or clear like water. If you have kidney, heart, or liver disease and have to limit fluids, talk with your doctor before you increase the amount of fluids you drink.

#### When should you call for help?

Call 911 anytime you think you may need emergency care. For example, call if:

- You have signs of severe dehydration, such as:
  - You are confused or unable to stay awake.
  - You passed out (lost consciousness).

Call your doctor now or seek immediate medical care if:

- You still have signs of dehydration. You have sunken eyes and a dry mouth, and you pass only a little dark urine.
- You are dizzy or lightheaded, or you feel like you may faint.
- You are not able to keep down fluids.

Tatum Blue DoB: 7/25/2001

11/27/2017

Mercy Emergency Department Tishomingo 580-371-2327

#### Instructions

Return to emergency room if worsening symptoms  
Increase water intake  
Increase gatorade to stay hydrated  
Make sure to continue antibiotics until completely gone, even if you are feeling better before course of antibiotics is completed. Completing your antibiotics makes sure that all the bacteria we are trying to kill is gone, and it helps to prevent resistance of bacteria in this area to antibiotics so that when we use antibiotics next time, it continues to work for that type of infection for both you and for other people.

### After Visit Summary (continued)

#### Disclaimer

**Important:** You were examined and treated today on an emergency basis. This was not a substitute for, nor an effort to provide, complete and ongoing medical care.

On arrival to the Emergency Department, your home medications were reviewed with you by the Emergency Department staff. Any new medications or changes to your existing medications are noted in these instructions. You should follow up with your primary care and specialty physicians as directed for ongoing medication management.

Some lab or x-ray results may be pending when you leave the Emergency Department. Please be sure that the phone number you provided to Registration is accurate so that we can contact you with these results.

You should contact the Emergency Department, or your physician for questions. Follow up as directed in your discharge/follow up instructions or return to the Emergency Department for any new, persistent, or worsening symptoms.

---

Thank you for choosing Mercy. In the near future, you may be invited to take a survey about your experience with us. It will be conducted either by email or a telephone call by a company called Professional Research Consultants (PRC), on behalf of Mercy. We hope you will take time to share your feedback and help us continually improve our services.

ORTHOSTATIC HYPOTENSION (ENGLISH)

### Healthwise, Inc.

## Orthostatic Hypotension: Care Instructions

### Your Care Instructions

Orthostatic hypotension is a quick drop in blood pressure. It happens when you get up from sitting or lying down. You may feel faint, lightheaded, or dizzy.

When a person sits up or stands up, the body changes the way it pumps blood. This can slow the flow of blood to the brain for a very short time. And that can make you feel lightheaded.

Many medicines can cause this problem, especially in older people. Lack of fluids (dehydration) or illnesses such as diabetes or heart disease also can cause it.

**Follow-up care is a key part of your treatment and safety.** Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

### How can you care for yourself at home?

- Tell your doctor about any problems you have with your medicines.
- If your doctor prescribes medicine to help prevent a low blood pressure problem, take it exactly as prescribed. Call your doctor if you think you are having a problem with your medicine.
- Drink plenty of fluids, enough so that your urine is light yellow or clear like water. Choose water and other caffeine-free clear liquids. If you have kidney, heart, or liver disease and have to limit fluids, talk with your doctor before you increase the amount of fluids you drink.
- Limit or avoid alcohol and caffeine.
- Get up slowly from bed or after sitting for a long time. If you are in bed, roll to your side and swing your legs over the edge of the bed and onto the floor. Push your body up to a sitting position. Wait for a while before you slowly stand up. If you are dizzy or lightheaded, sit or lie down.

### When should you call for help?

Call 911 anytime you think you may need emergency care. For example, call if:

- You passed out (lost consciousness).

Watch closely for changes in your health, and be sure to contact your doctor if:

- You do not get better as expected.

ORAL REHYDRATION (ENGLISH)

### Healthwise, Inc.

### Oral Rehydration: Care Instructions

#### Your Care Instructions

Dehydration occurs when your body loses too much water. This can happen if you do not drink enough fluids or lose a lot of fluid due to diarrhea, vomiting, or sweating. Being dehydrated can cause health problems and can even be life-threatening.

To replace lost fluids, you need to drink liquid that contains special chemicals called electrolytes. Electrolytes keep your body working well. Plain water does not have electrolytes. You also need to rest to prevent more fluid loss. Replacing water and electrolytes (oral rehydration) completely takes about 36 hours. But you should feel better within a few hours.

**Follow-up care is a key part of your treatment and safety.** Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

#### How can you care for yourself at home?

- Take frequent sips of a drink such as Gatorade, Powerade, or other rehydration drinks that your doctor suggests. These replace both fluid and important chemicals (electrolytes) you need for balance in your blood.
- Drink 2 quarts of cool liquid over 2 to 4 hours. You should have at least 10 glasses of liquid a day to replace lost fluid. If you have kidney, heart, or liver disease and have to limit fluids, talk with your doctor before you increase the amount of fluids you drink.
- Make your own drink. Measure everything carefully. The drink may not work well or may even be harmful if the amounts are off.
  - 1 quart water
  - ½ teaspoon salt
  - 6 teaspoons sugar
- Do not drink liquid with caffeine, such as coffee and colas.
- Do not drink any alcohol. It can make you dehydrated.
- Drink plenty of fluids, enough so that your urine is light yellow or clear like water. If you have kidney, heart, or liver disease and have to limit fluids, talk with your doctor before you increase the amount of fluids you drink.

#### When should you call for help?

Call 911 anytime you think you may need emergency care. For example, call if:

- You have signs of severe dehydration, such as:
  - You are confused or unable to stay awake.
  - You passed out (lost consciousness).

Call your doctor now or seek immediate medical care if:

- You still have signs of dehydration. You have sunken eyes and a dry mouth, and you pass only a little dark urine.

### HISTORY OF PRESENT ILLNESS

Tatum Blue, a 21 y.o. female presents to the ED with a Chief Complaint of Dizziness

Subjective

This patient is a pleasant 21 y.o. female who presents to the Mercy Hospital Tishomingo ED, via POV, with the CC of dizziness and headache, this began approx 2 hours ago, both have improved, she is currently 13 weeks preg, hx of HTN and eclampsia with previous pregnancy, no complications to this point with current. No other symptoms

History provided by: **The patient**

Language interpreter used: **No**

Arrived by: **Private vehicle**

Arrived from: **Home**

#### Dizziness

Quality: **Lightheadedness**

Severity: **Moderate**

Onset quality: **Sudden**

Duration: **2 hours**

Timing: **Constant**

Progression: **Resolved**

Chronicity: **New**

Ineffective treatments: **None tried**

Associated symptoms: **headaches**

Associated symptoms: **no diarrhea, no nausea, no shortness of breath, no vision changes, no vomiting and no weakness**

### REVIEW OF SYSTEMS

Review of Systems

Constitutional: Negative for fever.

## 04/11/2023 - ED in Mercy Emergency Department Tishomingo (continued)

### ED Provider Note (All Versions) (continued)

Respiratory: Negative for cough, choking, shortness of breath and wheezing.

Gastrointestinal: Negative for diarrhea, nausea and vomiting.

Genitourinary: Negative for difficulty urinating, dysuria, urgency, vaginal bleeding and vaginal pain.

Skin: Negative for rash.

Neurological: Positive for **dizziness** and **headaches**. Negative for speech difficulty and weakness.

Psychiatric/Behavioral: Negative for confusion.

### PAST MEDICAL HISTORY REVIEWED

#### **MEDICAL:**

Patient has a past medical history of Latex sensitivity and Patient denies relevant medical history.

She has no past medical history of Chest pain, History of complications due to general anesthesia, Injury of back, Injury of neck, Malignant hyperthermia, Motion sickness, Obstructive sleep apnea, Post-operative nausea and vomiting, or Pseudocholinesterase deficiency.

#### **SURGICAL:**

Patient has a past surgical history that includes tonsillectomy (2016); pr optx humeral shft fx w/plate/screws w/wocerclage (Right, 7/16/2020); foot surgery (Left, 2015); and adenoidectomy.

#### **FAMILY:**

Patient's family history includes Healthy in her father and mother; Other in her mother.

#### **SOCIAL:**

reports that she has never smoked. She has never used smokeless tobacco. She reports current alcohol use. She reports that she does not use drugs.

No birth history on file.

BP: 130/76 (04/11/23 1906), Heart Rate: 96 bpm (04/11/23 1906), Resp: 18 (04/11/23 1906), Pulse: 96 (04/11/23 1906), Temp: 98.6 °F (37 °C) (04/11/23 1906), Temp src: Oral (04/11/23 1906), SpO2: 97 % (04/11/23 1906), Height: 5' 1" (154.9 cm) (04/11/23 1906), Weight: 89.4 kg (197 lb) (04/11/23 1906), BMI (Calculated): **(!) 37.24** (04/11/23 1906) Patient's last menstrual period was 01/15/2023.

#### Physical Exam

##### Constitutional:

General: She is not in acute distress.

Appearance: She is well-developed.

##### HENT:

Head: Normocephalic and atraumatic.

##### Mouth/Throat:

Mouth: Mucous membranes are moist.

##### Eyes:

Pupils: Pupils are equal, round, and reactive to light.

##### Cardiovascular:

Rate and Rhythm: Normal rate and regular rhythm.

Heart sounds: Normal heart sounds.

##### Pulmonary:

Effort: Pulmonary effort is normal. No respiratory distress.

Breath sounds: Normal breath sounds. No wheezing or rales.

##### Abdominal:

General: Bowel sounds are normal.

Palpations: Abdomen is soft.

##### Musculoskeletal:

General: Normal range of motion.

Cervical back: Neck supple.

##### Lymphadenopathy:

Cervical: No cervical adenopathy.

##### Skin:

General: Skin is warm and dry.

##### Neurological:

Mental Status: She is alert and oriented to person, place, and time.

##### Psychiatric:

Mood and Affect: Mood normal.

Behavior: Behavior normal.

Thought Content: Thought content normal.

Judgment: Judgment normal.

Editor: Saltiel, Steven E, NP (Nurse Practitioner)		

Drink plenty of fluids

Monitor your blood pressure at home

Follow up with OB tomorrow

Follow the aftercare instructions for additional instructions and when to seek additional medical attention.

We have reviewed your diagnosis with you as well as any lab work or exams performed and hopefully have answered any questions you have to your understanding. You have been provided with handouts on your current diagnosis or conditions. Please read these thoroughly.

The ER is a place for emergencies and everyone needs outpatient follow up, regardless of the diagnosis. I have attempted to answer all of your questions, but of course you need a primary care provider for complete care and evaluation.

If you have been provided with prescriptions associated with your visit to the Emergency Department, please make sure that your pharmacist has a complete list of all the medications you are taking, to include over-the-counter medications and supplements. Please direct any questions you have regarding these medication, side effects and interactions to your pharmacist.

If you have any questions, concerns, or problems that you feel can not wait until you are able to follow up with your primary care provider, then return immediately to the Emergency Department.

Electronically signed by Saltiel, Steven E, NP at 4/11/2023 8:43 PM

ED After Visit Summary (below)

**AFTER VISIT SUMMARY**

Tatum Blue DoB: 7/25/2001

4/11/2023 Mercy Emergency Department Tishomingo 580-371-2327

**Instructions**

Drink plenty of fluids

Monitor your blood pressure at home

Follow up with OB tomorrow

Follow the aftercare instructions for additional instructions and when to seek additional medical attention.

We have reviewed your diagnosis with you as well as any lab work or exams performed and hopefully have answered any questions you have to your understanding. You have been provided with handouts on your current diagnosis or conditions. Please read these thoroughly.

The ER is a place for emergencies and everyone needs outpatient follow up, regardless of the diagnosis. I have attempted to answer all of your questions, but of course you need a primary care provider for complete care and evaluation.

If you have been provided with prescriptions associated with your visit to the Emergency Department, please make sure that your pharmacist has a complete list of all the medications you are taking, to include over-the-counter medications and supplements. Please direct any questions you have regarding these medication, side effects and interactions to your pharmacist.

If you have any questions, concerns, or problems that you feel can not wait until you are able to follow up with your primary care provider, then return immediately to the Emergency Department.

#### Disclaimer

##### Important:

You were examined and treated today on an emergency basis. On arrival to the Emergency Department, your home medications were reviewed with you by the Emergency Department staff. Any new medications or changes to your existing medications are noted in these instructions. You should follow up with your primary care and specialty physicians as directed for ongoing medication management.

Some lab or x-ray results may be pending when you leave the Emergency Department. Please be sure that the phone number you provided to Registration is accurate so that we can contact you with these results.

You should contact the Emergency Department, or your physician for questions. Follow up as directed in your discharge instructions/After Visit Summary or return to the Emergency Department for any new, persistent, or worsening symptoms.

The treatment you received today was not a substitute for, nor an effort to provide, complete and ongoing medical care. If you don't have a primary care provider, you can establish care with a Mercy primary care provider near you at [mercy.net/followup](http://mercy.net/followup).

#### Mercy on Call is Available to Currently Established Mercy Primary Care Patients

**Not sure where to go for medical help after hours?** If you're a Mercy adult primary care patient, you have access to Mercy on Call, an on-demand care team available 24/7. Mercy on Call's physician-led care team can provide you with real-time guidance and support, so you'll get the best medical advice for your condition right when you need it. You can reach Mercy on Call by phoning your primary care provider's office after hours.

---

Thank you for choosing Mercy, it has been a privilege to serve you! Our team is called to provide compassionate care and exceptional service. You may be invited to participate in a survey about your experience. Your time and voice are valued; we hope you will take the time to help us recognize areas of excellence and focus on opportunities to improve.

---

#### Changes to Your Medication List

You have not been prescribed any medications.

### After Visit Summary (continued)

 Attached Information

Dizziness (English)

## Dizziness: Care Instructions

### Overview

Dizziness is the feeling of unsteadiness or fuzziness in your head. It is different than having vertigo, which is a feeling that the room is spinning or that you are moving or falling. It is also different from lightheadedness, which is the feeling that you are about to faint.

It can be hard to know what causes dizziness. Some people feel dizzy when they have migraine headaches. Sometimes bouts of flu can make you feel dizzy. Some medical conditions, such as heart problems or high blood pressure, can make you feel dizzy. Many medicines can cause dizziness, including medicines for high blood pressure, pain, or anxiety.

If a medicine causes your symptoms, your doctor may recommend that you stop or change the medicine. If it is a problem with your heart, you may need medicine to help your heart work better. If there is no clear reason for your symptoms, your doctor may suggest watching and waiting for a while to see if the dizziness goes away on its own.

**Follow-up care is a key part of your treatment and safety.** Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

### How can you care for yourself at home?

- If your doctor recommends or prescribes medicine, take it exactly as directed. Call your doctor if you think you are having a problem with your medicine.
- Do not drive while you feel dizzy.
- Try to prevent falls. Steps you can take include:
  - Using nonskid mats, adding grab bars near the tub, and using night-lights.
  - Clearing your home so that walkways are free of anything you might trip on.
  - Letting family and friends know that you have been feeling dizzy. This will help them know how to help you.

### When should you call for help?

Call 911 anytime you think you may need emergency care. For example, call if:

- You passed out (lost consciousness).
- You have sudden dizziness that doesn't get better.
- You have dizziness along with symptoms of a heart attack. These may include:
  - Chest pain or pressure, or a strange feeling in the chest.
  - Sweating.
  - Shortness of breath.
  - Nausea or vomiting.

## 04/11/2023 - ED in Mercy Emergency Department Tishomingo (continued)

### After Visit Summary (continued)

- Pain, pressure, or a strange feeling in the back, neck, jaw, or upper belly or in one or both shoulders or arms.
- Lightheadedness or sudden weakness.
- A fast or irregular heartbeat.
- You have symptoms of a stroke. These may include:
  - Sudden numbness, tingling, weakness, or loss of movement in your face, arm, or leg, especially on only one side of your body.
  - Sudden vision changes.
  - Sudden trouble speaking.
  - Sudden confusion or trouble understanding simple statements.
  - Sudden problems with walking or balance.
  - A sudden, severe headache that is different from past headaches.

**Call your doctor now or seek immediate medical care if:**

- You feel dizzy and have a fever, headache, or ringing in your ears.
- You have new or increased nausea and vomiting.
- Your dizziness does not go away or comes back.

Watch closely for changes in your health, and be sure to contact your doctor if:

- You do not get better as expected.
